FORM 40-F

(Check One)

o **Registration statement pursuant to Section 12 of the Securities Exchange Act of 1934**

or

x **Annual report pursuant to Section 13(a) or 15(d) of the Securities Exchange Act of 1934**

For the fiscal year ended December 31, 2023 Commission file number: 001-35783

ALAMOS GOLD INC.

(Exact name of registrant as specified in its charter)

Ontario	**1040**	**Not Applicable**
(Province or other jurisdiction of incorporation or organization)	(Primary Standard Industrial Classification Code Number (if applicable))	(I.R.S. Employer Identification Number)

Brookfield Place, 181 Bay Street, Suite 3910
Toronto, Ontario, Canada, M5J 2T3
(416) 368-9932

(Address and Telephone Number of Registrant's Principal Executive Offices)

Torys LLP
1114 Avenue of the Americas
23rd Floor
New York, New York 10036
Attention: Mile T. Kurta
(212) 880-6000

(Name, Address (Including Zip Code) and Telephone Number (Including Area Code) of Agent For Service in the United States)

Securities registered or to be registered pursuant to Section 12(b) of the Act.

Title of Each Class	Trading Symbol	Name Of Exchange On Which Registered
Class A Common Shares, Without Par Value	**AGI**	**The New York Stock Exchange**

Securities registered or to be registered pursuant to Section 12(g) of the Act:**None**

Securities for which there is a reporting obligation pursuant to Section 15(d) of the Act:**None**

For annual reports, indicate by check mark the information filed with this Form:

x Annual Information Form x Audited Annual Financial Statements

Indicate the number of outstanding shares of each of the issuer's classes of capital or common stock as of the close of the period covered by the annual report: 396,956,984 Class A Common Shares.

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files).

Yes x No o

Indicate by check mark whether the registrant: (1) has filed all reports required to be filed by Section 13 or 15(d) of the Exchange Act during the preceding 12 months (or for such shorter period that the registrant was required to file such reports); and (2) has been subject to such filing requirements for the past 90 days.

Yes x No o

Indicate by check mark whether the registrant is an emerging growth company as defined in Rule 12b-2 of the Exchange Act.

Emerging growth company o

If an emerging growth company that prepares its financial statements in accordance with U.S. GAAP, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. o

The term “new or revised financial accounting standard” refers to any update issued by the Financial Accounting Standards Board to its Accounting Standards Codification after April 5, 2012.

Indicate by check mark whether the registrant has filed a report on and attestation to its management’s assessment of the effectiveness of its internal control over reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report. x

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrant included in the filing reflect the correction of an error to previously issued financial statements. o

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant’s executive officers during the relevant recovery period pursuant to §240.10D-1(b). o

Principal Documents

The following documents, filed as Exhibits 99.1 through 99.3 hereto, are hereby incorporated by reference into this Annual Report on Form 40-F (this "Form 40-F"):

(a) Annual Information Form, dated March 25, 2024 for the Year Ended December 31, 2023 (filed as Exhibit 99.1 hereto) (the "Annual Information Form");

(b) Management's Discussion and Analysis for the Year Ended December 31, 2023 (filed as Exhibit 99.2 hereto); and

(c) Annual Audited Consolidated Financial Statements for the Year Ended December 31, 2023, including the Consolidated Statements of Financial Position as at December 31, 2023 and December 31, 2022, the related Consolidated Statements of Comprehensive Income, Changes in Equity, and Cash Flows for the Years Ended December 31, 2023 and December 31, 2022 and the Related Notes, together with the report of independent registered public accounting firm thereon and the report of independent registered public accounting firm on the effectiveness of internal control over financial reporting as of December 31, 2023, contained therein (filed as Exhibit 99.3 hereto).

Forward-looking statements

This Form 40-F and the exhibits attached hereto contain "forward-looking statements" within the meaning of the United States Securities Exchange Act of 1934, as amended (the "Exchange Act"), including the United States Private Securities Litigation Reform Act of 1995, and applicable Canadian securities laws, concerning Alamos Gold Inc.'s ("Alamos" or the "registrant") plans for its properties and other matters. All statements, other than statements of historical fact, which address events, results, outcomes or developments that the Company expects to occur are, or may be deemed, to be, forward-looking statements and are based on expectations, estimates and projects as at the date of this Form 40-F. Forward-looking statements are generally, but not always, identified by the use of forward-looking terminology such as "expect", "assume", "believe", "anticipate", "intend", "objective", "estimate", "potential", "forecast", "budget", "target", "goal", "on track", "on pace", "outlook", "continue", "ongoing", "plan" or variations of such words and phrases and similar expressions or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved or the negative connotation of such terms.

Such statements include, but may not be limited to, guidance and expectations pertaining to: free cash flow, gold production, total cash costs, all-in sustaining costs, mine-site all-in sustaining costs, capital expenditures, total sustaining and growth capital, capitalized exploration, and future fluctuations in the Company's effective tax rate; achieving annual guidance;cash tax payments in Mexico; use of the Company's Base Shelf Prospectus; expected completion of the acquisition of Orford Mining Corporation by Alamos; increases to production, value of operation and decreases to costs resulting from intended completion of the Phase 3+ Expansion at Island Gold; intended infrastructure investments in, method of funding for, and timing of the completion of, the Phase 3+ Expansion; planned tailings lift at Island Gold and timing for completion; timing of construction decision for the Lynn Lake project;the expectation that the Lynn Lake project will be an attractive, low-cost long-life growth project in Canada with significant exploration upside; expenditures on the development of the Lynn Lake project; the effect of court and administrative proceedings in Manitoba on project timelines for the Lynn Lake project; exploration potential, budgets, focuses, programs, targets and projected exploration results; returns to stakeholders; gold prices; potential for further growth from PDA, a new development plan for PDA and the expected timing of its completion; mine life, including an anticipated mine life extension at Mulatos; Mineral Reserve life; Mineral Reserve and Resource grades; reserve and resource estimates; mining and milling rates; the Company's approach to reduction of its environmental footprint (including new initiatives and target reduction in greenhouse gas emissions), community relations and governance; management's opinion that the Company's liquidity position together with cash flow from operations is sufficient to support the Company's normal operating requirements and capital commitments on an ongoing basis as well as other general information as to strategy, plans or future financial or operating performance, such as the Company's expansion plans, project timelines, production plans and expected sustainable productivity increases, expected increases in mining activities and corresponding cost efficiencies, forecasted cash shortfalls and the Company's ability to fund them, cost estimates, sufficiency of working capital for future commitments and other statements that express management's expectations or estimates of future plans and performance.

Alamos cautions that forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by the Company at the time of making such statements, are inherently subject to significant business, economic, technical, legal, political and competitive uncertainties and contingencies. Known and unknown factors could cause

actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information.

Risk factors that may affect Alamos' ability to achieve the expectations set forth in the forward-looking statements in this document include, but are not limited to: changes to current estimates of mineral reserves and resources; changes to production estimates (which assume accuracy of projected ore grade, mining rates, recovery timing and recovery rate estimates which may be impacted by unscheduled maintenance, weather issues, labour and contractor availability and other operating or technical difficulties); operations may be exposed to new diseases, epidemics and pandemics, including any ongoing effects and potential further effects of COVID-19; the impact of COVID-19 or any other new illness, epidemic or pandemic on the broader market and the trading price of the Company's shares; provincial and federal orders or mandates (including with respect to mining operations generally or auxiliary businesses or services required for the Company's operations) in Canada, Mexico, the United States and Türkiye; the duration of any ongoing or new regulatory responses to COVID-19 or any other new illness, epidemic or pandemic; government and the Company's attempts to reduce the spread of any illness, epidemic or pandemic which may affect many aspects of the Company's operations including the ability to transport personnel to and from site, contractor and supply availability and the ability to sell or deliver gold doré bars; fluctuations in the price of gold or certain other commodities such as, diesel fuel, natural gas, and electricity; changes in foreign exchange rates (particularly the Canadian Dollar, Mexican peso, U.S. dollar and Turkish lira); the impact of inflation; changes in the Company's credit rating; any decision to declare a quarterly dividend; employee and community relations;not receiving the requisite approvals for completion of the transaction pursuant to which Alamos would acquire Orford Mining Corporation; litigation and administrative proceedings (including but not limited to the investment treaty claim announced on April 20, 2021 against the Republic of Türkiye by the Company's wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V., the application for judicial review of the positive Decision Statement issued by the Department of Environment and Climate Change Canada commenced by the Mathias Colomb Cree Nation (MCCN) in respect of the Lynn Lake project and the MCCN's corresponding internal appeal of the Environment Act Licenses issued by the Province of Manitoba for the project); disruptions affecting operations; availability of and increased costs associated with mining inputs and labour; delays with the Phase 3+ expansion project at the Island Gold mine; court or other administrative decisions impacting the Company's approved Environmental Impact Study and/or issued project permits, construction decisions and any development of the Lynn Lake project; delays in the development or updating of mine plans; changes with respect to the intended method of accessing and mining the deposit at PDA and changes related to the intended method of processing any ore from the deposit of PDA; the risk that the Company's mines may not perform as planned; uncertainty with the Company's ability to secure additional capital to execute its business plans; the speculative nature of mineral exploration and development, including the risks of obtaining and maintaining necessary licenses and permits, including the necessary licenses, permits, authorizations and/or approvals from the appropriate regulatory authorities for the Company's development stage and operating assets; labour and contractor availability (and being able to secure the same on favourable terms); contests over title to properties; expropriation or nationalization of property; inherent risks and hazards associated with mining and mineral processing including environmental hazards, industrial hazards, industrial accidents, unusual or unexpected formations, pressures and cave-ins; changes in national and local government legislation, controls or regulations in Canada, Mexico, Türkiye, the United States and other jurisdictions in which the Company does or may carry on business in the future; increased costs and risks related to the potential impact of climate change; failure to comply with environmental and health and safety laws and regulations; disruptions in the maintenance or provision of required infrastructure and information technology systems; risk of loss due to sabotage, protests and other civil disturbances; the impact of global liquidity and credit availability and the values of assets and liabilities based on projected future cash flows; risks arising from holding derivative instruments; and business opportunities that may be pursued by the Company. The litigation against the Republic of Türkiye, described above, results from the actions of the Turkish government in respect of the Company's projects in the Republic of Türkiye. Such litigation is a mitigation effort and may not be effective or successful. If unsuccessful, the Company's projects in Türkiye may be subject to resource nationalism and further expropriation; the Company may lose any remaining value of its assets and gold mining projects in Türkiye and its ability to operate in Türkiye. Even if the litigation is successful, there is no certainty as to the quantum of any damages award or recovery of all, or any, legal costs. Any resumption of activities in Türkiye, or even retaining control of its assets and gold mining projects in Türkiye can only result from agreement with the Turkish government. The investment treaty claim described in this Form 40-F may have an impact on foreign direct investment in the Republic of Türkiye which may result in changes to the Turkish economy, including but not limited to high rates of inflation and fluctuation of the Turkish Lira which may also affect the Company's relationship with the Turkish government, the Company's ability to effectively operate in Türkiye, and which may have a negative effect on overall anticipated project values.

There can be no assurance that forward-looking statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from our expectations include risks related to the on-going business of Alamos, including risks related to international operations; the actual results of current exploration activities; conclusions of economic evaluations and changes in project parameters as plans continue to be refined as well as future prices of gold, as well as those risk factors described in the

section entitled “Risk Factors” in our Annual Information Form, attached hereto as Exhibit 99.1. Although we have attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended. We can provide no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. The Company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

ADDITIONAL DISCLOSURE

Certifications and Disclosure Regarding Controls and Procedures

(a) Certifications. See Exhibits 99.4 through 99.7 to this Form 40-F.

(b) Disclosure Controls and Procedures.

As of the end of Alamos' fiscal year ended December 31, 2023, Alamos' principal executive officer and principal financial officer carried out an evaluation of the effectiveness of Alamos' "disclosure controls and procedures" (as such term is defined in Rules 13a-15(e) and 15d-15(e) of the Exchange Act). Based on that evaluation, Alamos' principal executive officer and principal financial officer have concluded that as of the end of that fiscal year, Alamos' disclosure controls and procedures were effective to ensure that information required to be disclosed by Alamos in reports that it files or submits under the Exchange Act is (i) recorded, processed, summarized and reported within the time periods specified in Securities and Exchange Commission (the "SEC") rules and forms and (ii) accumulated and communicated to the registrant's management, including its principal executive officer and principal financial officer, to allow timely decisions regarding required disclosure.

It should be noted that, while Alamos' principal executive officer and principal financial officer believe that Alamos' disclosure controls and procedures provide a reasonable level of assurance that they are effective, they do not expect that Alamos' disclosure controls and procedures or internal control over financial reporting will prevent all errors and fraud. A control system, no matter how well conceived or operated, can provide only reasonable, not absolute, assurance that the objectives of the control system are met.

(c) Management's Annual Report on Internal Control Over Financial Reporting. Management's annual report on internal control over financial reporting appears under the heading "Internal Control over Financial Reporting" in Management's Discussion and Analysis for the Year Ended December 31, 2023 (filed as Exhibit 99.2 hereto), and is hereby incorporated by reference herein.

(d) Attestation Report of the Independent Registered Public Accounting Firm. KPMG LLP ("KPMG"), the independent registered public accounting firm that audited Alamos' consolidated financial statements for the fiscal year ended December 31, 2023, has issued its opinion on the effectiveness of Alamos' internal control over financial reporting as of December 31, 2023 (the "Attestation Report"). The Attestation Report is included in Exhibit 99.3 attached hereto, which is incorporated by reference into this Form 40-F.

(e) Changes in Internal Control over Financial Reporting. There were no changes in the Company's internal control over financial reporting that occurred during the year ended December 31, 2023 that have materially affected or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Notices Pursuant to Regulation BTR

None.

Audit Committee Financial Experts

Alamos' board of directors has determined that each of Claire Kennedy, Paul Murphy, David Fleck, and Elaine Ellingham, members of its audit committee, is an "audit committee financial expert" (as such term is defined in Form 40-F) and that each of Claire Kennedy, Paul Murphy, David Fleck, and Elaine Ellingham is "independent" (as defined in the listing standards of the New York Stock Exchange (the "NYSE").

Code of Ethics

Alamos has adopted a "Code of Ethics" (as that term is defined in Form 40-F), entitled Code of Business Conduct and Ethics (the " Code of Ethics"), that applies to all of its directors, officers, and employees.

The Code of Ethics is available for viewing on Alamos' website at www.alamosgold.com under About – Corporate Policy Downloads and is available in print to any shareholder who requests it. Requests for copies of the Code of Ethics should be made by contacting: Nils F. Engelstad, Senior Vice President, General Counsel of Alamos, Brookfield Place, 181 Bay Street, Suite 3910, Toronto, Ontario, Canada M5J 2T3, telephone: (416) 368-9932. Alternatively, requests may be sent by e-mail to notice@alamosgold.com.

The Code of Ethics, and all waivers of the Code of Ethics with respect to any director, officer, or employee of Alamos, will be posted promptly on Alamos' website.

Principal Accountant Fees and Services

KPMG LLP, Toronto, ON, Canada, is Alamos' external auditor (Auditor Firm ID: 85).

The information set forth under the heading "External Auditor Service Fees (By Category)" of the Annual Information Form, attached hereto as Exhibit 99.1, is incorporated by reference herein.

The audit committee of Alamos' board of directors has determined that the provision of these services is compatible with the maintenance of the independence of KPMG.

Pre-Approval Policies and Procedures

The Audit Committee shall pre-approve all audit and non-audit services provided by the independent auditors and not engage the independent auditors to perform the specific non-audit services prohibited by law or regulation. None of the services provided by the Alamos' independent auditors described above were approved pursuant to a waiver of pre-approval provisions under SEC rules (paragraph (c)(7)(i)(C) of Rule 2-01 of Regulation S-X.

Identification of the Audit Committee

Alamos has a separately-designated standing audit committee established in accordance with Section 3(a)(58)(A) of the Exchange Act. The members of Alamos' audit committee are: Claire Kennedy (Chair), Paul Murphy, David Fleck, and Elaine Ellingham.

DIFFERENCES IN UNITED STATES AND CANADIAN REPORTING PRACTICES

Alamos is permitted, under a multijurisdictional disclosure system adopted by the United States, to prepare documents incorporated by reference in this Form 40-F in accordance with Canadian disclosure requirements, which are different from those of the United States.

The documents incorporated by reference into this Form 40-F have been prepared in accordance with the requirements of the securities laws in effect in Canada, which differ from the requirements of United States securities laws. Unless otherwise indicated, all mineral resource and reserve estimates included in the documents incorporated by reference into this Form 40-F have been prepared in accordance with National Instrument 43-101 - *Standards of Disclosure for Mineral Projects* ("NI 43-101") and the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") - *CIM Definition Standards on Mineral Resources and Mineral Reserves* , adopted by the CIM Council, as amended. NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Mining disclosure in the United States was previously required to comply with SEC Industry Guide 7 ("SEC Industry Guide 7") under the United States *Securities Exchange Act of 1934* , as amended. The SEC has adopted final rules, effective February 25, 2019, to replace SEC Industry Guide 7 with new mining disclosure rules under sub-part 1300 of Regulation S-K of the U.S. Securities Act ("Regulation S-K 1300"). Regulation S-K 1300 replaces the historical property disclosure requirements included in SEC Industry Guide 7. Under Regulation S-K 1300, the SEC now recognizes estimates of "Measured Mineral Resources", "Indicated Mineral Resources" and "Inferred Mineral Resources". In addition, the SEC has amended its definitions of "Proven Mineral Reserves" and "Probable Mineral Reserves" to be substantially similar to international standards. Regulation S-K 1300 is mandatory for U.S. reporting companies beginning with the first fiscal year commencing on or after January 1, 2021. Readers are cautioned that despite efforts to harmonize U.S. mining disclosure rules with NI 43-101 and other international requirements, there are differences between the terms and definitions used in Regulation S-K 1300 and mining terms defined in the CIM Standards, which definitions have been adopted by NI 43-101, and there is no assurance that any mineral reserves or mineral resources that Alamos may report as "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under NI 43-101 would be the same had Alamos prepared the mineral reserve or mineral resource estimates under the standards of Regulation S-K 1300. Readers are also cautioned that while the SEC recognizes "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under Regulation S-K 1300, readers should not assume that any part or all of the mineralization in these categories will ever be converted into a higher category of mineral resources or into mineral reserves. Mineralization described using these terms has a greater degree of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, readers are cautioned not to assume that any measured

mineral resources, indicated mineral resources, or inferred mineral resources that Alamos reports are or will be economically or legally mineable.

Accordingly, information contained in this Form 40-F and the documents incorporated by reference herein containing descriptions of Alamos' mineral deposits may not be comparable to similar information made public by U.S. companies subject to the reporting and disclosure requirements under the United States federal securities laws and the rules and regulations thereunder.

TAX MATTERS

Purchasing, holding, or disposing of Alamos' securities may have tax consequences under the laws of the United States, Canada, and other jurisdictions that are not described in this Form 40-F.

NYSE CORPORATE GOVERNANCE

Alamos' common shares are listed on the NYSE. Sections 103.00 and 303A.11 of the NYSE Listed Company Manual permit "foreign private issuers" (as defined in Rule 3b-4 under the Exchange Act) to follow home country practices in lieu of certain provisions of the NYSE Listed Company Manual. A foreign private issuer that follows home country practices in lieu of certain provisions of the NYSE Listed Company Manual must disclose any significant ways in which its corporate governance practices differ from those followed by domestic companies either on its website or in the annual report that it distributes to shareholders in the United States. A description of the significant ways in which Alamos' corporate governance practices differ from those followed by domestic companies pursuant to NYSE standards is as follows:

Shareholder Meeting Quorum Requirement: The NYSE is of the opinion that the quorum required for any meeting of shareholders should be sufficiently high to insure a representative vote. Alamos' quorum requirement is set forth in its Articles. A quorum for a meeting of Alamos' shareholders is two persons who are, or who represent by proxy, shareholders who, in the aggregate, hold at least 5% of the shares entitled to be voted at the meeting.

Proxy Delivery Requirement: The NYSE requires the solicitation of proxies and delivery of proxy statements for all shareholder meetings, and requires that these proxies shall be solicited pursuant to a proxy statement that conforms to the SEC's proxy solicitation and disclosure rules. As a foreign private issuer, Alamos is exempt from the proxy solicitation and disclosure rules set forth in Sections 14(a), 14(b), 14(c), and 14(f) of the Exchange Act. Alamos solicits proxies in accordance with applicable rules and regulations in Canada.

Shareholder Approval Requirement: Alamos intends to follow Toronto Stock Exchange ("TSX") rules for shareholder approval of new issuances of its common shares. In accordance with TSX rules, shareholder approval is required for certain issuances of shares that: (i) materially affect control of Alamos; or (ii) provide consideration to insiders in an aggregate of 10% or greater of the market capitalization of the listed issuer and have not been negotiated at arm's length. Shareholder approval is also required, pursuant to TSX rules, in the case of private placements: (x) for an aggregate number of listed securities issuable greater than 25% of the number of securities of the listed issuer which are outstanding, on a non-diluted basis, prior to the date of closing of the transaction if the price per security is less than the market price; or (y) that during any six-month period are to insiders for listed securities or options, rights or other entitlements to listed securities greater than 10% of the number of securities of the listed issuer which are outstanding, on a non-diluted basis, prior to the date of the closing of the first private placement to an insider during the six-month period.

Equity Compensation Plans: Unlike the NYSE rules, there is no requirement in Canada for shareholder approval of compensation arrangements settled solely in cash or with shares purchased in the open market at fair value or for amendments to such arrangements. Alamos intends to comply with the TSX rules that require a listed company to obtain shareholder approval of any share compensation arrangement that involves the issuance of shares from treasury or to make amendments to such arrangements that require shareholder approval (in accordance with the TSX rules and the terms of such arrangement).

The foregoing is consistent with Canadian laws, customs and practices.

Independence of Directors

Alamos' board of directors has determined that eight of its nine directors, comprising a majority of the board, are "independent directors," as that term is defined in the rules of the NYSE and that none of these eight directors has a material relationship with Alamos that would impair his or her independence from management or otherwise compromise his or her ability to act as an independent director.

The directors who have been determined to be independent on this basis are Paul J. Murphy, Elaine Ellingham, David Fleck, David Gower, Claire M.C. Kennedy, Monique Mercier, J. Robert S. Prichard, and Shaun Usmar.

Presiding Director at Meetings of Independent Directors

Alamos schedules regular meetings in which its independent directors meet without the participation of management and non-independent directors. Paul Murphy, the chair of the board of directors, serves as the chair at such sessions.

Communication with Independent Directors

Shareholders may send communications to the registrant's independent directors by contacting Amber Howell, Assistant Corporate Secretary of Alamos, Brookfield Place, 181 Bay Street, Suite 3910, Toronto, Ontario, Canada M5J 2T3, telephone: (416) 368-9932. Alternatively, communications may be sent directly to the board of directors by e-mail to board@alamosgold.com.

Corporate Governance Guidelines

The rules of the NYSE require listed companies to adopt and disclose a set of corporate governance guidelines with respect to specified topics. Such guidelines are required to be posted on the listed company's website. Alamos' corporate governance principles are available for viewing on its website at www.alamosgold.com under *About - Corporate Governance*.

Board and Committee Charters

Alamos' board of directors' mandate and the charters for its audit committee, human resources committee, technical and sustainability committee, corporate governance and nominating committee, and public affairs committee are available for viewing on its website at www.alamosgold.com under *About - Corporate Governance* and are available in print to any shareholder who requests them. Requests for copies of these documents should be made by contacting Nils Engelstad, Senior Vice President, General Counsel of Alamos, Brookfield Place, 181 Bay Street, Suite 3910, Toronto, Ontario, Canada M5J 2T3, telephone: (416) 368-9932. Alternatively, requests may be sent by e-mail to notice@alamosgold.com.

OFF-BALANCE SHEET ARRANGEMENTS

Alamos discloses any off-balance sheet arrangements in its Management's Discussion and Analysis and noted there were none as at December 31, 2023.

MATERIAL CASH REQUIREMENTS

Alamos discloses material cash requirements as part of its "Commitments" disclosure in its Management's Discussion and Analysis.

MINE SAFETY DISCLOSURE

Pursuant to Section 1503(a) of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, issuers that are operators, or that have a subsidiary that is an operator, of a coal or other mine in the United States are required to disclose in their periodic reports filed with the SEC information regarding specified health and safety violations, orders and citations, related assessments and legal actions, and mining-related fatalities under the regulation of the Federal Mine Safety and Health Administration ("MSHA") under the Federal Mine Safety and Health Act of 1977, as amended (the "Mine Act"). During the fiscal year ended December 31, 2023, Alamos did not have any mines in the United States subject to regulation by MSHA under the Mine Act.

DISCLOSURE REGARDING FOREIGN JURISDICTIONS THAT PREVENT INSPECTIONS

None.

RECOVERY OF ERRONEOUSLY AWARDED COMPENSATION

Not applicable.

UNDERTAKING AND CONSENT TO SERVICE OF PROCESS

A. Undertaking.

The registrant undertakes to make available, in person or by telephone, representatives to respond to inquiries made by the SEC staff, and to furnish promptly, when requested to do so by the SEC staff, information relating to the securities registered pursuant to Form 40-F, the securities in relation to which the obligation to file an annual report on Form 40-F arises; or transactions in said securities.

B. Consent to Service of Process.

(1) The registrant has previously filed a Form F-X in connection with the class of securities in relation to which the obligation to file this report arises.

(2) Any change to the name or address of the agent for service of the registrant shall be communicated promptly to the SEC by amendment to Form F-X referencing the file number of the registrant.

SIGNATURES

Pursuant to the requirements of the United States Securities Exchange Act of 1934, as amended, the registrant certifies that it meets all of the requirements for filing on Form 40-F and has duly caused this annual report to be signed on its behalf by the undersigned, thereto duly authorized.

TSX:AGI | NYSE:AGI

Clawback Policy

1. Purpose

This Clawback Policy (the "**Policy**") will assist Alamos Gold Inc. (the "**Corporation**") in maintaining a culture that emphasizes integrity and accountability and will reinforce the Corporation's pay for performance compensation philosophy.

2. Definitions

In this Policy:

"**Adoption Date**" means the date on which the Board adopts this Policy, which shall be no later than December 1, 2023;

"**Board**" means the board of directors of the Corporation;

"**Covered Compensation**" means compensation to a Covered Individual that is granted, vested or earned based wholly or in part on the achievement of a Financial Reporting Measure, and includes, without limitation cash bonuses awarded under the Corporation's short-term or long-term incentive plans;

"**Covered Individuals**" means (i) current and former "executive officers" of the Corporation or its subsidiaries within the meaning of the U.S. Clawback Rules, and (ii) any other individuals as determined from time to time by the Board in its sole and absolute discretion;

"**Effective Date**" means October 2, 2023;

"**Exchange Act**" means the United States Securities Exchange Act of 1934, as amended;

"**Financial Reporting Measure**" means measures that are determined and presented in accordance with the accounting principles used in preparing the Corporation's financial statements, and any measures that are derived wholly or in part from such measures;

"**Recoverable Compensation**" means Covered Compensation received by a Covered Individual which is in excess of the Covered Compensation which ought to have been received by such Covered Individual based on the Restatement, as determined in accordance with the U.S. Clawback Rules and without regard to any taxes paid by such Covered Individual;

"**Restatement**" means the restatement of the financial statements of the Corporation required as a result of the Corporation's material non-compliance with any applicable financial reporting requirement under applicable securities laws, including any required accounting restatement to correct a material error in the Corporation's previously-issued financial statements, or to avoid a material misstatement if the error were corrected in the current period or left uncorrected in the current period; "**Restatement Date**" means the date on which the Corporation is required to prepare a Restatement (such date as determined in accordance with the U.S. Clawback Rules);

"**SEC**" means the United States Security and Exchange Commission;

"**Specified Period**" means the three most recently completed fiscal years of the Corporation preceding the applicable Restatement Date, as well as any transition period (that results from a change in the Corporation's fiscal year) within or immediately following those three completed fiscal years as specified in the U.S. Clawback Rules;

"**U.S. Clawback Rules**" means Section 10D of the Exchange Act, Rule 10D-1 issued thereunder, and the applicable U.S. Stock Exchange Rules;

"**U.S. Stock Exchange**" means the New York Stock Exchange, the National Association of Securities Dealers Automated Quotations (NASDAQ) and/or any other U.S. national securities exchange(s) on which the Corporation's securities are listed; and

"**U.S. Stock Exchange Rules**" means Section 303A.14 of the New York Stock Exchange Listed Company Manual, Listing Rule 5608 of the corporate governance rules of The Nasdaq Stock Market and/or the listing standards of any other U.S. national securities exchange(s) on which the Corporation's securities are listed to implement Rule 10D-1 under the Exchange Act.

3. Application of Policy

All Covered Compensation received by Covered Individuals on or after the Effective Date will be subject to the terms of this Policy, as amended from time to time, and subject to any adjustment required by local law, including any securities, stock exchange, employment or tax laws, regulations or practices which may apply to a Covered Individual or the Corporation.

A copy of this Policy will be made available to Covered Individuals as soon as practicable after the Adoption Date and to Covered Individuals at the time of their hire or their promotion, as applicable, as well as in connection with the grant of any Covered Compensation. In addition, this Policy will be incorporated into the terms of each document setting forth the terms and conditions of any Covered Compensation granted or paid to a Covered Individual, including the Corporation's short-term and long-term incentive plans, grant agreements, award notices and any other compensation plans or arrangements, as applicable, as soon as practicable after the Adoption Date.

4. Triggering Event; Recoverable Amount

In the event the Corporation is required to file a Restatement, the Board will review all Covered Compensation received by Covered Individuals (a) after becoming a Covered Individual, (b) during the Specified Period, (c) while the Corporation has a class of securities listed on a U.S. Stock Exchange, and (d) after the U.S. Stock Exchange Rules became effective (i.e., the Effective Date). For purposes of this Policy, Covered Compensation is deemed "received" in the fiscal period during which the Financial Reporting Measure specified in the Covered Compensation is attained, regardless of when such Covered Compensation is granted or paid. If the Board determines that a Covered Individual received Recoverable Compensation in connection with the Restatement, the Corporation shall, reasonably promptly after the Restatement Date, require the forfeiture or repayment of all such Recoverable Compensation, subject to the exceptions set forth below under "— Recoupment Exceptions".

For Covered Compensation based on a stock price or total shareholder return where the amount of Recoverable Compensation is not subject to mathematical recalculation directly from the information in a Restatement: (i) the amount of Recoverable Compensation must be based on a reasonable estimate of the effect of the Restatement on the stock price or total shareholder return upon which the Covered

Compensation was received; and (ii) the Corporation must maintain documentation of the determination of that reasonable estimate and provide such documentation to the applicable U.S. Stock Exchange.

5. Enforcement of Clawback

The application and enforcement of this Policy to recoup Recoverable Compensation may include (to the fullest extent permitted by applicable law), in the Board's sole and absolute discretion and without limitation, the following:

a. forfeiture or cancellation of unpaid or unvested Recoverable Compensation;

b. not paying or granting future compensation or equity awards to the Covered Individual to which the Covered Individual is contractually or legally entitled;

c. recoupment of any gain realized on the vesting, exercise, settlement, sale, transfer or other disposition of any equity-based awards;

d. recoupment of the pre-tax value of any Recoverable Compensation previously paid;

e. the right of offset against any amounts otherwise payable by the Corporation or any of its subsidiaries to the Covered Individual, to the extent permitted by applicable employment standards legislation and/or other applicable law; and

f. any other remedial and recovery action permitted by applicable law.

6. Recoupment Exceptions

Any Recoverable Compensation must be recovered as provided in this Policy unless a committee of independent directors of the Board responsible for executive compensation decisions (or in the absence of such committee, the majority of the independent directors serving on the Board) determines that any of the impracticality exceptions set forth in the U.S. Clawback Rules are available.

The obligation to recover Recoverable Compensation is not dependent on if or when the restated financial statements in connection with the Restatement have been filed.

Recoupment of Recoverable Compensation due to a Restatement will be made on a "no fault" basis, without regard to whether any Covered Individual is responsible for the noncompliance that resulted in the Restatement.

7. Compensation Adjustment

In the event the Corporation is required to file a Restatement that results in Covered Compensation granted, vested or earned by a Covered Individual with respect to the Specified Period being less than the Covered Compensation which ought to have been granted, vested or earned based on the Restatement, the Corporation shall be entitled, at the sole discretion of the Board, to compensate the Covered Individual for such difference.

8. No Indemnification of Covered Individuals

The Corporation shall not indemnify any Covered Individual against the loss of any Recoverable Compensation.

9. Indemnification of the Board

Any members of the Board who assist in the administration of this Policy will not be personally liable for any action, determination or interpretation made with respect to this Policy and will be fully indemnified by the Corporation to the fullest extent under applicable law and Corporation policy with respect to any such action, determination or interpretation. The foregoing sentence will not limit any other rights to indemnification of the members of the Board under applicable law or the Corporation.

10. Administration

The Board shall make all determinations with respect to the application and enforcement of this Policy, including, without limitation, the determination of Covered Individuals subject to this Policy and the amount of Recoverable Compensation with respect to any Covered Individual. All determinations and decisions made by the Board pursuant to the provisions of this Policy shall be final, conclusive and binding on all parties. The Board may, from time to time, delegate to the Human Resources and Corporate Governance and Nominating Committee of the Board or any other committee of the Board all or any of the rights or responsibilities of the Board under this Policy, to the extent permitted under the U.S. Clawback Rules.

11. Amendment

The Board reserves the right to modify or amend, in whole or in part, any or all of the provisions of this Policy, at any time and from time to time. Any amendment to this Policy shall only apply with respect to Covered Compensation granted, awarded or earned on or after the date of such amendment; provided, that an amendment to this Policy may apply with retroactive effect to the extent required by the U.S. Clawback Rules or any other applicable law.

12. Further Reference to Applicable SEC and U.S. Stock Exchange Rules

This Policy shall be qualified by reference to, is designed to comply with, and will be interpreted consistent with the U.S. Clawback Rules.

13. Filing with the SEC

This Policy and any amendments thereto shall be filed with the SEC as an exhibit to the Corporation’s annual report on Form 10-K (or other applicable form) beginning with the first report as specified under the U.S. Clawback Rules.

14. Other Rights

Any forfeiture or recoupment rights under this Policy are in addition to, and not in lieu of, any other remedies or rights that might be available to the Corporation pursuant to the terms of any employment agreement or under applicable law.

ANNUAL INFORMATION FORM
("AIF")

ALAMOS GOLD INC.
(the "Company")

PRELIMINARY NOTES

Effective Date of Information

The information in this AIF is current as of March 25, 2024, unless otherwise stated herein.

Currency and Exchange Rates

All dollar amounts in this AIF are expressed in United States dollars unless otherwise indicated (" **CAD**" denotes Canadian dollars). The following table sets forth the value of the Canadian dollar expressed in United States dollars on December 31 of each year and the average, high, and low exchange rates during the year indicated based on the daily exchange rate as reported by the Bank of Canada**.**

Canadian Dollars into United States Dollars	2023	2022	2021
Closing	$0.7561	$0.7383	$0.7888
Average	$0.7409	$0.7692	$0.7980
High	$0.7207	$0.8031	$0.8306
Low	$0.7617	$0.7217	$0.7727

The exchange rate on March 25, 2024, as reported by the Bank of Canada for the conversion of United States dollars into Canadian dollars was USD$0.7362 equals CAD$1.00.

Imperial Equivalents

For ease of reference, the following factors for converting metric measurements to imperial equivalents are provided:

To Convert from Metric	To Imperial	Multiply by
Hectares	Acres	2.471
Metres (m)	Feet (ft.)	3.281
Kilometres (km)	Miles	0.621
Tonnes	Tons (2000 pounds)	1.102
Grams/tonne	Ounces/ton (troy/ton)	0.029

Forward-Looking Statements

This AIF contains or incorporates by reference "forward-looking statements" and "forward-looking information" as defined under applicable Canadian and US securities legislation. All statements other than statements of historical fact included in this AIF which address events, results, outcomes or developments that the Company expects to occur are, or may be deemed to be, forward-looking statements. Forward-looking statements are generally, but not always, identified by the use of forward-looking terminology such as "expect", "plan", "anticipate", "believe", assume", "intend", "objective", "estimate", "potential", "forecast", "budget", "target", "goal", "on track", "outlook", "continue", "ongoing", or variations of such words and phrases and similar expressions or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved or the negative connotation of such terms. Forward-looking statements in this AIF are based on expectations, estimates and projections as at the date of this AIF.

Forward-looking statements in this AIF include, but may not be limited to, statements and expectations regarding: outlooks for Young-Davidson, Island Gold, and the Mulatos District (including La Yaqui Grande) pertaining to gold grades, production rates, mining and processing rates, total cash costs, mine-site AISC, capital spending, capitalized exploration, cash flow, operational performance, and Mineral Reserve and mine life; increases to production, value of operation and decreases to costs resulting from the intended completion of the Phase 3+ expansion at Island Gold; intended infrastructure investments in,

method of funding for, and timing of the completion of, the Phase 3+ expansion; construction activities at Island Gold; development of the Lynn Lake Gold Project; planned continuation of negotiation of formal agreements with directly affected First Nations in respect of the Lynn Lake Gold Project; planned exploration, drilling targets, exploration potential and results; exploration and mining the deposit at Puerto Del Aire; reductions in GHG emissions; expected completion of the acquisition of Orford Mining Corporation by Alamos; holding costs in Türkiye; schedule for the BIT Claim; as well as other general statements and information as to strategy, plans or future financial or operating performance, such as the Company's expansion plans, project timelines, production plans and expected sustainable productivity increases, expected increases in mining activities and corresponding cost efficiencies, expected exploration programs, targets and budgets, expected sustaining costs, expected improvements in cash flows and margins, expectations of changes in capital expenditures, forecasted cash shortfalls and the Company's ability to fund them, cost estimates, projected exploration results, reserve and resource estimates, expected recoveries, sufficiency of working capital for future commitments, gold prices, returns to stakeholders and other statements that express management's expectations or estimates of future plans and performance.

A Mineral Resource that is classified as "Inferred" or "Indicated" has a great amount of uncertainty as to its existence and economic and legal feasibility. It cannot be assumed that any or part of an "Indicated Mineral Resource" or "Inferred Mineral Resource" will ever be upgraded to a higher category of Mineral Resource. Investors are cautioned not to assume that all or any part of mineral deposits in these categories will ever be converted into Proven and Probable Mineral Reserves.

The Company cautions that forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by the Company at the time of making such statements, are inherently subject to significant business, economic, technical, legal, political and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements, and undue reliance should not be placed on such statements and information.

Such factors and assumptions underlying the forward-looking statements in this document include, but are not limited to: changes to current estimates of mineral reserves and resources; changes to production estimates (which assume accuracy of projected ore grade, mining rates, recovery timing and recovery rate estimates which may be impacted by unscheduled maintenance, weather issues, labour and contractor availability and other operating or technical difficulties); operations may be exposed to new diseases, epidemics and pandemics, including any ongoing effects and potential further effects of COVID-19; the impact of COVID-19 or any other new illness, epidemic or pandemic on the broader market and the trading price of the Company's shares; provincial and federal orders or mandates (including with respect to mining operations generally or auxiliary businesses or services required for the Company's operations) in Canada, Mexico, the United States and Türkiye; the duration of any ongoing or new regulatory responses to COVID-19 or any other new illness, epidemic or pandemic; government and the Company's attempts to reduce the spread of COVID-19 or any other new illness, epidemic or pandemic which may affect many aspects of the Company's operations including the ability to transport personnel to and from site, contractor and supply availability and the ability to sell or deliver gold doré bars; fluctuations in the price of gold or certain other commodities such as, diesel fuel, natural gas, and electricity; changes in foreign exchange rates (particularly the Canadian Dollar, Mexican Peso, U.S. Dollar and Turkish Lira); the impact of inflation; changes in the Company's credit rating; any decision to declare a quarterly dividend; not receiving the requisite approvals for completion of the transaction pursuant to which Alamos would acquire Orford Mining Corporation; employee and community relations; litigation and administrative proceedings (including but not limited to the investment treaty claim announced on April 20, 2021 against the Republic of Türkiye by the Company's wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V., the application for judicial review of the positive Decision Statement issued by the Ministry of Environment and Climate Change Canada commenced by the Mathias Colomb Cree Nation (MCCN) in respect of the Lynn Lake Gold Project and the MCCN's corresponding internal appeal of the Environment Act Licenses issued by the Province of Manitoba for the project) and any resulting court, arbitral and/or administrative decisions; disruptions affecting operations; availability of and increased costs associated with mining inputs and labour; delays with the Phase 3+ expansion project at the Island Gold mine; delays in permitting, construction decisions and any development of the Lynn Lake Gold Project; delays in the development or updating of mine plans; changes with respect to the intended method of accessing and mining the deposit at Puerto Del Aire and changes related to the intended method of processing any ore from the deposit of Puerto Del Aire; the risk that the Company's mines may not perform as planned; uncertainty with the Company's ability to secure additional capital to execute its business plans; the speculative nature of mineral exploration and development, including the risks of obtaining and maintaining necessary licenses and permits, including the necessary licenses, permits, authorizations and/or approvals from the appropriate regulatory authorities for the Company's development stage and operating assets; labour and contractor availability (and being able to secure the same on favourable terms); contests over title to properties; expropriation or nationalization of property; inherent risks and hazards associated with mining and mineral processing including environmental hazards, industrial hazards, industrial accidents, unusual or unexpected formations, pressures and cave-ins; changes in national and local government legislation, controls or regulations in Canada, Mexico, Türkiye, the United States and other jurisdictions in which the Company does or may carry on business in the future; increased costs and risks related to the potential impact of climate change; failure to comply with environmental and health and safety laws and regulations; disruptions in the maintenance or provision of required infrastructure and information technology systems; risk of loss due to sabotage, protests and other civil disturbances; the impact of global liquidity and credit availability and the values of assets and liabilities based on projected future cash flows; risks

arising from holding derivative instruments; and business opportunities that may be pursued by the Company. The litigation against the Republic of Türkiye, described above, results from the actions of the Turkish government in respect of the Company's projects in the Republic of Türkiye. Such litigation is a mitigation effort and may not be effective or successful. If unsuccessful, the Company's projects in Türkiye may be subject to resource nationalism and further expropriation; the Company may lose any remaining value of its assets and gold mining projects in Türkiye and its ability to operate in Türkiye or to put any of the Kirazli, Ağı Dağı or Çamyurt sites into production, resulting in the Company removing those three projects from its Total Mineral Reserves and Resources. Even if the litigation is successful, there is no certainty as to the quantum of any damages award or recovery of all, or any, legal costs. Any resumption of activities in Türkiye, or even retaining control of its assets and gold mining projects in Türkiye can only result from agreement with the Turkish government. The investment treaty claim described above may have an impact on foreign direct investment in the Republic of Türkiye which may result in changes to the Turkish economy, including but not limited to high rates of inflation and fluctuation in the Turkish Lira which may also affect the Company's relationship with the Turkish government, the Company's ability to effectively operate in Türkiye, and which may have a negative effect on overall anticipated project values.

Additional risk factors and details with respect to such risk factors are described in the section entitled "Risk Factors" in this AIF. In addition, important factors and assumptions underlying the Company's three-year production and operating guidance may be found in the Company's January 10, 2024, news release (available on SEDAR+ at www.sedarplus.ca) titled "Alamos Gold Achieves Increased 2023 Guidance with Record Annual Production and Provides Three-Year Production and Operating Guidance". Although the Company has attempted to identify important factors and risks that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated, or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements.

The Company disclaims any intention or obligation to update or revise any forward-looking statements, whether written or oral, or whether as a result of new information, future events or otherwise, except as required by applicable law.

Cautionary Note to US Investors

Measured, Indicated and Inferred Resources: Unless otherwise indicated, all Mineral Resource and Mineral Reserve estimates included in this AIF have been prepared in accordance with National Instrument 43-101 - *Standards of Disclosure for Mineral Projects* ("**NI 43-101**") and the Canadian Institute of Mining, Metallurgy and Petroleum (the "**CIM**") - *CIM Definition Standards on Mineral Resources and Mineral Reserves* , adopted by the CIM Council, as amended (the "**CIM Standards**"). NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Mining disclosure in the United States was previously required to comply with SEC Industry Guide 7 ("**SEC Industry Guide 7**") under the United States Securities Exchange Act of 1934, as amended. The U.S. Securities and Exchange Commission (the "**SEC**") has adopted final rules, to replace SEC Industry Guide 7 with new mining disclosure rules under sub-part 1300 of Regulation S-K of the U.S. Securities Act ("**Regulation S-K 1300**") which became mandatory for U.S. reporting companies beginning with the first fiscal year commencing on or after January 1, 2021. Under Regulation S-K 1300, the SEC now recognizes estimates of "Measured Mineral Resources", "Indicated Mineral Resources" and "Inferred Mineral Resources". In addition, the SEC has amended its definitions of "Proven Mineral Reserves" and "Probable Mineral Reserves" to be substantially similar to international standards.

Investors are cautioned that while the above terms are "substantially similar" to CIM Definitions, there are differences in the definitions under Regulation S-K 1300 and the CIM Standards. Accordingly, there is no assurance any mineral reserves or mineral resources that the Company may report as "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under NI 43-101 would be the same had the Company prepared the mineral reserve or mineral resource estimates under the standards adopted under Regulation S-K 1300. U.S. investors are also cautioned that while the SEC recognizes "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under Regulation S-K 1300, investors should not assume that any part or all of the mineralization in these categories will ever be converted into a higher category of mineral resources or into mineral reserves. Mineralization described using these terms has a greater degree of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, investors are cautioned not to assume that any measured mineral resources, indicated mineral resources, or inferred mineral resources that the Company reports are or will be economically or legally mineable.

Normal Course Issuer Bid ("NCIB")

On December 21, 2022, the Company announced that it filed with and received acceptance from the Toronto Stock Exchange (" **TSX**") for renewal of its NCIB, permitting it to purchase for cancellation up to 34,670,378 Common Shares, representing ten

percent (10%) of the Company's public float as of December 14, 2022. The NCIB provided that the Company may purchase Common Shares over a twelve-month period beginning December 24, 2022 and ending December 23, 2023. The Company did not purchase shares under the NCIB.

On December 21, 2023, the Company announced a further renewal of its NCIB, permitting it to purchase for cancellation up to 3 34,485,405 Common Shares, representing ten percent (10%) of the Company's public float as of December 14, 2023. The NCIB provides that the Company may purchase Common Shares over a twelve-month period beginning December 24, 2023 and ending December 23, 2024. Any purchases made by the Company will be effected through the facilities of the TSX, alternative Canadian trading systems, and/or the NYSE. Between December 24, 2023, and March 25, 2024, the Company did not purchase shares under the NCIB.

Non-GAAP Measures and Additional GAAP Measures

The Company has included certain non-GAAP financial measures to supplement its Consolidated Financial Statements, which are presented in accordance with IFRS, including the following contained herein:

- total cash cost per ounce of gold sold;
- mine-site all-in sustaining cost per ounce of gold sold;
- all-in sustaining cost ("**AISC**") per ounce of gold sold;
- sustaining and non-sustaining capital expenditures;
- growth capital; and
- mine-site free cash flow.

The Company believes that these measures, together with measures determined in accordance with IFRS, provide investors with an improved ability to evaluate the underlying performance of the Company. Non-GAAP financial measures do not have any standardized meaning prescribed under IFRS, and therefore, they may not be comparable to similar measures employed by other companies. The data is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Management's determination of the components of non-GAAP and additional measures are evaluated on a periodic basis influenced by new items and transactions, a review of investor uses, and new regulations as applicable. Any changes in the measures are duly noted and retrospectively applied as applicable.

Total Cash Costs per ounce

Total cash costs per ounce is a non-GAAP term typically used by gold mining companies to assess the level of gross margin available to the Company by subtracting these costs from the unit price realized during the period. This non-GAAP term is also used to assess the ability of a mining company to generate cash flow from operations. Total cash costs per ounce includes mining and processing costs plus applicable royalties, net of by-product revenue, and net realizable value adjustments. Total cash costs per ounce is exclusive of exploration costs.

Total cash costs per ounce is intended to provide additional information only and does not have any standardized meaning under IFRS, and may not be comparable to similar measures presented by other mining companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The measure is not necessarily indicative of cash flow from operations under IFRS or operating costs presented under IFRS.

All-in Sustaining Cost per ounce and Mine-site All-in Sustaining Cost

The Company adopted an "all-in sustaining costs per ounce" non-GAAP performance measure in accordance with the World Gold Council published in June 2013. The Company believes the measure more fully defines the total costs associated with producing gold; however, this performance measure has no standardized meaning. Accordingly, there may be some variation in the method of computation of "all-in sustaining costs per ounce" as determined by the Company compared with other mining companies. In this context, "all-in sustaining costs per ounce" for the consolidated Company reflects total mining and processing costs, corporate and administrative costs, share-based compensation, exploration costs, sustaining capital, and other operating costs.

For the purposes of calculating "mine-site all-in sustaining costs" at the individual mine-sites, the Company does not include an allocation of corporate and administrative costs and share-based compensation.

Sustaining capital expenditures are expenditures that do not increase annual gold ounce production at a mine site and exclude all expenditures at the Company's development projects as well as certain expenditures at the Company's operating sites that are deemed expansionary in nature ("growth capital"). For each mine-site reconciliation, corporate and administrative costs, and non-site-specific costs are excluded in the calculation of mine-site all-in sustaining cost per ounce.

All-in sustaining costs per gold ounce is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures presented by other mining companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

The measure is not necessarily indicative of cash flow from operations under IFRS or operating costs presented under IFRS.

Mine-site Free Cash Flow

"Mine-site free cash flow" is a non-GAAP financial performance measure calculated as cash flow from mine-site operating activities, less mineral property, plant, and equipment expenditures. The Company believes this to be a useful indicator of our ability to operate without reliance on additional borrowing or usage of existing cash. Mine-site free cash flow is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures of performance presented by other mining companies. Mine-site free cash flow should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

Detailed reconciliations of the non-GAAP measures to IFRS measures for the years ended December 31, 2023, and December 31, 2022, can be found in the Company's MD&A for the year ended December 31, 2023, as available on the Alamos website at www.alamosgold.com and on the System for Electronic Document Analysis and Retrieval+ (SEDAR+) at www.sedarplus.ca.

GLOSSARY OF TERMS

In this AIF unless otherwise defined or unless there is something in the subject matter or context inconsistent therewith, the following terms have the meanings set forth herein or therein:

"Ag"	Silver.
"AIF"	Annual Information Form.
"AISC"	All-in sustaining cost.
"Alamos"	Alamos Gold Inc. which is also referred to as the "Company".
"Argonaut"	Argonaut Gold Inc.
"ASL"	Analytical Solutions Ltd.
"Au"	Gold.
"Au Rico"	AuRico Gold Inc. with which "Former Alamos" amalgamated under section 182 of the OBCA pursuant to Articles of Arrangement dated July 2, 2015.
"BIT"	The Netherlands-Türkiye Bilateral Investment Treaty.
"BIT Claim"	The bilateral investment treaty claim commenced against the Republic of Türkiye by the Company's wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A. and Alamos Gold Holdings B.V., for expropriation and unfair and inequitable treatment, among other things, in respect of their Ağı Dağı, Kirazlı, and Çamyurt projects in the Biga district of northwestern Türkiye.
"BWI"	Bond Ball Work Index.
"CAD"	Canadian dollars.
"Canamax"	Canamax Resources Inc.
"CIL"	Carbon-in-leach.
"CIM"	Canadian Institute of Mining, Metallurgy and Petroleum.
"CIM Standards"	Mineral Resources and Mineral Reserves prepared by the CIM Standing Committee on Reserve Definitions adopted by CIM Council on May 10, 2014.
"CIP"	Carbon-in-pulp.
"CO2e"	Carbon dioxide equivalent.
"Company"	Alamos Gold Inc.
"Construplan"	Grupo Construcciones Planificadas, S.A. de C.V.

"CRM"	Certified reference material.
"doré"	Unrefined gold and silver bullion bars, which will be further refined to almost pure metal.
"EPS"	The Ontario Emissions Performance Standard under which Young-Davidson and Island Gold began reporting emissions effective January 1, 2022.
"ETS"	Emissions Trading System.
"Former Alamos"	Alamos Gold Inc. as it existed prior to its amalgamation with AuRico.
"grade"	Term used to indicate the concentration of an economically desirable mineral or element in its host rock as a function of its relative mass. With gold, this term may be expressed as grams per tonne ("**g/t**") or ounces per tonne (" **opt**").
"g/t Au"	Grams per tonne of gold.
"GDI"	Grupo Desarrollo Infraestructura, S.A. de C.V.
"GHG"	Greenhouse gas.
"GLDZ"	Goudreau Lake Deformation Zone.
"ICP"	Inductively Coupled Plasma.
"IFRS"	International Financial Reporting Standards as issued by the International Accounting Standards Board; the accounting principles used by the Company.
"Indicated Resource" or "Indicated Mineral Resource"	That part of a Mineral Resource for which quantity, grade or quality, densities, shape, and physical characteristics can be estimated with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed.
"Inferred Resource" or "Inferred Mineral Resource"	That part of a Mineral Resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes.
"Island Gold" or the "Island Gold Mine"	The underground gold mine owned and operated by the Company located just east of the town of Dubreuilville, 83 kilometres northeast of Wawa in Northern Ontario.
"Island Gold Property"	The Island Gold Mine and its surrounding project lands.
"km"	Kilometres.
"kWh/t"	Kilowatt hours per tonne.
"leaching"	The separation, selective removal, or dissolving-out of soluble constituents from a rock or ore body by the natural actions of percolating solutions.
"LLCFZ"	The regional Larder Lake-Cadillac Fault Zone which cuts across the Young-Davidson project area.
"Lynn Lake Gold Project" or Lynn Lake"	The Company's development project in Lynn Lake, Manitoba, which is located in northern Manitoba and consists of two primary sites, MacLellan and Gordon, which are just east of the Town of Lynn Lake.
"m"	Metres.
"Manitou"	Manitou Gold Inc.
"MCM Mine"	Matachewan Consolidated Mines Limited Mine.
"MD&A"	Management's Discussion & Analysis of the Company for the year ended December 31, 2023.
"Measured Resource" or "Measured Mineral Resource"	That part of a Mineral Resource for which quantity, grade or quality, densities, shape, physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters, to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling, and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings, and drill holes that are spaced closely enough to confirm both geological and grade continuity.
"MGB"	Michipicoten Greenstone Belt.

"Mineral Reserve"	The economically mineable part of a Measured or Indicated Mineral Resource demonstrated by at least a preliminary feasibility study. The study must include adequate information on mining, processing, metallurgical, economics, and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A Mineral Reserve includes diluting materials and allowances for losses that occur when the material is mined and processed.
"Mineral Resource"	A concentration or occurrence of natural, solid, inorganic, or fossilized organic material in or on the earth's crust in such form and quantity and of such grade or quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics, and continuity of a Mineral Resource are known, estimated, or interpreted from specific geological evidence and knowledge. The term "Mineral Resource" covers mineralization and natural material of intrinsic economic interest which has been identified and estimated through exploration and sampling and within which Mineral Reserves may subsequently be defined by the consideration and application of technical, economic, legal, environmental, socio-economic, and governmental factors. The phrase "reasonable prospects for economic extraction" implies a judgment by the Qualified Person in respect of the technical and economic factors likely to influence the prospect of economic extraction. A Mineral Resource is an inventory of mineralization that under realistically assumed and justifiable technical and economic conditions might become economically extractable. The term "Mineral Resource" used in this AIF is a Canadian mining term as defined in accordance with NI 43-101 under the guidelines set out in the CIM Standards.
"Modifying Factors"	Considerations used to convert Mineral Resources to Mineral Reserves. These include, but are not restricted to, mining, processing, metallurgical, infrastructure, economic, marketing, legal, environmental, social, and governmental factors.
"MON"	Minas de Oro Nacional, S.A. de C.V., a wholly-owned Mexican subsidiary of Alamos.
"Mt"	Million tonnes.
"Mulatos Group of Concessions"	The Mulatos deposit and satellite gold systems known as Cerro Pelon, La Yaqui, El Carricito, El Halcon, Las Carboneras, El Jaspe, Puebla, Los Bajios, and La Dura.
"Mulatos Mine"	The Mulatos mine in the state of Sonora, Mexico controlled by MON.
"NCIB"	Normal Course Issuer Bid.
"NI 43-101"	National Instrument 43-101 - Standards of Disclosure for Mineral Projects of the Canadian Securities Administrators.
"Northgate"	Northgate Minerals Corporation.
"NPI"	Net profit interest royalty.
"NQ diameter"	1.75-inch diameter drill hole.
"NSR"	Net smelter return royalty, consisting of a payment made by a producer of metals based on the value of the gross metal production from the property, less deduction of certain limited costs including, but not necessarily limited to, smelting, refining, transportation, and insurance costs.
"NYSE"	New York Stock Exchange.
"OBCA"	*Business Corporations Act* (Ontario).
"OBPS"	The Output-Based Pricing System under which Young-Davidson and Island Gold reported emissions prior to January 1, 2022.
"ore"	A natural aggregate of one or more minerals which, at a specified time and place, may be mined and sold at a profit, or from which some part may be profitably separated.
"Osisko"	Osisko Gold Royalties Ltd.
"ounces" or "oz"	A measure of weight in gold and other precious metals, correctly troy ounces, which weigh 31.2 grams as distinct from an imperial ounce which weighs 28.4 grams.
"P3+ Expansion Study"	The Phase 3+ Expansion Study on the Island Gold Mine, the results of which were reported on June 28, 2022.
"Patricia"	Patricia Mining Corp.
"PDA"	Puerto Del Aire – a mineralized zone forming part of the Mulatos deposit.
"PEA"	Preliminary economic assessment.
"ppm"	Parts per million.
"ppb"	Parts per billion.

"Probable Mineral Reserve"	The economically mineable part of an Indicated Mineral Resource, and in some circumstances, a Measured Mineral Resource. The confidence in the Modifying Factors applying to a Probable Mineral Reserve is lower than that applying to a Proven Mineral Reserve.
"Proven Mineral Reserve"	The economically mineable part of a Measured Mineral Resource. A Proven Mineral Reserve implies a high degree of confidence in the Modifying Factors.
"QA/QC"	Quality assurance/quality control.
"Qualified Person"	Has the meaning given to such term in NI 43-101.
"Redpath"	Redpath Canada Inc.
"Regulation S-K 1300"	The new rules adopted by the SEC under sub-part 1300 of Regulation S-K of the U.S. Securities Act with respect to mining disclosure in the United States to replace SEC Industry Guide 7 and which became mandatory for U.S. reporting companies beginning with the first fiscal year commencing on or after January 1, 2021.
"Richmont"	Richmont Mines Inc. with which Alamos amalgamated under section 182 of the OBCA pursuant to Articles of Arrangement dated August 1, 2018.
"Royal Oak"	Royal Oak Mines Inc.
"RQD"	Rock quality designation.
"Standard"	The Energy and Greenhouse Gas Management Standard which informs the Company's actions to reduce emission intensity, energy-related costs and mitigate risks related to climate change, energy security, supply and cost.
"SEC"	US Securities and Exchange Commission.
"SEC Industry Guide 7"	SEC Industry Guide 7 under the United States Securities Exchange Act of 1934, as amended – the SEC Industry Guide with which mining disclosure in the United States was required to comply. SEC Industry Guide 7 was replaced by Regulation S-K 1300.
"SEDAR+"	System for Electronic Document Analysis and Retrieval+ which can be found at www.sedarplus.ca
"SOX"	The *Sarbanes-Oxley Act of 2002*.
"T&S Committee"	The Technical and Sustainability Committee of the Company's Board of Directors.
"tpd"	Tonnes per day.
"Trillium"	Trillium Mining Corp. which was acquired by the Company in December, 2020.
"TSX"	Toronto Stock Exchange.
"µm"	Micrometer.
"URSTM"	Unité de Recherche et de Service en Technologie Minérale, a research unit affiliated to the Université du Québec Abitibi-Témiscamingue.
"US"	United States of America.
"Wesdome"	The Wesdome Laboratory in Wawa, Ontario.
"Young-Davidson" or the "Young-Davidson Mine"	The underground gold mine owned and operated by the Company located near the town of Matachewan, approximately 60 kilometres west of Kirkland Lake in Northern Ontario, within the Abitibi Greenstone Belt.

CORPORATE STRUCTURE

Name and Incorporation

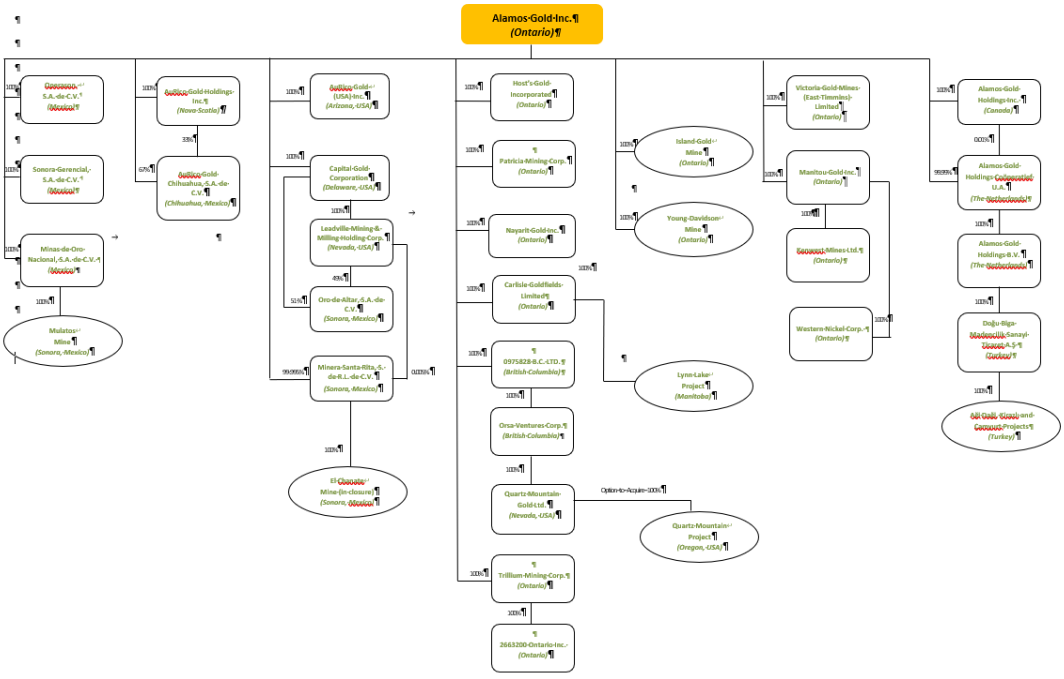

The name of the Company is Alamos Gold Inc. The Company's principal place of business and registered office is Brookfield Place, 181 Bay Street, Suite 3910, Toronto, Ontario M5J 2T3.

AuRico Gold Inc. ("**AuRico**") amalgamated with Alamos Gold Inc. ("**Former Alamos**") under section 182 of the *Business Corporations Act* (Ontario) ("**OBCA**") pursuant to Articles of Arrangement dated July 2, 2015, with the resulting amalgamated company continuing under the name Alamos Gold Inc. ("**Alamos**" or the "**Company**"). Alamos amalgamated with Richmont Mines Inc. (" **Richmont**") under section 182 of the OBCA pursuant to the articles of amalgamation dated August 1, 2018, with the resulting amalgamated company continuing under the name Alamos Gold Inc.

Alamos is a public company listed on the TSX and the NYSE under the symbol "AGI" and has a quoted market value of approximately CAD$7.35 billion as of March 25, 2024.

Intercorporate Relationships

In this AIF, unless the context otherwise requires, the terms "we", "us", "our", and similar terms, as well as references to "Alamos" or the "Company", refer to Alamos Gold Inc. The following diagram sets forth the Company's intercorporate relationships with its active subsidiaries including the jurisdiction of incorporation or organization and the Company's respective percentage ownership of each subsidiary.

GENERAL DEVELOPMENT OF THE BUSINESS

Alamos is a mining company engaged in the mining and extraction of, and exploration for, precious metals, primarily gold. Alamos owns and operates the Young-Davidson mine (referred to herein as the "**Young-Davidson Mine**" or "**Young-Davidson**"), the Island Gold mine (referred to herein as the "**Island Gold Mine**" or "**Island Gold**") in Ontario, Canada, and the Mulatos mine (the "**Mulatos Mine**") in the state of Sonora, Mexico. In 2023, the Young-Davidson Mine produced 185,100 ounces of gold, the Island Gold Mine produced 131,400 ounces of gold, and the Mulatos Mine produced 212,800 ounces of gold for total gold production in 2023 of 529,300 ounces. Alamos also owns the development-stage Lynn Lake Gold Project in Lynn Lake, Manitoba (referred to herein as the "**Lynn Lake Gold Project**" or "**Lynn Lake**"), the Ağı Dağı, Kirazlı, and Çamyurt Projects in the Biga district of northwestern Türkiye, and the option to acquire the Quartz Mountain Property in Oregon, United States of America ("**US**").

Three-Year History

- On January 27, 2021, the Company reported new results from surface and underground exploration drilling at its Island Gold Mine, further extending high-grade gold mineralization in Island Main, East, and West.
- On February 23, 2021, the Company reported its updated Mineral Reserves and Resources as of December 31, 2020, including an increase of Mineral Reserves and Resources at Island Gold by a combined 1.0 million ounces, net of mining depletion.
- On February 24, 2021, the Company announced a 25% increase in its quarterly dividend to US$0.025 per common share.
- On April 20, 2021, the Company announced that its Netherlands wholly-owned subsidiaries Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V. would file an investment treaty claim against the Republic of Türkiye for expropriation and unfair and inequitable treatment, among other things, with respect to their Turkish gold mining projects. The investment treaty claim was registered in June 2021 with the International Centre for Settlement of Investment Disputes (World Bank Group). As a result, the Company incurred an after-tax impairment charge of $213.8 million in the second quarter of 2021.
- On December 20, 2021, the Company announced the renewal of its NCIB to December 23, 2022.
- On February 22, 2022, the Company reported its updated Mineral Reserves and Resources as of December 31, 2021, including a 4% increase in global Mineral Reserves across all operations at 5% higher grades.
- On February 28, 2022, the Company announced that it had entered into a binding agreement to sell its non-core Esperanza Gold Project located in Morelos State, Mexico, to Zacatecas Silver Corp. for a total consideration of up to $60 million.
- On March 16, 2022, the Company announced that the Closure Plan Amendment for the Island Gold Mine had been filed by the Ontario Government.
- On May 19, 2022, the Company announced that it had entered into an automatic share purchase plan with a broker in order to facilitate repurchases of Alamos' Common Shares under its previously announced NCIB.
- On June 13, 2022, the Company announced a target of a 30% reduction in absolute greenhouse gas (" **GHG**") emissions by 2030 from the 2020/2021 average baseline year. This target includes scope 1 and scope 2 GHG emissions, inclusive of all GHG emissions covered by the Kyoto Protocol. This was a significant milestone in Alamos' sustainability journey and considered a credible target by definition of the Carbon Disclosure Project.
- On June 20, 2022, the Company announced initial gold production from the La Yaqui Grande mine, following the completion of construction, ahead of schedule.
- On June 28, 2022, the Company reported the results of the P3+ Expansion Study (" **P3+ Expansion Study**") conducted on its Island Gold Mine, located in Ontario, Canada. Based on the results of the P3+ Expansion Study, the Company is proceeding with an expansion of the operation to 2,400 tpd.

- On November 15, 2022, the Company reported new results from ongoing surface exploration drilling at Puerto Del Aire, extending high-grade gold mineralization outside of Mineral Reserves and Resources.

- On December 21, 2022, the Company announced the renewal of its NCIB to December 23, 2023.

- On December 22, 2022, the Company announced that it had entered into an agreement to sell a portfolio of non-core royalties to Metalla Royalty & Streaming Ltd. for proceeds of USD$5.0 million in Metalla common shares which closed on February 23, 2023.

- On February 21, 2023, the Company reported its updated Mineral Reserves and Resources as of December 31, 2022, including grades increasing 3%, reflecting higher grade additions at Island Gold and Mulatos. Mineral Reserve additions more than replaced depletion at a rate of 133%.

- On February 28, 2023, the Company announced that it had entered into a definitive agreement whereby the Company would acquire all of the issued and outstanding shares of Manitou Gold Inc. by way of a plan of arrangement.

- On March 6, 2023, the Company announced that the federal Environmental Impact Assessment for the Lynn Lake Gold Project had been completed, and a positive Decision Statement had been issued by the Minister of Environment and Climate Change Canada. As well, in accordance with *The Environment Act* (Manitoba), the Province of Manitoba issued Environment Act Licenses for the MacLellan and Gordon sites.

- On March 13, 2023, the Company announced that Greg Fisher, Senior Vice President of Finance, had been promoted to Chief Financial Officer, effective May 1, 2023.

- On May 24, 2023, the Company reported the completion of the previously announced acquisition of all the issued and outstanding common shares of Manitou Gold Inc.

- On May 31, 2023, the Company announced that it has filed a base shelf prospectus dated May 31, 2023 (the " **Base Shelf Prospectus**") with the Ontario Securities Commission. The Base Shelf Prospectus qualifies the issuance of up to US$500,000,000 (or the equivalent in other currencies) of Class A common shares, debt securities, warrants and subscription receipts (collectively, the "Securities") of the Company, or any combination thereof, in all of the provinces and territories of Canada, and the Registration Statement registers the Securities for offers and sales in the United States using the multijurisdictional disclosure system. The Base Shelf Prospectus is effective for a period of 25 months.

- On August 2, 2023, the Company reported the results from the updated Feasibility Study for the Lynn Lake Gold Project, which incorporates a 44% larger Mineral Reserve and a 14% increase in milling rates to 8,000 tpd, outlining a larger, longer-life, low-cost operation in Canada with attractive economics and significant exploration upside.

- On December 21, 2023, the Company announced the renewal of its NCIB to December 23, 2024.

- On January 15, 2024, the Company announced that it had entered into a definitive agreement pursuant to which Alamos will acquire all of the issued and outstanding shares of Orford Mining Corporation by way of a plan of arrangement.

- On February 20, 2024, Company reported its updated Mineral Reserves and Resources as of December 31, 2023, including grades increasing 1%, reflecting higher grade additions at Island Gold and Puerto Del Aire, and growth at Lynn Lake. Mineral Reserve additions more than replaced depletion at a rate of 132%.

Risk Factors

The following is a discussion of risk factors relevant to the Company's operations and future financial performance. Additional risks not currently known by the Company, or that the Company currently deems immaterial, may also impair the Company's operations. You should carefully consider the risks and uncertainties described below as well as the other information contained and incorporated by reference in this Annual Information Form.

The financing, exploration, development, and mining of any of the Company's properties are subject to a number of risk factors, including, among other things, the price of gold, laws and regulations, technical and geological risks inherent to mining

operations, political conditions, currency fluctuations, and the ability to hire qualified people and to obtain necessary services in jurisdictions where the Company operates. Before deciding to invest in securities of the Company, investors should consider carefully such risks and uncertainties.

Commodity and Currency Risks

In recent years, financial conditions have been characterized by volatility, which in turn has resulted in volatility in commodity prices and foreign exchange rates, significant inflation, tightening of the credit market, increased counterparty risk, and volatility in the prices of publicly traded entities. The volatility in commodity prices and foreign exchange rates directly impacts the Company's revenues, earnings, and cash flow.

The volatility of the price of gold and the price of other metals could have a negative impact on the Company's future operations.

The value of the Company's Mineral Resources and future operating profit and loss is significantly impacted by fluctuations in gold prices, over which the Company has no control. A reduction in the price of gold may prevent the Company's properties from being economically mined, reduce the Company's ability to generate cash flow to finance its operations and support development and expansion projects, or result in the write-off of assets whose value is impaired due to low gold prices. The price of gold may also have a significant influence on the market price of the Company's common shares. The price of gold is affected by numerous factors beyond the Company's control, such as the level of inflation, fluctuation of the United States dollar and foreign currencies, investment and physical demand, sale of gold by central banks, and the political and economic conditions of major gold producing countries throughout the world.

In addition to adversely affecting the Company's Mineral Reserve and Mineral Resource estimates and financial condition, declining metal prices can impact operations by requiring a reassessment of the feasibility of a particular project, and the Company may determine that it is not feasible to continue commercial production at some or all its current producing or development projects. Even if a project is ultimately determined to be economically viable, the need to conduct such a reassessment may cause substantial delays and/or may interrupt operations until the reassessment can be completed, which may have a material adverse effect on the results of operations and financial condition.

The Company regularly engages in commodity hedging transactions intended to reduce the risk associated with fluctuations in commodity prices; however, there is no assurance that any such commodity-hedging transactions designed to reduce the risk associated with fluctuations in metal prices will be successful. The Company's hedging program may not protect adequately against declines in the price of the hedged metal. Furthermore, although hedging may protect the Company from a decline in the price of the metal being hedged, it may also prevent it from benefiting from price increases.

The Company is subject to currency fluctuations that may adversely affect the financial position of the Company.

The Company is subject to currency risks. The Company's functional currency is the US dollar, which is exposed to fluctuations against other currencies. The Company's mining operations are located in Canada and Mexico, with additional development-stage assets in Canada, the United States, Mexico, and Türkiye, and as such, many of its expenditures and obligations are denominated in Canadian dollars, Mexican pesos, and to a lesser extent Turkish lira and Euros. The Company maintains its principal office in Toronto (Canada), maintains cash accounts in US dollars, Canadian dollars, Mexican pesos, and Turkish lira, and has monetary assets and liabilities in US dollars and Canadian dollars, Mexican pesos, and Turkish lira.

The Company's operating results and cash flow are significantly affected by changes in the US /Canadian dollar and US /Mexican peso exchange rates. Revenues are denominated in US dollars, while most expenses are currently denominated in Canadian dollars and Mexican pesos. Exchange rate movements can, therefore, have a significant impact on most of the Company's costs. The appreciation of non-US dollar currencies against the US dollar can increase the costs of production at Alamos' mines, making these mines less profitable.

From time to time, the Company may engage in foreign exchange hedging transactions intended to reduce the risk associated with fluctuations in foreign exchange rates, but there is no assurance that any such hedging transactions designed to reduce the risk associated with fluctuations in exchange rates will be successful and as such, operating costs and capital expenditures may be adversely impacted.

Financial, Finance, and Tax Risks

The Company's activities expose it to a variety of financial risks, including interest rate risk, credit risk, and liquidity risk. The Company's risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the Company's financial performance. The Company may use derivative financial instruments to hedge certain risk exposures. The Company does not purchase derivative financial instruments for speculative investment purposes.

The Company's revolving credit facility contains a number of restrictive covenants that impose significant operating and financial restrictions on the Company and may limit its ability to engage in acts that may be in the Company's long-term best interest.

If utilized, the Company's failure to comply with covenants in its revolving credit facility could result in an event of default, which, if not cured or waived, could result in the acceleration of such debt. The restrictions include, without limitation, restrictions on its ability to:

- Incur additional indebtedness;
- Pay dividends or make other distributions or repurchase or redeem its capital stock;
- Prepay, redeem or repurchase certain debt;
- Make loans and investments;
- Sell, transfer or otherwise dispose of assets;
- Incur or permit to exist certain liens;
- Enter into certain transactions with affiliates;
- Enter into agreements restricting its subsidiaries' ability to pay dividends; and
- Consolidate, amalgamate, merge or sell all or substantially all of the Company's assets.

Liquidity Risks

Liquidity risk arises through the excess of financial obligations due over available financial assets at any point in time. The Company's objective in managing liquidity risk is to maintain sufficient readily available cash reserves and credit in order to meet its liquidity requirements at any point in time. The total cost and planned timing of acquisitions and/or other development or construction projects is not currently determinable, and it is not currently known whether the Company will require external financing in future periods.

The Company is subject to taxation in multiple jurisdictions and adverse changes to the taxation laws of such jurisdictions could have a material adverse effect on its profitability.

The Company has operations and conducts business in multiple jurisdictions and it is subject to the taxation laws of each such jurisdiction. These taxation laws are complicated and subject to change. The Company may also be subject to review, audit, and assessment in the ordinary course. Any such changes in taxation law or reviews and assessments could result in higher taxes being payable or require payment of taxes due from previous years, which could adversely affect the Company's profitability. Taxes may also adversely affect the Company's ability to repatriate earnings and otherwise deploy its assets.

The Company may not be able to obtain the external financing necessary, including the issuance of shares, debt instruments, or other securities convertible into shares, to continue its exploration and development activities on its mineral properties.

The ability of the Company to continue the exploration and development of its property interests will be dependent upon its ability to increase and rely on revenues from its existing production and planned expansions and potentially raise significant additional financing thereafter. The sources of external financing that the Company may use for these purposes may include project debt, corporate debt, or equity offerings. The Company cannot predict the potential need or size of future issuances of common shares or the issuance of debt instruments or other securities convertible into shares or the effect, if any, that this would have on the market price of the Company's common shares. Any transaction involving the issuance of shares, or securities convertible into shares, could result in dilution, possibly substantial, to present and prospective security holders. Further, there is no assurance that the financing alternative chosen by the Company will be available to the Company, on favourable terms or at all. Depending on the alternative chosen, the Company may have less control over the management of its projects. There is no assurance that the Company will successfully increase revenues from existing and expanded production. Should the Company not be able to obtain such financing and increase its revenues, it may become unable to acquire and retain its exploration properties and carry out exploration and development on such properties, and its title interests in such properties may be adversely affected or lost entirely.

Production, Mining, and Operating Risks

The Company is, and expects to continue to be, dependent on three mines for all of its commercial production.

The Young-Davidson, Island Gold, and Mulatos Mines account for all of the Company's current commercial production and are expected to continue to account for all of its commercial production in the near term. Any adverse condition affecting

mining, processing conditions, labour relations, supply chains, expansion plans, or ongoing permitting at Young-Davidson, Island Gold, or Mulatos could have a material adverse effect on the Company's financial performance and results of operations.

Forecasts of future production are estimates based on interpretation and assumptions and actual production may be less than estimated.

The Company prepares estimates of future production for its operating mines. The Company cannot give any assurance that it will achieve its production estimates. The failure of the Company to achieve its production estimates could have a material and adverse effect on future cash flows, share price, profitability, results of operations, and financial condition. These production estimates are dependent on, among other things, the accuracy of Mineral Reserve estimates, leach pad inventory, assumptions with respect to development and expansion activities, the accuracy of assumptions regarding ore grades and recovery rates, ground conditions, physical characteristics of ores, such as hardness and the presence or absence of particular metallurgical characteristics and the accuracy of estimated rates and costs of mining and processing.

The Company's actual production may vary from its estimates for a variety of reasons, including: actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors such as the need for sequential development of orebodies and the processing of new or different ore grades from those planned; mine failures, slope failures or equipment failures; industrial accidents; continued adverse impacts resulting from COVID-19, and the potential impacts of any new epidemic or pandemic which may develop; natural phenomena (including consequences of climate change) such as inclement weather conditions, floods, droughts, wildfires, rock slides and earthquakes; encountering unusual or unexpected geological conditions; changes in power costs and potential power shortages or permitting challenges related to power; lack of adequate housing for workers; shortages of principal supplies needed for operation, including explosives, fuels, chemical reagents, water, equipment parts and lubricants; labour shortages or strikes; civil disobedience and protests; and restrictions or regulations imposed by government agencies or other changes in the regulatory environments. Such occurrences could result in damage to mineral properties, interruptions or delays in production, injury or death to persons, damage to property of the Company or others, monetary losses, and legal liabilities. These factors may cause a mineral deposit that has been mined profitably in the past to become unprofitable, forcing the Company to cease production. It is not unusual in new mining operations to experience unexpected problems during the start-up or expansion phase. Depending on the price of gold or other minerals, the Company may determine that it is impractical to commence or, if commenced, to continue commercial production at a particular site.

Mining operations and facilities are intensive users of electricity and carbon-based fuels. There can be no guarantee that the Company will be able to obtain all necessary permits or be able to enter into commercial arrangements for adequate electricity to conduct its future operations and expansion plans, including specifically the requirements for increased electricity capacity for any operational expansion at the Island Gold Mine. Energy prices can be affected by numerous factors beyond the Company's control, including global and regional supply and demand, political and economic conditions, and applicable regulatory regimes. The prices of various sources of energy may increase significantly from current levels. An increase in energy prices for which the Company is not hedged could materially adversely affect the results of operations and financial condition.

The Company's production costs are also affected by the prices of commodities consumed or used in operations, such as lime, cyanide, and explosives. The prices of such commodities are influenced by supply and demand trends affecting the mining industry in general and other factors outside the Company's control, such as inflation and ongoing and/or future supply chain challenges resulting from the COVID-19 pandemic. Increases in the price for materials consumed in mining and production activities could materially adversely affect the Company's results of operations and financial condition.

Risks and costs relating to development, ongoing construction, and changes to existing mining operations and development projects.

The Company's ability to meet development and production schedules and cost estimates for its development and expansion projects cannot be assured. Changes in key operating and capital costs could result in unexpected costs or uneconomic operations and development projects. Many of these factors are beyond the Company's control. Without limiting the generality of the foregoing, the Company has commenced an expansion of its operations (including the installation of a shaft, paste plant, and expansion of the mill and tailings facility) at its Island Gold Mine and is engaged in exploration and development activities at its Lynn Lake Gold Project in Manitoba. As a result of availability of supply and increasing economic inflation, the Company may experience significant increases in the price of labour, consumables and other raw materials and related manufactured goods, including steel. The Company may also experience delays due to any ongoing or new impacts of COVID-19, or any other epidemic or pandemic which may occur in the future, on personnel and contractor availability.

In addition to the foregoing, technical considerations, stakeholder engagement challenges (including as it pertains to First Nations communities surrounding Island Gold and Lynn Lake for the expansion and exploration projects there), delays in

obtaining governmental approvals, inability to obtain financing, or other factors, could cause delays in current mining operations or in developing properties. Such delays could materially affect the financial performance of the Company.

The Company prepares estimates of operating costs and/or capital costs for each operation and project. No assurance can be given that such estimates will be achieved. Failure to achieve cost estimates or material increases in costs could have an adverse impact on future cash flows, profitability, results of operations, and financial condition.

Development projects are uncertain, and it is possible that actual capital and operating costs and economic returns will differ significantly from those estimated for a project prior to production.

Alamos has a number of development-stage projects in Canada, Mexico, the United States, and Türkiye. Mine development projects require significant expenditures during the development phase before production is possible. Development projects are subject to the completion of successful feasibility studies and environmental assessments, issuance of necessary governmental licences and permits, availability of adequate financing, and, in the case of the Company's Turkish development stage projects, reaching an agreement with the Republic of Türkiye as to permitting, licensing and development. The economic feasibility of development projects is based on many factors, such as estimation of Mineral Reserves, anticipated metallurgical recoveries, environmental considerations and permitting, future gold prices, and anticipated capital and operating costs of these projects. The Company's development projects have no operating history upon which to base estimates of future production and cash operating costs. Particularly for development projects, estimates of Proven and Probable Mineral Reserves and cash operating costs are, to a large extent, based upon the interpretation of geologic data obtained from drill holes and other sampling techniques and feasibility studies that derive estimates of cash operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates of gold from the ore, estimated operating costs, anticipated climatic conditions, and other factors. As a result, it is possible that actual capital and operating costs and economic returns will differ significantly from those currently estimated for a project prior to production.

While not an exhaustive list, any of the following events could affect the profitability or economic feasibility of a project: unanticipated changes in grade and tonnes of ore to be mined and processed, unanticipated adverse geological conditions, unanticipated metallurgical recovery problems, incorrect data on which engineering assumptions are made, availability of labour, costs of processing and refining facilities, availability of economic sources of power, adequacy of water supply, availability of surface lands on which to locate processing and refining facilities, adequate access to the site, unanticipated transportation costs, government regulations and resource nationalism (including, but not limited to, regulations with respect to the environment, prices, royalties, duties, taxes, labour, permitting, restrictions on production, and quotas on exportation of minerals), fluctuations in gold prices, accidents, labour actions, and force majeure events.

It is not unusual in new mining operations to experience unexpected problems during the start-up phase, and delays can often occur at the start of production. It is likely that actual results for the Company's projects will differ from current estimates and assumptions, and these differences may be material. In addition, experience from actual mining or processing operations may identify new or unexpected conditions that could reduce production below, or increase capital or operating costs above, current estimates. If actual results are less favourable than currently estimated, the Company's business, results of operations, financial condition, and liquidity could be materially adversely affected.

The figures for the Company's Mineral Reserves and Mineral Resources are estimates based on interpretation and assumptions and may yield less mineral production under actual conditions than is currently estimated.

The Company must continually replace Mineral Reserves depleted by production to maintain production levels over the long term. Mineral Reserves can be replaced by expanding known orebodies, locating new deposits, or making acquisitions. Exploration is highly speculative in nature. Alamos' exploration projects involve many risks and are frequently unsuccessful. Once a site with mineralization is discovered, it may take several years from the initial phases of drilling until production is possible, during which time the economic feasibility of production may change.

The Company's Mineral Reserve and Mineral Resource estimates are estimates only and no assurance can be given that any particular level of recovery of gold or other minerals from Mineral Resources or Mineral Reserves will in fact be realized. There can also be no assurance that an identified mineral deposit will ever qualify as a commercially mineable (or viable) ore body that can be economically exploited. Additionally, no assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. These estimates may require adjustments or downward revisions based upon further exploration or development work or actual production experience.

Estimates of Mineral Resources and Mineral Reserves can also be affected by such factors as environmental permitting regulations and requirements, weather, environmental factors, unforeseen technical difficulties, unusual or unexpected geological formations, and work interruptions. In addition, the grade of ore ultimately mined may differ dramatically from that indicated by results of drilling, sampling, and other similar examinations. Short-term factors relating to Mineral Resources and

Mineral Reserves, such as the need for the orderly development of ore bodies or the processing of new or different grades, may also have an adverse effect on mining operations and on the results of operations.

Material changes in Mineral Resources and Mineral Reserves, grades, stripping ratios, or recovery rates may affect the economic viability of projects. There is a risk that depletion of Mineral Reserves will not be offset by discoveries, acquisitions, or the conversion of Mineral Resources into Mineral Reserves. The Mineral Reserve base of Alamos' mines may decline if Mineral Reserves are mined without adequate replacement and the Company may not be able to sustain production beyond the current mine lives, based on current production rates.

Mineral Resources and Mineral Reserves are reported as general indicators of mine life. Mineral Resources and Mineral Reserves should not be interpreted as assurances of mine life or the profitability of current or future operations. There is a degree of uncertainty attributable to the calculation and estimation of Mineral Resources and Mineral Reserves and corresponding grades being mined or dedicated to future production. Until ore is actually mined and processed, Mineral Reserves and grades must be considered as estimates only.

In addition, the quantity of Mineral Resources and Mineral Reserves may vary depending on metal prices. Extended declines in market prices for gold, silver, and copper may render portions of the Company's mineralization uneconomic and result in reduced reported mineralization. Any material change in Mineral Resources and Mineral Reserves, grades, or stripping ratios may affect the economic viability of the Company's projects.

Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. Mineral Resource estimates for properties that have not commenced production are based, in many instances, on limited and widely spaced drill hole information, which is not necessarily indicative of the conditions between and around drill holes. Accordingly, such Mineral Resource estimates may require revision as more drilling information becomes available or as actual production experience is gained. No assurance can be given that all or any part of Mineral Resources constitute or will be converted into Mineral Reserves.

Legal, Permitting, Regulatory, Title, and Political Risks

The Company's operating and development properties are located in jurisdictions that are subject to changes in economic and political conditions and regulations in those countries.

The economics of the mining and extraction of precious metals are affected by many factors, including the costs of mining and processing operations, variations in grade of ore discovered or mined, fluctuations in metal prices, foreign exchange rates and the prices of goods and services, applicable laws and regulations, including regulations relating to royalties, allowable production and importing and exporting goods and services. Depending on the price of minerals, the Company may determine that it is neither profitable nor advisable to acquire or develop properties, or to continue mining activities.

The Company's mineral properties are located in Canada, Mexico, Türkiye, and the United States. Economic, legal, and political conditions in these countries could adversely affect the business activities of the Company. These conditions are beyond the Company's control, and there can be no assurances that any mitigating actions by the Company will be effective.

Changing laws, regulations, and restrictions relating to the mining industry or shifts in political conditions may increase the costs related to the Company's activities, including the cost of maintaining its properties. Operations may also be affected to varying degrees by changes in government legislation and regulations with respect to restrictions on production, price controls, export controls, permitting, licensing, income taxes, royalties, expropriation of property, the environment (including specifically enacted legislation to address climate change), labour and mine safety. In 2021, the Mexican government announced restrictions and increased environmental reviews of the mining sector, resulting in uncertainty with respect to the timing of regulatory approvals, overall permitting of future open-pit mines and a prohibition on the acquisition of new mining concessions. In May 2023, the Mexican Congress approved a decree that amended the Mexican mining regulation, which allows the Mexican State to strongly control new mining activity in Mexico, increasing obligations and restrictions.

The effect of these factors cannot be accurately predicted. Economic instability could result from current global economic conditions and could contribute to currency volatility and potential increases in income tax rates, both of which could significantly impact the Company's profitability.

The Company's activities are subject to extensive laws and regulations governing worker health and safety, employment standards, waste disposal, protection of historic and archaeological sites, mine development, protection of endangered and protected species, and other matters. Regulators have broad authority to shut down and/or levy fines against facilities that do not comply with regulations or standards.

Risk factors specific to certain jurisdictions are described throughout, including specifically: “Risks related to development-stage assets in Türkiye and related Investment Treaty Arbitration”, “Water Management at the Company’s Mining operations”, “Security in Mexico” and “The Company will be unable to undertake its required drilling and other development work on its properties if all necessary permits and licences are not granted.” The occurrence of the various factors and uncertainties related to economic and political risks of operating in the Company’s jurisdictions cannot be accurately predicted and could have a material adverse effect on the Company’s operations or profitability.

The Company will be unable to undertake its required drilling and other development work on its properties if all necessary permits and licences are not granted.

The Company requires a number of approvals, licences, and permits for various aspects of its exploration, development and expansion. The Company is uncertain if all necessary permits will be maintained or obtained on acceptable terms or in a timely manner. Future changes in applicable laws and regulations or changes in their enforcement or regulatory interpretation could negatively impact current or planned exploration and development activities or any other projects with which the Company becomes involved. Any failure to comply with applicable laws and regulations or failure to obtain or maintain permits or licences, even if inadvertent, could result in the interruption of production, exploration or development, or material fines, penalties, or other liabilities. It remains uncertain if the Company’s existing permits or licences may be affected in the future or if the Company will have difficulties in obtaining all necessary permits and licences that it requires for its proposed or existing mining activities.

In order to maintain mining operating and/or exploration licences in good standing, operating and/or exploration licence holders must advance their projects efficiently, including by obtaining the necessary permits prior to stipulated deadlines. The Company has implemented plans to obtain all necessary permits and licences prior to the relevant deadlines. While the Company is confident in its ability to meet all required deadlines or milestones so as to maintain its licences in good standing, there is a risk that the relevant permitting and licensing authorities will not respond in a timely manner. There is no guarantee that the Company will be able to obtain the approvals, licences and permits as planned or, if unable to meet such deadlines, that negotiations for an extension will be successful in maintaining its permits and licences in good standing.

Security in Mexico.

In recent years, criminal activity and violence have increased and continue to increase in parts of Mexico. The mining sector has not been immune to the impact of criminal activity and violence, including in the form of kidnapping for ransom and extortion by organized crime, direct armed robberies of mining operations, and the theft and robbery of supply convoys, including specifically for diesel. In April 2020, the Company suffered an armed robbery at its Mulatos Mine. There were no injuries, and the value of the loss was ultimately recovered. Ore from operations at La Yaqui Grande is required to be transported by truck to Mulatos for processing, which requires the use of community roads, leading to an increased risk of theft. The Company maintains insurance and takes measures to protect employees, property, and production facilities from these and other security risks. There can be no assurance, however, that security incidents will not occur in the future, or that if they do, they will not have a material adverse effect on the Company’s operations.

Risk related to development-stage assets in Türkiye and related Investment Treaty Arbitration.

The Company, indirectly through subsidiaries, holds development stage mineral properties located in Türkiye. Economic and political conditions in Türkiye are adversely impacting the business activities of the Company. On October 14, 2019, the Company reported that it had suspended all construction activities at its Kirazlı Project in Türkiye pending the renewal of its mining operating licences, which expired on October 13, 2019. On October 16, 2020, the Company received notice that the Turkish government would not be renewing the Company’s Forestry Permits for the Kirazlı Project because the mining operating licence had not been restored within a one-year timeframe of its expiry. The Forestry Permits and mining operating licence, among other regulatory requirements, have not subsequently been restored, and there is no guarantee that the Company will ever have the required licences and permits to operate in Türkiye.

On April 20, 2021, as a result of the Turkish government’s actions in respect of the Company’s projects in the Republic of Türkiye, the Company’s wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A. and Alamos Gold Holdings B.V., announced the filing of a bilateral investment treaty claim (the “**BIT Claim**”) against the Republic of Türkiye for expropriation and unfair and inequitable treatment, among other things. The BIT Claim was registered in June 2021 with the International Centre for Settlement of Investment Disputes (World Bank Group). As a result, the Company incurred an after-tax impairment charge of $213.8 million in the second quarter of 2021.

The BIT Claim may not be effective or successful. If unsuccessful, the Company’s projects in Türkiye may be subject to resource nationalism and further expropriation; the Company may lose any remaining value of its assets and gold mining projects in Türkiye and its ability to operate in Türkiye or to put any of the Kirazli, Ağı Dağı or Çamyurt sites into production,

resulting in the Company removing those three projects from its Total Mineral Reserves and Resources. If the BIT Claim is successful, there is no certainty as to the quantum or timing of any damages award or recovery of all, or any, legal costs. Any resumption of activities in Türkiye, or even retaining control of the Company's assets and gold mining projects in Türkiye, can only result from reaching an agreement with the Turkish government. Other factors related to the Turkish economy, including but not limited to high rates of inflation and fluctuation in the Turkish Lira may also affect the Company's ability to effectively operate in Türkiye and could have a negative effect on overall anticipated project values.

Litigation could be brought against the Company and the resolution of current or future legal proceedings or disputes may have a material adverse effect on the Company's future cash flows, results of operations, or financial condition.

The Company could be subject to legal claims and/or complaints and disputes that result in litigation, including unexpected environmental remediation costs, arising out of the normal course of business. The results of ongoing litigation cannot be predicted with certainty. The costs of defending and settling litigation can be significant, even for claims that Alamos believes have no merit. There is a risk that if such claims are determined adversely to the Company, they could have a material adverse effect on the Company's financial performance, cash flow, and results of operations.

Some of the Company's mineral assets are located outside of Canada and are held indirectly through foreign affiliates.

It may be difficult, if not impossible, to enforce judgments obtained in Canadian courts predicated upon the civil liability provisions of the securities laws of certain provinces against the Company's assets that are located outside of Canada.

Failure of the Company to comply with laws and regulations could negatively impact current or planned mining activities and exploration and developmental activities.

The Company's mining, exploration, and development activities are subject to extensive laws and regulations concerning the environment, worker health and safety, employment standards, waste disposal, mine development, mine operation, mine closure, reclamation, and other matters. The Company requires permits and approvals from various regulatory authorities for many aspects of mine development, operation, closure, and reclamation. In addition to meeting the requirements necessary to obtain such permits and approvals, they may be invalidated if the applicable regulatory authority is legally challenged that it did not lawfully issue such permits and approvals. The ability of the Company to obtain and maintain permits and approvals and to successfully develop and operate mines may be adversely affected by real or perceived impacts associated with its activities that affect the environment and human health and safety at its development projects and operations and in the surrounding communities. The real or perceived impacts of the activities of other mining companies may also adversely affect the Company's ability to obtain and maintain permits and approvals. The Company is uncertain as to whether all necessary permits will be maintained on acceptable terms or in a timely manner. Future changes in applicable laws and regulations or changes in their enforcement or regulatory interpretation could negatively affect current or planned mining, exploration, and developmental activities on the projects in which the Company is or may become involved. Any failure to comply with applicable laws and regulations or to obtain or maintain permits, even if inadvertent, could result in the interruption of mining, exploration, and developmental operations or in material fines, penalties, clean-up costs, damages, and the loss of key permits or approvals. While the Company has taken great care to ensure full compliance with its legal obligations, there can be no assurance that the Company has been or will be in full compliance with all of these laws and regulations, or with all permits and approvals that it is required to have. Environmental and regulatory review has also become a long, complex, and uncertain process that can cause potentially significant delays.

The Company cannot guarantee that title to its properties will not be challenged.

The validity of the Company's mining claims and access rights can be uncertain and may be contested. Although the Company is satisfied it has taken reasonable measures to acquire the rights needed to undertake its operations and activities as currently conducted, some risk exists that some titles and access rights may be defective. No assurance can be given that such claims are not subject to prior unregistered agreements or interests or to undetected or other claims or interests which could be materially adverse to the Company. While the Company has used its best efforts to ensure title to all its properties and secured access to surface rights, these titles or rights may be disputed, which could result in costly litigation or disruption of operations. From time to time, a land possessor may dispute the Company's surface access rights, and, as a result, the Company may be barred from its legal occupation rights. Surface access issues have the potential to result in the delay of planned exploration programs, and these delays may be significant. The Company expects that it will be able to resolve these issues, however, there can be no assurance that this will be the case.

Additional future property acquisitions, relocation benefits, legal and related costs may be material. The Company may need to enter into negotiations with landowners and other groups in the host communities where its projects are located in order to conduct future exploration and development work. The Company cannot currently determine the expected timing, outcome of such negotiations, or costs associated with the relocation of property owners and possessors and potential land acquisitions.

There is no assurance that future discussions and negotiations will result in agreements with landowners or other local community groups so as to enable the Company to conduct exploration and development work on these projects.

The Company provides significant economic and social benefits to its host communities and countries, which facilitates broad stakeholder support for its operations and projects. There is no guarantee; however, that local residents will support our operations or projects.

Relationships with Key Stakeholders

Indigenous title claims, rights to consultation/accommodation, and the Company's relationship with local communities may affect the Company's existing operations and development projects.

Governments in many jurisdictions must consult with indigenous peoples and nations with respect to grants of mineral rights and the issuance or amendment of project authorizations. Consultation and other rights of indigenous peoples and nations may require accommodations, including undertakings regarding employment, training, business opportunities, royalty payments, and other matters. This may affect the Company's ability to acquire, within a reasonable time frame, effective mineral titles in these jurisdictions, including in some parts of Canada, in which indigenous title is claimed, and may affect the timetable and costs of development of mineral properties or expansion of existing operations in these jurisdictions, including specifically with respect to the Company's Island Gold Mine P3+ Expansion and its Lynn Lake Gold Project. Under applicable environmental and related mine permitting legislation, both Canadian federal and provincial governments may require indigenous consultation requirements beyond the scope expected by the Company. The risk of unforeseen indigenous title claims could also affect existing operations as well as development projects. These legal requirements may also affect the Company's ability to expand or transfer existing operations or to develop new projects. In April 2023, the Mathias Colomb Cree Nation ("MCCN") brought an application for judicial review of the positive Decision Statement issued by the Ministry of Environment and Climate Change Canada in respect of the Lynn Lake Gold Project and a corresponding internal appeal of the Environment Act Licences issued by the Province of Manitoba for the project. At this time, the application and appeal are not expected to impact overall Lynn Lake project timelines. The Company continues to actively engage with MCCN during this period.

The Company's relationship with the communities in which it operates is critical to ensure the future success of its existing operations and the construction and development of its projects. There is an increasing level of public concern relating to the perceived effect of mining activities on the environment and on communities impacted by such activities. Adverse publicity relating to the mining industry generated by non-governmental organizations and others could have an adverse effect on the Company's reputation or financial condition and may impact its relationship with the communities in which it operates. While the Company is committed to operating in a socially responsible manner, there is no guarantee that the Company's efforts in this regard will mitigate this potential risk.

The inability of the Company to maintain positive relationships with local communities and indigenous First Nations, including specifically with respect to the Company's Canadian expansion or development-stage assets, may result in additional obstacles and timelines with respect to permitting, increased legal challenges, or other disruptive operational issues at any of the Company's operating mines, and could have a significant adverse impact on the Company's ability to generate cash flow, with a corresponding adverse impact to the Company's share price and financial condition.

Exploration, development, and production at the Company's mining operations are dependent upon the efforts of its key personnel and its relations with its employees and any labor unions that represent employees.

The Company's success is heavily dependent on its relationships with key personnel and on the ability to motivate, retain and attract highly skilled employees.

Relations between the Company and its employees (and, where applicable, their representative unions) may be affected by changes in the scheme of labour relations that may be introduced by Mexican or Canadian governmental authorities in whose jurisdictions the Company carries on operations. Such changes include, but are not limited to, changes in labour laws, outsourcing laws, social security laws, and employment standards. Changes in such legislation or in the relationship between the Company and its employees or their unions may have a material adverse effect on the Company's business, results of operations, and financial condition. For example, in April 2021, the Mexican Congress approved a bill to amend various federal laws, including the Federal Labour Law. This change has, for the most part, severely regulated the use of service companies in Mexico, a structure commonly used in the mining sector that provides outsourced labour and required companies like Alamos to hire its employees directly, resulting in a requirement to pay profit-sharing required by Mexican laws to those employees, or the obligation to contract only contractors registered before the Labour Authorities in Mexico that authorizes them to provide a specific service. Based on the Company's assessment, this change has not and is not expected to have a material impact on Alamos. Nonetheless, the risk exists that certain contractors could be deemed service companies, which could potentially have a significant financial impact. The full impact and enforcement of future changes are not known.

In addition, the Company anticipates that as it expands its existing production and brings additional properties into production and as the Company acquires additional mineral rights, the Company may experience significant growth in its operations. This growth may create new positions and responsibilities for management personnel and increase demands on its operating and financial systems, as well as require the hiring of a significant number of additional operations personnel. There can be no assurance that the Company will successfully meet these demands and effectively attract and retain any such additional qualified personnel. The failure to attract and retain such qualified personnel to manage growth effectively could have a material adverse effect on the Company's business, financial condition, or results of operations.

Companies today are at a much greater risk of losing control over how they are perceived as a result of social media and other web-based applications.

Damage to the Company's reputation can be the result of the actual or perceived occurrence of any number of events and could include any negative publicity, whether true or not. Although the Company places a great emphasis on protecting its image and reputation, it does not ultimately have direct control over how it is perceived by others. Reputation loss, including specifically as a result of social media misinformation campaigns targeting the Company's development projects in Türkiye, may lead to increased and continued challenges in developing and maintaining community relations, decreased investor confidence, and act as an impediment to the Company's overall ability to advance its projects, thereby having a material adverse impact on financial performance, cash flows, and growth prospects.

The Company's directors and officers may have interests that conflict with the Company's interests.

Certain of the Company's directors and officers serve as directors or officers of other public companies and as such it is possible that a conflict may arise between their duties as the Company's directors or officers and their duties as directors or officers of these other companies.

Health and Environmental Risks

Alamos' operations may be exposed to serious illness.

Any ongoing or future impacts of COVID-19, along with any other potential serious illness, epidemic or pandemic, could have material adverse impacts on the Company's ability to operate and meet expected timelines for development and expansion projects (e.g., the P3+ Expansion project at the Island Gold Mine) due to employee absences, disruption in supply chains, information technology system constraints, government interventions, market volatility, overall economic uncertainty and other factors currently unknown and not anticipated. Any such disruptions could potentially cause gold sales disruptions and could impact the ability to meet production, cost, and capital guidance. Alamos' operations are located in relatively remote areas. The Company relies on various modes of transportation to house its employees, move around its people, its product, and the necessary supplies and inputs for its operations. At both Mulatos and Island Gold, the Company has a high concentration of personnel working and residing in close proximity to one another at the mine site (camps). Should an employee or visitor become infected with a serious illness that has the potential to spread rapidly, this could place Alamos' workforce at risk. The Company takes every precaution to strictly follow industrial hygiene and occupational health guidelines. Approximately 50% of the Island Gold workforce comes from the local communities, with the other 50% housed in a camp within the town of Dubreuilville and operating on a fly-in, fly-out basis from various other regions. In 2020, the Company experienced several outbreaks of COVID-19 at its mining operations, resulting in, among other things, temporary closure of mining operations. There were no closures in 2021, 2022 or 2023; however, there continues to be a risk that a virus outbreak could occur again at any operating sites or in the local community, which could result in the temporary closure of the Company's operations. If any outbreaks occur, the government could order temporary suspensions requiring a shutdown of mining operations. Consequently, there can be no assurance that COVID-19 or another infectious illness will not materially impact Alamos' personnel and ultimately, its operation, cash flows, or financial condition.

The Company's activities are subject to environmental laws and regulations that may increase its costs of doing business and restrict its operations.

The Company's exploration and production activities are subject to regulation by governmental agencies under various environmental laws. These laws address noise, air emissions, water discharges, waste management, management of hazardous substances, management of tailings facilities, protection of natural resources, antiquities and endangered species, and reclamation of lands disturbed by mining operations. Environmental legislation in many countries is evolving, and the trend has been towards stricter standards and enforcement, increased fines, penalties, and potential for facilities to be shut-down for non-compliance, more stringent environmental assessments of proposed projects, and increasing responsibility for companies and their officers, directors, and employees. Compliance with environmental laws and regulations may require significant capital outlays on behalf of the Company and may cause material changes or delays in the Company's intended activities. There can be no assurance that future changes in environmental regulations will not adversely affect the Company's business, and it is

possible that future changes in these laws or regulations could have a significant adverse impact on some portion of the Company's business, causing the Company to re-evaluate those activities at that time.

Failure to comply with such laws and regulations can have serious consequences, including damage to the Company's reputation, stopping the Company from proceeding with the development of a project, negatively impacting the operation or further development of a mine, increasing the cost of development or production and litigation and regulatory actions against the Company. The Company cannot give any assurance that, notwithstanding its precautions, breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its financial condition and its results from operations. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Company's operations. Environmental hazards may exist on the properties on which the Company holds interests that are unknown to the Company at present and which have been caused by previous or existing owners or operators of the properties. The Company may also acquire properties with known or undiscovered environmental risks. Any indemnification from the entity from which the Company has acquired such properties may not be adequate to pay all the fines, penalties, and costs (such as clean-up and restoration costs) incurred related to such properties. Some of the Company's properties also have been used for mining and related operations for many years before acquisition and were acquired as is or with assumed environmental liabilities from previous owners or operators.

The Company's failure to comply with applicable laws, regulations, and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. The Company may be required to compensate those suffering loss or damage by reason of its operations and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Production at certain of the Company's mines involves the use of various chemicals, including cyanide, which is a toxic material. Should cyanide or other toxic chemicals leak or otherwise be discharged from the containment system, the Company may become subject to liability for cleanup work that may not be insured. While appropriate steps will be taken to prevent discharges of pollutants into the groundwater and the environment, the Company may become subject to liability for hazards that it may not be insured against, and such liability could be material.

Actual costs of reclamation are uncertain, and higher than expected costs could negatively impact the results of operations and financial position.

Land reclamation requirements are generally imposed on mineral exploration companies (as well as companies with mining operations) in order to minimize the long-term effects of land disturbance, and the Company is subject to such requirements at its mineral properties. Decommissioning liabilities include requirements to control the dispersion of potentially deleterious effluents and to reasonably re-establish pre-disturbance landforms and vegetation.

In order to carry out reclamation obligations arising from exploration, potential development activities, and mining operations, the Company must allocate financial resources that might otherwise be spent on further exploration and development programs. Reclamation costs are uncertain, and planned expenditures may differ from the actual expenditures required. If the Company is required to carry out unanticipated reclamation work, its financial position could be adversely affected.

Water management at the Company's mining operations.

The water collection, treatment, and disposal operations at the Company's mines are subject to substantial regulation and involve significant environmental risks. If collection or management systems fail, overflow, or do not operate properly, untreated water or other contaminants could spill onto nearby properties or into nearby streams and rivers, causing damage to persons or property, injury to aquatic life, and economic damages.

Environmental and regulatory authorities in Mexico and Canada conduct periodic or annual inspections of the Young-Davidson, Island Gold, and Mulatos Mines. As a result of these inspections, the Company is, from time to time, required to modify its water management program, complete additional monitoring work or take remedial actions with respect to the Company's operations as it pertains to water management.

Liabilities resulting from damage, regulatory orders or demands, or similar, could adversely and materially affect the Company's business, results of operations, and financial condition. Moreover, in the event that the Company is deemed liable for any damage caused by overflow, the Company's losses or consequences of regulatory action might not be covered by insurance policies.

Problems with water sources could have a negative impact on the Company's exploration programs and future operations.

The Company may not be able to secure the water necessary to conduct its activities as planned due to the potential for competing interests and demand for water, or due to the potential impact of drought and dry spells on water availability within local river basins, lakes, or aquifers. The Company will strive to ensure that its activities do not adversely impact the natural environment, community water sources and will seek to minimize freshwater withdrawals whenever possible. Future operations and activities may require that alternate water sources be provided to potentially affected communities at the Company's expense.

Climate Change Risks and Strategy

The Company's mining and processing operations are energy-intensive, resulting in a significant carbon footprint. The Company acknowledges climate change as an international and community concern and recognizes that its operations are subject to extensive transition and physical climate-related risks. As the Company adopts the recommendations of the Taskforce on Climate-related Financial Disclosure ("**TCFD**"), it has expanded its disclosure beyond climate-related risks to also address climate governance, strategy, risk management, metrics, and targets.

Transition and Physical Climate-Related Risks.

Transition risks are associated with society's transition to a low-carbon economy. These risks are highly uncertain and may have an adverse effect on Company operations. Alamos operates in Canada and Mexico where both countries are signatories to the Paris Agreement to limit the global average temperature rise below 2 degrees Celsius and pursue efforts to limit the increase to 1.5 degrees Celsius. Both Canada and Mexico have implemented regulations to monitor, report and/or reduce GHG emissions, and the costs required to comply are not anticipated to have a material adverse effect on the Company's operations. In Canada, Young-Davidson and Island Gold previously reported emissions under the Output-Based Pricing System ("**OBPS**") and effective January 1, 2022, transitioned to the Ontario Emissions Performance Standard (" **EPS**"). The EPS sets the price of excess emission units in lockstep with the federal backstop carbon price, which was CAD $65 per tonne of carbon dioxide equivalent ("**CO_2e**") in 2023 and is expected to increase to CAD $170 per tonne by 2030. Both Island Gold and Young-Davidson fall significantly below the emissions threshold for covered facilities under the EPS, though benefit by voluntarily opting in and avoiding the fuel charge component of the federal carbon pollution pricing system. The Company's planned Lynn Lake Gold Project in Northern Manitoba will be an open pit mine and once operational is expected to be a significant energy consumer and exceed the threshold for reporting under the OBPS. As such, the carbon price is a significant and growing financial risk. The life of mine carbon cost under the OBPS was initially estimated to be CAD $63 million, though the Company is actively assessing electrification opportunities that it anticipates will reduce the cost to approximately CAD $38 million.

In Mexico, a carbon tax applies to fossil fuels across all sectors at rates of approximately (for diesel) USD$4.00 per tonne of CO_2e. A carbon market pilot led by the Mexican Ministry of Environment and Natural Resources began in January 2020 and transitioned to an Emission Trading System ("**ETS**") in 2023 but it is not anticipated to affect the Mulatos Mine as the ETS targets facilities generating over 100,000 tonnes CO_2e per year from fixed sources. No carbon price has been established yet, and the political uncertainty about future climate and energy policy is high. Costs to comply with current and future regulations are difficult to predict. Government requirements and regulations may be amended, become more stringent, or have other effects on the Company, such as incremental increases in fuel prices, accelerating the adoption of lower-carbon technologies, and electrification. Difficulties in integrating new technologies with existing systems, such as electric mining equipment, or the cost and unproven nature of new technology could have a material adverse effect on the Company's financial performance and its operational results.

Physical risks are associated with the physical effects of climate change on the Company. Physical risks can be event-driven (acute) or longer-term shifts (chronic) in climate patterns. These risks are highly uncertain, are particular to the unique geographic circumstances associated with each site and may have an adverse effect on Company operations. The Company has qualitatively assessed the impact of climate risks on its operations and development projects, using climate scenarios to project changes to climate indicators under 2˚C and 4˚C scenarios. The Company identified several risks and opportunities based on projected increases in the frequency and intensity of warm spells, cold spells, heavy precipitation, storms, wildfires, floods, and drought that can each impact Company assets and result in disruptions to mine permitting, operations, ore extraction, and mine closure, or impact employee safety and the local environment. The Company assessed risks at its Island Gold, Young-Davidson, and Mulatos Mines, and one physical risk affecting the Mulatos Mine was determined to have a potential material financial impact on the Company. Mulatos is located in northwest Mexico where prolonged drought conditions are projected to increase, potentially affecting the availability of freshwater withdrawals for mining, processing, and refining activities in the dry season. In response, the Mulatos Mine is using existing water models to improve water management, updating engineering models to improve water efficiency, constructing a water treatment plant for La Yaqui Grande, and investigating options to

reuse existing mine infrastructure as water reservoirs, which could increase the cost of treating water before and after use. While the Company has taken measures to mitigate the impact of weather on its operations, severe weather events and prolonged drought - particularly in northwest Mexico - could have an adverse impact on the Company's ability to achieve production forecasts. In Q4 2023, Alamos began work to update its climate scenario analysis and risk assessment to further evaluate the effects of material risks/opportunities on Alamos' strategy and financial position, financial performance and cash flows over the short, medium and long-term. This exercise shall be completed in H1 2024.

Climate Change Governance.

The Company's commitment to protecting and preserving land, air, water, and energy resources is stated in the Company's Sustainability Policy. The Technical and Sustainability Committee of the Board (the "**T&S Committee**") provides oversight of climate change and climate-related impacts, including GHG emissions, energy use, and water management. In 2023, Alamos formalized its Climate Change Working Group, consisting of corporate representatives, mine site representatives, and development project representatives. The Working Group is tasked with ensuring the implementation of the Company's Energy & Greenhouse Gas Management Standard, the deployment of Alamos' emissions reduction strategy, and the consistent measurement of energy use and GHG emissions across the Company. The Energy & Greenhouse Gas Management Standard informs the Company's actions to reduce emission intensity, energy-related costs and mitigate risks related to climate change, energy security, supply, and cost. Accountable persons at each Company site are responsible for implementing the Standard and helping the Company meet its climate-related objectives and targets. Energy and climate performance are reported on an annual basis and included in the Company's public Environmental, Social and Governance ("ESG") reporting.

In 2023, Alamos also established its Climate Change Steering Committee, which provides strategic guidance and builds consensus on the development of new climate-related guidelines. The Steering Committee is made up of members of Alamos' senior management team. Associated duties include reviewing the progress of the Climate Change Working Group in achieving Company goals. The Steering Committee communicates progress against goals and targets to the Board via the Technical and Sustainability Committee and Audit Committee three to four times per year.

Climate Change Risk Management.

Alamos identifies and manages major risks, including significant climate-related risks, to the Company and its mine sites. The Enterprise Risk Management process provides senior management and the Board with updates on the key material risks facing the Company along with details of the risk assessments and corresponding management plans. Climate-related risks are integrated into the Company's Enterprise Risk Management process.

In 2020, the Company conducted an independent climate risk assessment to identify transition and physical risks affecting Company operations and development projects. Risks were determined by literature reviews, site interviews, peer reviews, and professional experience, and then analyzed based on future climate risk (i.e., the projected changes to climate-related factors impacting the system). Two climate scenarios were used: RCP8.5 to assess physical risks to Company sites, and the IEA Sustainable Development Scenario to assess transition risks to Company operations. A 20-year planning horizon was used (2030-2040), aligned with the current life of mine for Company assets and allowing for meaningful comparison of scenarios for transition and physical risks under a similar time horizon. Physical risk indicators included water stress, drought, cold and warm spells, precipitation, wind, temperature, wildfire, and floods. Transition risk indicators included GHG emission regulations, renewable electricity generation shares, cost of renewable energy, cost of abatement, cost of fuels, fossil fuel subsidies, and carbon reduction policies. Climate-related risks were validated with Company sites and management, including assessments on likelihood, consequence, risk rating, and the effectiveness of existing controls. Climate-related risks are integrated into site and corporate risk registers for integration within strategic planning and enterprise risk management and are periodically reviewed and assessed based on on-site changes and the availability of new, improved data.

In mid-2022, Alamos released its target to reduce absolute GHG emissions by 30% compared to its 2020/21 average base year. The Company developed an implementation roadmap to meet this target, with very specific projects identified and costed. In mid-2023, Alamos published its inaugural Climate Change Report that describes further the Company's climate-related governance, strategy, risk management, metrics and targets to meet the requirements of the TCFD.

Insurance and Compliance Risks

The Company may not have sufficient insurance coverage.

The mining industry is subject to significant risks that could result in damage to, or destruction of, mineral properties or producing facilities, personal injury or death, environmental damage, delays in mining, monetary losses, and possible legal liability.

The Company's insurance policies may not provide sufficient coverage for losses related to these or other risks. The Company's insurance does not cover all risks that may result in loss or damages and may not be adequate to reimburse the Company for all losses sustained. In particular, the Company does not have coverage for certain environmental losses or certain types of earthquake damage. The occurrence of losses or damage not covered by insurance could have a material and adverse effect on the Company's cash flows, results of operation, and financial condition.

The Company's business involves uninsurable risks.

In the course of exploration, development, and production of mineral properties, certain risks and, in particular, unexpected or unusual geological operating conditions including cave-ins, fires, flooding, and earthquakes, may occur. It is not always possible to fully insure against such risks and the Company may decide not to take out insurance against such risks as a result of high premiums or other reasons. Should such liabilities arise, they could reduce or eliminate any future profitability and result in increased costs and a decline in the value of the securities of the Company.

The Company may fail to maintain the adequacy of internal control over financial reporting as per the requirements of the Sarbanes-Oxley Act of 2002 ("SOX").

The Company has documented and tested, during its most recent fiscal year, its internal control procedures in order to satisfy the requirements of Section 404 of SOX. Both SOX and Canadian legislation require an annual assessment by management of the effectiveness of the Company's internal control over financial reporting.

The Company may fail to maintain the adequacy of its internal control over financial reporting as such standards are modified, supplemented, or amended from time to time, and the Company may not be able to ensure that it can conclude on an ongoing basis that it has effective internal controls over financial reporting. The Company's failure to satisfy the requirements of Section 404 of SOX and equivalent Canadian legislation on an ongoing, timely basis could result in the loss of investor confidence in the reliability of its financial statements, which in turn could harm the Company's business and negatively impact the trading price of the Company's common shares or market value of its other securities. In addition, any failure to implement required new or improved controls, or difficulties encountered in their implementation could harm the Company's operating results or cause it to fail to meet its reporting obligations.

The Company may be impacted by Anti-Bribery, Anti-Corruption, and related business conduct laws.

The Canadian *Corruption of Foreign Public Officials Act* and the US *Foreign Corrupt Practices Act* and anti-bribery and anti-corruption laws in other jurisdictions where the Company does business, prohibit companies and their intermediaries from making improper payments for the purposes of obtaining or retaining business or other commercial advantages. The Company's policies, including without limitation its Anti-Bribery, Anti-Corruption and Anti-Competition policy and its Code of Business Conduct and Ethics, mandate compliance with these laws, the failure of which often carry substantial penalties. The Company operates in jurisdictions that have experienced governmental and private sector corruption to some degree, and, in certain circumstances, strict compliance with laws may conflict with certain local customs and practices. There can be no assurances that the Company's internal control policies and procedures will always protect it from reckless or other inappropriate acts committed by the Company's affiliates, employees, or agents. Violations of these laws, or allegations of such violations, could have a material adverse effect on the Company's business, financial position, and results of operations.

Alamos' critical operating systems may be compromised.

Cyber threats, including fraud resulting from cyber threats, have evolved in severity, frequency, and sophistication in recent years, and target entities are no longer primarily from the financial or retail sectors. Individuals engaging in cybercrime may target corruption of systems or data or theft of sensitive data. While the Company invests in robust security systems to detect and block inappropriate or illegal access to its key systems, including supervisory control and data acquisition operating systems at its operations, and regularly reviews policies, procedures, and protocols to ensure data and system integrity, there can be no assurance that critical systems will not be inadvertently or intentionally breached and compromised. This may result in business interruption losses, equipment damage, or loss of critical or sensitive information.

Senior leadership briefs the Company's Audit Committee on information security matters at least once a year, and annual independent audits are conducted by the Company's auditors. Additional independent cyber-specific audits are undertaken on an as-needed basis, and the Company has retained a third party to provide 24x7 managed detection and response services across the Company's digital environment. A formal information security training and awareness program is compiled annually and executed in segments across the business.

Mining Industry Risks

The Company is in competition with other mining companies that have greater resources and experience.

The Company competes with other mining companies, many of which have greater resources and experience. Competition in the precious metals mining industry is primarily for mineral-rich properties which can be developed and produced economically; the technical expertise to find, develop, and produce such properties; the labour to operate the properties, and the capital for the purpose of financing development of such properties. Many competitors not only explore for and mine precious metals, but also conduct refining and marketing operations on a world-wide basis and some of these companies have much greater financial and technical resources than the Company. Such competition may result in the Company being unable to acquire desired properties, recruit or retain qualified employees or acquire the capital necessary to fund its operations and develop its properties. The Company's inability to successfully compete with other mining companies for these mineral deposits could have a material adverse effect on the Company's results of operations.

The Company may be unable to identify opportunities to grow its business or replace depleted Mineral Reserves, and it may be unsuccessful in integrating new businesses and assets that it may acquire in the future.

As part of the Company's business strategy, it has sought and will continue to seek new operating, development, and exploration opportunities in the mining industry. In pursuit of such opportunities, the Company may fail to select appropriate acquisition candidates or negotiate acceptable arrangements, including arrangements to finance acquisitions or integrate the acquired businesses into its business. The Company cannot provide assurance that it can complete any acquisition or business arrangement that it pursues or is pursuing on favourable terms, if at all, or that any acquisitions or business arrangements completed will ultimately benefit its business. Further, any acquisition the Company makes will require a significant amount of time and attention from its management, as well as resources that otherwise could be spent on the operation and development of its existing business.

Any future acquisitions would be accompanied by risks, such as a significant decline in the relevant metal price after the Company commits to complete an acquisition on certain terms, the quality of the mineral deposit acquired proving to be lower than expected, the difficulty of assimilating the operations and personnel of any acquired companies; the potential disruption of its ongoing business; the inability of management to realize anticipated synergies and maximize its financial and strategic position; the failure to maintain uniform standards, controls, procedures and policies; and the potential for unknown or unanticipated liabilities associated with acquired assets and businesses, including tax, environmental or other liabilities. There can be no assurance that any business or assets acquired in the future will prove to be profitable, that the Company will be able to integrate the acquired businesses or assets successfully or that the Company will identify all potential liabilities during the course of due diligence. Any of these factors could have a material adverse effect on its business, expansion, results of operations, and financial condition.

Mining is inherently dangerous and subject to conditions or events beyond the Company's control, which could have a material adverse effect on its business and which conditions and events may not be insurable.

Mining involves various types of risks and hazards, including, but not limited to:

- Geotechnical risks, including rock falls, pit wall failures, and cave-ins;
- Environmental hazards;
- Industrial accidents;
- Metallurgical and other processing problems;
- Unusual or unexpected rock formations;
- Seismic activity;
- Flooding;
- Fires;
- Periodic interruptions due to inclement or hazardous weather conditions;
- Variations in grade, deposit size, continuity, and other geological problems;

- Mechanical equipment performance problems;
- Unavailability of materials and equipment;
- Theft of equipment, supplies, and bullion;
- Labour force disruptions;
- Civil strife; and
- Unanticipated or significant changes in the costs of supplies.

Most of these risks are beyond the Company's control and could result in damage to, or destruction of, mineral properties, production facilities, or other properties; personal injury or death; loss of key employees; environmental damage; delays in mining; delays in production; increased production costs; monetary losses; and could impact the Company's share price and possible legal liability.

The business of exploration for minerals and mining involves a high degree of risk, as few properties that are explored are ultimately developed into producing mines.

The Company is engaged in exploration, mine development, and the mining and production of precious metals, primarily gold, and is exposed to a number of risks and uncertainties that are common to other companies in the same business. Unusual or unexpected ground movements, fires, power outages, labour disruptions, flooding, cave-ins, landslides, and the inability to obtain suitable adequate machinery, equipment, or labour are risks involved in the operation of mines and the conduct of exploration programs. The Company has relied upon, and may continue to rely upon, consultants and others for mine operating and exploration expertise. Few properties that are explored are ultimately developed into producing mines. Substantial expenditures are required to establish Mineral Reserves through drilling, to develop metallurgical processes to extract the metal from the ore, and, in the case of new properties, to develop the mining and processing facilities and infrastructure at any site chosen for mining. Although substantial benefits may be derived from the discovery of a major mineral deposit, the Company may not be able to raise sufficient funds for development. The economics of developing mineral properties is affected by many factors, including the cost of operations, variations in the grade of ore mined, fluctuations in metal markets, costs of mining and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection. Where expenditures on a property have not led to the discovery of Mineral Reserves, spent costs will not usually be recoverable.

The trading price of the Company's common shares may be subject to large fluctuations and may increase or decrease in response to a number of events and factors.

These factors may include, but are not limited to:

- The price of gold and other metals;
- The Company's operating performance and the performance of competitors and other similar companies;
- The public's reaction to the Company's press releases, other public announcements, and the Company's filings with the various securities regulatory authorities;
- Changes in earnings estimates or recommendations by research analysts who track the Company's common shares or the shares of other companies in the resource sector;
- Changes in general economic conditions;
- The arrival or departure of key personnel; and
- Acquisitions, strategic alliances, or joint ventures involving the Company or its competitors.

In addition, the market price of the Company's shares is affected by many variables not directly related to the Company's success and are therefore not within the Company's control, including other developments that affect the market for all resource sector shares, the breadth of the public market for the Company's shares, and the attractiveness of alternative investments. In addition, securities markets have recently experienced an extreme level of price and volume volatility, and the market price of securities of many companies has experienced wide fluctuations which have not necessarily been related to the operating performance, underlying asset values, or prospects of such companies. The effect of these and other factors on the market price of the common shares on the exchanges in which the Company trades has historically made the Company's share price volatile and suggests that the Company's share price will continue to be volatile in the future.

MINERAL PROPERTIES

The Company considers its Young-Davidson Mine, Island Gold Mine, and Mulatos Mine its material mineral projects for purposes of NI 43-101. The table below sets forth the technical reports, including for certain non-material properties, prepared in accordance with the disclosure standards set out in NI 43-101 by the Company.

Title	Author/Qualified Persons	Date
Feasibility Study Update Technical Report for the Lynn Lake Gold Project, Lynn Lake, Manitoba, Canada	Jennifer Abols, P.Eng.; Chris Bostwick – FAusIMM; Michele Cote – M.Sc., P.Geo.; Jeffrey Volk, M.Sc. CPG, FAusIMM; Colin Webster – P.Eng.	August 22, 2023
Technical Report for the Mulatos Property, Sahuaripa, Sonora, Mexico	Christopher Bostwick, FAusIMM, Marc Jutras P.Eng., Michele Cote, P.Geo., David Bucar, P.Eng.	March 27, 2023
Technical Report for the Island Gold Mine, Dubreuilville, Ontario, Canada	Nathan Bourgeault, P.Eng.; Raynald Vincent, P.Eng, M.G.P.; Colin Webster, P.Eng., Neil Lincoln, P.Eng.	August 29, 2022
Feasibility Study Technical Report on the Ağı Dağı Project and Preliminary Economic Assessment on the Çamyurt Project, Çanakkale Province, Türkiye	JDS Energy & Mining Inc. Andrew Cormier, P.Eng.; Marc Jutras, P.Eng.; Herb Welhener, SME-RM; Todd Minard, P.E., Paolo Chiaramello, P.Eng.; Jim Cremeens, P.E., P.G.	April 7, 2017
Feasibility Study Technical Report on the Kirazlı Project, Çanakkale Province, Türkiye	JDS Energy & Mining Inc. Andrew Cormier, P.Eng.; Marc Jutras, P.Eng.; Herb Welhener, SME-RM.; Todd Minard, P.E.; Paolo Chiaramello, P.Eng.; Jim Cremeens, P.E., P.G.	March 27, 2017
Technical Report for the Young-Davidson Mine, Matachewan, Ontario	Jeffrey Volk, CPG, FAusIMM; Christopher Bostwick, FAusIMM	January 25, 2017

Set forth below is certain mining and technical information in relation to those mines and certain of the Company's other mines and projects.

YOUNG-DAVIDSON MINE

Summary

The Young-Davidson Mine is located near the town of Matachewan, approximately 60 km west of Kirkland Lake in northern Ontario. The property consists of contiguous mineral leases and claims totaling approximately 5,915 hectares and is situated on the site of two past-producing mines that produced almost one million ounces of gold between 1934 and 1957. The Young-Davidson Mine consists of an underground mine, currently mining at a rate of approximately 8,000 tpd, a conventional flotation and carbon-in-leach ("**CIL**") mill, and associated infrastructure. The mine has been in continuous operation since 2012 and has operated from the lower mine infrastructure since the third quarter of 2020.

Property Description, Location, and Access

The Young-Davidson Mine is located in northern Ontario, Canada, centrally located between Timmins, Kirkland Lake, North Bay, and Sudbury, each of which has businesses that service the mining industry. The property is accessed by paved Highway 566, three (3) km west of the town of Matachewan.

The Company holds 100% of the mineral rights to all of the Mineral Resource related claims at the former Young-Davidson Mine and the adjoining Matachewan Consolidated Mines Limited Mine (the "**MCM Mine**"), which together comprise the modern-day Young-Davidson Mine. The Company also owns or holds the rights and/or interest to tenures consisting of patented fee simple and/or patented leasehold mineral rights and surface rights claims, a mining licence of occupation, and unpatented cell claims, covering approximately 5,915 hectares surrounding and including the Young-Davidson Mine. References to the Young-Davidson Mine or Young-Davidson are inclusive of the contiguous claim block that covers the Young-Davidson Mine. These tenures were acquired either through staking, application, option agreements, or purchase.

Young-Davidson is subject to nine separate agreements with different obligations and royalties for each agreement. Based on the currently defined Mineral Reserves and Mineral Resources, the only royalties to apply are:

(a) a 1.5% net smelter return royalty due to Triple Flag Mining Finance Ltd., applicable since July 2015; and

(b) a sliding scale royalty held by Matachewan Consolidated Mines Limited that currently applies to less than 2% of the existing underground Mineral Reserve.

The Company controls sufficient surface rights to cover the sites required for all project buildings and fixed installations for the life of mine. The Company believes it has all the necessary surface rights to dispose of waste rock and tailings on additional areas of the property. Alamos' land ownership and interest in its lands and mineral tenures are either registered or recorded with the Government of Ontario. All permits required to operate the Young-Davidson Mine are currently in place.

As Young-Davidson was the site of two former producing gold mines, there is an existing surface disturbance in the form of old workings, building foundations, and tailings sites. Although there is no clean-up order on these sites, infrastructure was designed to incorporate these sites where possible so that they are remediated as part of the mine closure plan.

Other than as described above, the Company is not aware of any rights, agreements, or encumbrances to which Young-Davidson is subject, which would adversely affect the value of the property or Alamos' ownership.

The daily average mean temperature in nearby Kirkland Lake, Ontario is 1.7°C. The extreme maximum recorded temperature is 38.9°C, and the extreme minimum temperature is -47°C. The average annual precipitation is 884 mm, comprising 590 mm of rainfall and 294 mm as snowfall. Given this climate, exploration and mining development activities can be carried out year-round.

The surface rights possessed by the Company, and the availability of sources of power, water, mining personnel, potential tailings storage areas, and potential waste disposal are sufficient for planned mining operations. Electricity is provided from the provincial grid through a transmission line that was upgraded prior to commercial production.

The property is typical of northern Ontario with forest-covered low rolling hills, small lakes, and wetlands with numerous gravel roads providing access to all areas of the property. The average elevation on the property is 330 m above sea level.

History

The initial discovery of gold in the project area was made by prospector Jake Davidson in 1916 on what became the former Young-Davidson Mine. This sparked a staking rush that resulted in a second discovery by Samuel Otisse on what became the MCM Mine property. Surface prospecting, trenching, and outcrop stripping continued intermittently for the next seventeen years on both properties. During this time a joint venture was established between Hollinger Corporation and Young-Davidson Mines Limited, and underground mine production was initiated in 1934 and continued until 1957, over which time a total of 5.6 million tonnes were mined producing 585,690 ounces of gold (3.22 g/t recovered grade). Production from the MCM Mine property over the period 1934-1954 totaled 3.2 million tonnes, and 378,101 ounces of gold (3.67 g/t recovered grade). Following the closure of the mines, the properties remained dormant until 1980, at which time Pamour Mines concluded option/joint venture agreements on both properties with the aim of establishing an open pit operation. Approximately 96,000 tonnes of ore were mined and trucked to the Pamour mill facility east of Timmins.

In 1995, Royal Oak Mines Inc. (" **Royal Oak**"), a successor company to Pamour Mines, initiated extensive diamond drilling to define an open pit Mineral Resource, initiated shaft dewatering with a view to underground exploration, conducted shaft rehabilitation as well as engineering studies and environmental assessment studies with a view to re-opening the mines. Following the bankruptcy of Royal Oak, the property was dormant for several years before being acquired by a private company in 2000. This private company undertook limited exploration and, in 2002, vended the asset into Young-Davidson

Mines Limited, the same company that had discovered the property. Young-Davidson Mines Limited re-initiated exploration with 9,312 m of drilling in 58 diamond drill holes.

In late 2005, Northgate Minerals Corporation (“**Northgate**”) amalgamated with Young-Davidson Mines Limited through a plan of arrangement and proceeded with surface exploration, environmental and engineering studies, and underground exploration and development.

In 2011, AuRico acquired Northgate, which included Young-Davidson.

In 2015, AuRico and Former Alamos combined to form Alamos.

In 2021, Alamos acquired a private company, Victoria Gold Mines (East Timmins) Limited, along with its Golden Arrow Project in Hislop Township.

Geological Setting, Mineralization, and Deposit Types

Young-Davidson is situated within the southwestern part of the Abitibi Greenstone Belt. The Abitibi Greenstone Belt consists of a complex and diverse array of volcanic, sedimentary, and plutonic rocks typically metamorphosed to greenschist facies grade, but locally attaining amphibolite facies grade. Volcanic rocks range in composition from rhyolitic to komatiitic and commonly occur as mafic to felsic volcanic cycles. Sedimentary rocks consist of both chemical and clastic varieties and occur as both intravolcanic sequences and as unconformably overlying sequences. A wide spectrum of mafic to felsic, pre-tectonic, syn-tectonic, and post-tectonic intrusive rocks are present. All lithologies are cut by late, generally northeast-trending Proterozoic diabase dikes.

The Abitibi Greenstone Belt rocks have undergone a complex sequence of deformation events ranging from early folding and faulting through later upright folding, faulting, and ductile shearing, resulting in the development of large, dominantly east-west trending, crustal-scale structures that form a lozenge-like pattern. The regional Larder Lake-Cadillac Fault Zone (“**LLCFZ**”) cuts across the Young-Davidson Project area. The LLCFZ has a sub-vertical dip and generally strikes east-west. The LLCFZ is characterized by chlorite-talc-carbonate schist, and the deformation zone can be followed for over 200 km from west of Kirkland Lake to Val d’Or, Québec.

There are three important groups of Archean sedimentary rocks in the district. The oldest is Pontiac Group quartz greywacke and argillite, which occur as thick assemblages in Québec, while interbedded within the Larder Lake Group volcanic rocks are turbiditic siltstones and greywackes of the Porcupine Group. Unconformably overlying is Timiskaming Group Conglomerate, turbidite, and iron formation with minor interbedded alkalic volcaniclastic units.

Archean intrusive rocks are numerous in the district but are largely manifested as small stocks, dikes, and plugs of augite syenite, syenite, and feldspar porphyry occurring in close temporal and spatial association with the distribution of Timiskaming Group sediments. The main syenite mass, which hosts most of the gold mineralization on Young-Davidson, measures almost 900 m east-west by 300 m north-south.

Huronian Proterozoic sedimentary rocks onlap and define the southern limit of the Abitibi in Ontario. In the project area, these rocks are correlative to the Gowganda Formation tillite. Post-Archean dike rocks include Matachewan diabase and younger Nipissing diabase, which respectively bracket the Huronian unconformity in the project area.

Essentially, all of the historical production at the former Young-Davidson Mine and approximately 60% of the production from the MCM Mine was from syenite-hosted gold mineralization. Most of the current underground Mineral Resources are also related to syenite-hosted gold. The syenite-hosted gold mineralization consists of a stockwork of quartz veinlets and narrow quartz veins, rarely greater than a few inches in thickness, situated within a broader halo of disseminated pyrite and potassic alteration. Visible gold is common in the narrower, glassy-textured quartz veinlets. In general, gold grades increase with quartz veinlet abundance, pyrite abundance, and alteration intensity. Mineralized areas are visually distinctive and are characterized by brick red to pink K-feldspar-rich syenite containing two to three percent disseminated pyrite and several orientations of quartz extension veinlets and veins. The quartz veins and veinlets commonly contain accessory carbonate, pyrite, and feldspar.

Exploration

In 2021, a total of 12,998 m of underground exploration drilling and 4,086 m of surface exploration drilling was completed at Young-Davidson. The 2021 underground exploration drilling was completed from drill platforms that had been established both in the mid and lower-mine infrastructure. The objective of the drill program was to explore the down-dip extension of the

Young-Davidson ore body to the west, below current Mineral Resources, and to test the extensions of syenite-hosted mineralization in the eastern portion of the deposit. The 2021 mine exploration program was the first significant exploration program at Young-Davidson since 2011, with the focus over the past several years on the completion of the lower mine expansion. The surface exploration program tested several near-surface targets in the north-central portions of the 5,720 hectare Young-Davidson property. In addition, a high-resolution drone magnetic survey and a fixed-wing LIDAR survey were completed across the property in 2021, the results of which will be used to support exploration targeting.

Following up on the 2021 drilling program, a total of 11,786 m of underground exploration drilling, and 9,831 m of surface exploration drilling was completed at Young-Davidson in 2022. The 2022 underground exploration drilling was completed from drill platforms located in the mid and lower-mine infrastructure on the 8,960 m and 9,220 m levels. The objective of the drill program was to continue to test the down-dip extension of the Young-Davidson ore body to the west, below current Mineral Resources. The 2022 surface exploration program tested several targets across the 5,915 hectare Young-Davidson property.

In 2023, 23,205 m of underground exploration drilling was completed in 56 holes, and 38,110 m of definition drilling was completed in 271 drill holes from the mid- and lower-mine infrastructure at Young-Davidson. A total of 7,052 m of surface exploration drilling was completed in 21 holes. In addition, 14 diamond drill holes totaling 2,677 m of drilling was completed at the Golden Arrow Project in 2023.

Both the mine exploration and surface exploration drilling programs are ongoing in 2024, with a total budget of $12 million, including regional exploration, which is expensed. The program includes 21,600 m of underground exploration drilling, 7,000 m of surface exploration drilling, and 1,070 m of underground exploration development to extend drill platforms. The focus of the underground exploration drilling program will be to expand Mineral Reserves and Mineral Resources that have been identified within proximity to existing underground infrastructure. The surface drilling program is planned to test targets across the 5,915 hectare Young-Davidson property, including the historic MCM Mine area to the east of Young-Davidson. Additionally, $2 million is budgeted at Golden Arrow with 5,000 m of drilling planned. The focus of the drilling will be the conversion of existing Mineral Resources into Reserves, and testing near-deposit and early stage exploration targets across the property. Geotechnical and condemnation drilling will also be conducted as part of a development plan for the project. The Golden Arrow deposit is located 95 km from the Young-Davidson mill and is being evaluated as a source of supplemental mill feed.

Drilling

Since the discovery of gold in the project area until October 14, 2008, a total of 293,774 m of surface and underground diamond drill holes have been completed. Except for the holes pre-dating 1980 (324 holes, 20,236 m), all of the drill logs have been preserved. All holes have been plotted on historic records and these hole traces and assays have now been entered into the database. All holes since 1988 have been surveyed for their collar co-ordinates, and it is assumed that all pre-1988 underground hole collars were surveyed as per industry practice at the time of production. Since 1980, all holes have been downhole surveyed using a tropari instrument or acid test and since 2006 all drill holes have been surveyed using FLEXIT and/or a gyroscopic instrument in order to measure downhole deviation.

Underground drill holes were AQ core (27 mm diameter) as was the practice of the day, surface holes pre-dating Northgate were, with one exception, BQ core (36.5 mm diameter), and all holes by AuRico and Alamos (and the one exception) have been NQ core (47.6 mm diameter) except where a reduction to BQ (36.5 mm diameter) has been required to complete the hole in problematic ground conditions. Core recovery and rock quality designations have not been noted in historic drill logs; however, in all the holes by Northgate, AuRico, and Alamos core recovery has been excellent, and the rock quality designation factor has been very high indicating very competent rock.

From 2009 to 2015, a total of 246 surface exploration drill holes were completed for a total of 126,272 m. No surface exploration was undertaken from 2016 to 2020.

From 2009 to 2021, a total of 493,860 m of underground drilling was completed, including 145,813 m of exploration drilling in 283 holes, and 384,626 m of definition drilling in 3,034 holes.

In 2021, 12,998 m of underground exploration drilling was completed in 27 holes from drill platforms that had been established both in the mid and lower-mine infrastructure. A total of 4,086 m of surface exploration drilling was completed in 9 holes.

At the Golden Arrow Project, 30 drill holes totaling 4,089 m were completed in 2021. The drilling was completed to infill historic drill holes in preparation for an updated Mineral Resource Estimate in 2022.

The 2022 drilling program consisted of 11,786 m of underground exploration drilling in 18 holes from the mid and lower-mine infrastructure, and 31,053 m of definition drilling in 182 drill holes. A total of 9,831 m of surface exploration drilling was completed in 21 holes. No drilling was completed at the Golden Arrow Project in 2022.

In 2023, 23,205 m of underground exploration drilling was completed in 56 holes, and 38,110 m of definition drilling was completed in 271 drill holes from the mid- and lower-mine infrastructure at Young-Davidson. A total of 7,052 m of surface exploration drilling was completed in 21 holes. In addition, 14 diamond drill holes totaling 2,677 m of drilling was completed at the Golden Arrow Project.

Sampling, Analysis, and Data Verification

Drill core is transported directly from the drill rigs to the secure core logging facility. Core is logged with geological information being recorded, including rock type, degree of alteration, the estimated percentage of sulfide minerals, and vein intensity. Zones of interest are marked out and assigned a sample number, and assay tags are inserted into the box as well as being inserted into the sample database. Most of the core is cut with a diamond-bladed core saw. The majority of the samples are 1.0 m in core length and most of the historic samples are in five-foot lengths. Assay procedures were not well documented prior to 2003, but it is assumed that conventional crushing, pulverizing, and classical fire assay techniques were used.

Certified reference material ("**CRM**") and blanks were inserted with samples prior to analysis. A number of measures have been implemented, which were designed to maintain a high level of security at the core logging facility, at the mine property, and while the samples are in transit.

Drill core samples from the exploration program are shipped to ALS in Timmins, Ontario, for preparation and assaying. Each core sample is entirely crushed to better than 70% passing -2 mm (minus 10 mesh). A 250 gram split of crushed material is taken and pulverized to 85% passing 75 microns (200 mesh) and 50 grams is analyzed by Fire Assay (FA) with an Atomic Absorption Spectrometry (AAS) finish. All samples >8 g/t Au are re-analyzed with a gravimetric finish. All sample batches were subjected to the laboratory's internal quality control procedures.

All mine samples, including muck, underground channel, and underground infill drill core are assayed at the on-site laboratory operated by the Company. Samples are prepared and analyzed as described above. The mine laboratory is externally audited on a periodic basis. A check assay program and participation in an international round robin were initiated in 2014. Both the laboratory and the operation's quality control ("**QC**") results have been reviewed regularly by Analytical Solutions Ltd.

No information has been compiled that describes the QC and quality assurance (" **QA**") procedures for the pre-2003 drilling; however, it is unlikely that blanks and CRMs were used as this did not become standard industry practice until the early 2000s. The main form of QA/QC would have been periodic re-assaying of anomalous samples with the introduction of blanks in the early 1980s and 1990s.

The QA/QC for the 2006 to 2016 programs is documented in the technical documents filed on SEDAR+ at www.sedarplus.ca. In essence, this data amounted to four percent of the entire population of samples submitted for analysis, including blanks, CRMs, and duplicates. Additionally, about 15-20% of pulp replicates and 2.5% of reject duplicates were analyzed and incorporated into the final assay grade to improve overall precision. The QA/QC data is monitored as the samples are being processed at the laboratories. Where analytical problems are identified, the laboratory is required to reanalyze the samples.

The project database has been subject to verification or audit by Micon International Inc. (2004), Scott Wilson Roscoe Postle Associates Inc. (2006), AMEC plc (2008), and Company geologists (2006, 2007, and 2008) who had no direct involvement with the project. Collar coordinates, downhole survey tests, and assay intervals were verified against a variety of supporting documentation. Where errors have been identified these were corrected and procedures put in place to prevent re-occurrence and to expedite future data verification programs. In each case, the third-party audit has concluded that the database is valid and acceptable for supporting Mineral Resource estimation work on the project.

Mineral Processing and Metallurgical Testing

The metallurgical test work programs considered for the feasibility study were completed in 2008 and early 2009 at SGS Lakefield. The results of these tests provided the data used for the design criteria.

The tests were conducted on samples from 32 holes selected across the mineralization from which five zone composites and a master composite were prepared. Flowsheet optimization was conducted on the master composite. Once the metallurgical parameters were optimized, the five-zone composite and 32 individual samples were used for variability testing.

The grinding characteristics of the design mineralized material, an equal mixture of Upper Boundary Zone, Lower Boundary Zone and Pit Zone, material as combined material for pilot plant feed gives an average Bond Work Index of 15.6 kilowatt hours per tonne ("**kWh/t**") at 100 mesh (106 micrometer ("**µm**")) of grind. The selected six zone samples work index ranged from 14.7 to 18.3 kWh/t. Most samples tested fell in the medium to hard range of hardness with respect to impact breakage and Bond rod mill/ball mill grindability work indices while there was one waste sample that fell in the very hard range of hardness. All samples have been classified as abrasive or very abrasive.

The gravity recoverable gold was determined to be about 25% of the gold contained in the composite sample tested when cleaning of the primary centrifugal concentrator product on a Mozley table was completed to a target 0.05% weight recovery of the initial feed material.

Mineral Resource and Mineral Reserve Estimation

Mineral Resource and Mineral Reserve estimates can be found in the section following "Other Mineral Properties" titled "December 31, 2023 Mineral Reserves and Resources".

Mining Operations

Open pit mining commenced in November 2011, and ceased in June 2014, upon depletion of the in-situ open pit Mineral Reserve. While the mining of the open pit has ceased, a sizeable stockpile of open pit ore was used to augment underground production until early 2020 but has now been depleted. Over the life of the open pit, approximately 20.9 million tonnes ("**Mt**") of waste rock was generated by the open pit and placed in the waste dump to the north of the pit. Commercial production was declared for the Young-Davidson open pit mine and mill, effective September 1, 2012.

In October 2013, the Company commissioned the mid-shaft loading pocket and shaft hoisting infrastructure and began hoisting underground ore to surface via the Northgate shaft. Prior to October 2013, ore was being trucked to surface through the exploration ramp. On October 31, 2013, commercial production at the Young-Davidson underground mine was achieved.

The underground deposit is located approximately 210 m to 1,500 m below surface. During 2013, AuRico completed the sinking of the Northgate shaft down to the mid-shaft loading pocket to access the first eight years of mine production. The Company has since completed vertical access in the underground mine below that of the mid-shaft loading pocket, to the ultimate depth of 1,500 m. In 2017, raise boring of the Northgate shaft was completed to the ultimate depth of 1,500 m and ground supporting of the shaft was completed in 2018. Completion of the lower mine development and the tying in of the Northgate shaft extension was completed in mid-2020. In 2015, the existing MCM #3 shaft was extended to a depth of 1,500 m to provide for the hoisting of personnel, materials, and ore and waste. Commissioning of the MCM #3 shaft was completed in the first half of 2016. The mine is also accessed by a ramp, which was extended to the bottom of the mine from the existing exploration ramp and was completed in the first half of 2020. The mine design has taken into consideration the existing MCM #3, the Northgate shafts and other existing openings for ventilation. Additional ventilation raises to surface have been established and the underground ventilation circuit continues to be upgraded as the mine deepens.

The underground mine has been designed for low operating costs using large modern equipment, gravity movement of ore and waste through passes, shaft hoisting, minimal ore, and waste re-handling, high productivity bulk mining methods, and paste backfill. The mining method employed is a combination of transverse and longitudinal stoping, followed by paste backfill, on 30 m sub-levels. Below the 9,400 m level, sub-levels are being developed on 35 m intervals. Given the significant orebody widths, it is expected that approximately 90% of the remaining Mineral Reserves will be transversely mined. The mine operates scoop trams to load, haul and transfer stope production to the ore pass system from where it is hoisted to the surface via two 24.5 tonne skips in the Northgate shaft.

With the commissioning of the lower mine infrastructure in the third quarter of 2020, the Northgate shaft hoisting capacity is approximately 10,500 tpd of ore and waste.

At the current design production rates of 2.92 million tonnes per year (8,000 tpd) at full production (post-2021), the underground will have a minimum mine life of approximately 15 years based on the current Mineral Reserve.

Lateral development of the underground mine will average approximately 11,000 m per year, including capital, operating, and ore categories for the next ten years of the underground mine operation. In the last five years of the underground mine life, the development requirements drop off sharply as the mine is close to being fully developed.

The average underground hourly mining personnel requirements at 8,000 tpd are estimated to be approximately 380 persons. The mine operates seven days a week with two 10.5 hour shifts per day, working five days on and four days off followed by four days on and five days off schedule. The mine is fully owner-operated, with only diamond drilling and raising being contracted.

Processing and Recovery Operations

The metallurgical test programs supported the selection of single stage semi-autogenous grinding circuit followed by flotation. The flotation concentrate is further ground and leached in a conventional carbon-in-leach circuit. The flotation tailings are also leached in a carbon-in-leach circuit. The gold is recovered from the carbon, followed by electro-winning and pouring doré bars.

The combined leach tailings were used for the cyanide destruction test work. The Young-Davidson carbon-in-leach tailings are treated with the SO2/Air cyanide destruction method.

In January 2014, a paste backfill plant was commissioned and is capable of supplying paste fill to the underground voids at a rate in excess of 8,000 tpd.

A pebble crusher was added to the mill circuit in the fourth quarter of 2017.

Gold recovery of the CIL circuit at the Young-Davidson mill is approximately 91%.

Infrastructure, Permitting, and Compliance Activities

Existing infrastructure at the Young-Davidson Mine includes the Northgate and MCM shafts and headframes, the access ramp portal, surface ventilation equipment, an 8,000 tpd conventional CIL mill, an 8,000 tpd paste backfill plant, two tailings dams, various office and workshop buildings, and two power lines connected to the provincial grid. Paved highway access exists to the mine site.

In 2021, the Young-Davidson Mine completed the construction of a new tailings impoundment facility, TIA1. Preparatory works, including clearing, grouting, and diversion channel construction were undertaken in 2019. In 2020, embankment construction began and was completed at the end of 2021. TIA1 was constructed using the modified centerline method. This new facility, with additional future lifts, is expected to be able to contain all of the current Young-Davidson Mineral Reserves and Resources.

The Young-Davidson Mine received a filing of its Closure Plan Amendment in November 2021 an d submitted a further Amendment in December 2022. It requires no additional permits for continued operation and the mine is in compliance with all regulatory requirements. The Company has recorded an asset retirement obligation liability of $16.7 million, which it expects to settle during mining and on closure.

The Company entered into Impact Benefit Agreements with the Matachewan First Nation on July 2, 2009, and with the Temagami First Nation / Teme Augama Anishnabai on July 14, 2012, as the Young-Davidson Mine is situated within the traditional territory of these two First Nations. The Company entered into an Amended Impact Benefit Agreement with the Matachewan First Nation on December 18, 2017. In addition, through its acquisition of the private company Victoria Gold Mines (East Timmins) Limited in 2021, which owns the Golden Arrow project, the Company inherited an Impact and Benefit Agreement with Wahgoshig First Nation dated December 18, 2014.

Capital and Operating Costs

Actual results for 2022 and 2023 and guidance for 2024 production, operating costs, and capital are depicted below.

		2022 Actual	2023 Actual	2024 Guidance
Gold Production	(ounces)	192,200	185,100	180,000 - 195,000
Total Cash Costs[(1)]	($/ounce)	878	938	950 - $1,000
Mine Site All-in Sustaining Costs[(1)]	($/ounce)	1,133	1,208	1,175 - $1,225
Capital	($ millions)	66.5	62.1	60 - 70
Capitalized Exploration	($ millions)	5.0	5.1	10
Mine Site Free Cash Flow[(1)]	($ millions)	101.3	117.6	N/A

[1] Refer to Non-GAAP Measures and Additional GAAP Measures on page 7. Detailed reconciliations of the non-GAAP measures to measures under IFRS for the years ended December 31, 2023, and 2022 can be found in the Company's MD&A for the year ended December 31, 2023, as available on www.sedarplus.ca.

2024 Outlook

Gold production at Young-Davidson in 2024 is expected to remain consistent with 2023, reflecting similar grades and mining and processing rates.

Grades mined and processed are expected to range between 2.15 and 2.30 g/t Au in 2024 and remain at similar levels through 2026.

Total cash costs are expected to increase approximately 5% from 2023, primarily reflecting ongoing cost inflation, with the largest driver being labour inflation in Northern Ontario. Mine-site AISC are expected to be consistent with 2023, with the increase in total cash costs offset by lower sustaining capital. Mine-site AISC are expected to increase in 2025 and 2026, reflecting slightly higher sustaining capital.

Capital spending in 2024 (excluding exploration) is expected to range between $60 and $70 million. This is up from 2023, reflecting inflation and higher growth capital, partly offset by lower sustaining capital. Capital spending is expected to remain at similar levels in 2025 and 2026.

Young-Davidson generated a record mine-site free cash flow of $117.6 million in 2023, and has generated more than $100 million of free cash flow for the third consecutive year. At current gold prices, the operation is well positioned to generate similar free cash flow in 2024 and over the long term, given its 15-year Mineral Reserve life.

ISLAND GOLD MINE

Summary

The Island Gold Mine is located approximately 83 km northeast of Wawa, in northern Ontario. Island Gold consists of an underground mine, currently mining at a rate of approximately 1,200 tpd, a conventional carbon-in-pulp ("**CIP**") mill, and associated infrastructure. The Company acquired Island Gold through its 2017 acquisition of Richmont Mines Ltd. The mine has been in continuous operation since 2007.

Property Description, Location, and Access

The Island Gold Mine is located within the Sault Ste. Marie Mining Division, and is approximately 83 km northeast of Wawa, Ontario. Dubreuilville, Ontario, is approximately 10 km northwest of the Island Gold Mine. Access to the Island Gold Mine is via an all-weather road from Highway 519, situated just west of the town of Dubreuilville, approximately 35 km east of the junction between Highways 17 and 519.

The Company owns or holds 100% of the mineral rights to all the Mineral Resource and Mineral Reserve related claims at the Island Gold Mine. The Company holds 100% of the title and/or interest to the Island Gold Mine and its surrounding project lands (collectively, the "**Island Gold Property**"). The Island Gold Property is divided into eleven property areas, namely: Argonaut, Edwards, Ego, Goudreau, Goudreau Lake, Island Gold, Kremzar, Lochalsh, Salo, Trillium, and Manitou, consisting of patented fee simple and/or patented leasehold mining rights and surface rights claims, mining licences of occupation and unpatented cell claims covering approximately 55,277 hectares, with the exception of:

(i) Part of one mining lease, for which it holds 100% below 100 m, on the Lochalsh property;
(ii) Six patented fee simple claims, for which it owns 100% below 400 m, and part of one patented fee simple claim for which it owns 100% below 100 m, both situated on the Goudreau property;
(iii) Four patented fee simple claims, for which it owns 100% below 400 m, situated within the Kremzar property; and
(iv) Three patented fee simple claims, for which it owns 100% below 400 m, on the Argonaut property.

Collectively, Island Gold is subject to different obligations and royalties. Based on the currently defined Mineral Reserves and Mineral Resources, the only royalties to apply are:

(i) The Lochalsh property is subject to a 3% NSR payable to Osisko Gold Royalties Ltd. (" **Osisko**"). The Island Main and Lochalsh zones, as well as a part of the Island Gold Mineral Resources below the 400 m level, are located on this property;
(ii) The Goudreau Lake property is subject to a 2% NSR royalty payable to Osisko as to a 69% interest and to Franco-Nevada Corporation as to a 31% interest; and
(iii) The Goudreau property is subject to a 2% NSR payable to Osisko.

In the fourth quarter of 2021, the Company acquired and canceled a net profit interest (" **NPI**") royalty payable on production from certain claims at the Island Gold Mine for consideration of $15.7 million. Over the past two years, the Company has acquired both an NPI and an NSR royalty on Island Gold that have significantly enhanced the long-term value of the operation.

The Company controls sufficient surface rights to cover the sites required for all project buildings and fixed installations for the life of mine. The Company believes it has all the necessary surface rights to dispose of waste rock and tailings on additional areas of the Island Gold Property. The Company's land ownership and interest in its lands and mineral tenures are either registered or recorded with the Government of Ontario. All permits required to operate the Island Gold Mine are currently in place.

The surface rights possessed by the Company, along with the availability of sources of power, water, mining personnel, potential tailings storage areas, and potential waste disposal areas, are all expected to be sufficient for planned mining operations. Electricity is provided by a private company through a transmission line connected to the provincial grid.

The Island Gold Property is located within the Lake Superior Regional climatic zone, moderated by the influence of Lake Superior. The average daytime temperature is 2°C, ranging from -41°C to 31°C throughout the year. Annual precipitation is normally 669 mm of rain and 278 mm as snow. Winter winds are from the northwest and north, and during the summer south-westerly to westerly winds prevail. Given this climate, exploration, and mining development activities can be carried out anytime throughout the year.

The Island Gold Property is within the Precambrian Shield adjacent to Lake Superior, in an area of low rolling hills that trend in an east-west direction with widespread swamps, and mixed forests of broadleafs and conifers. The property relief is low, from a high point of 488 m above sea level near the Miller and Maskinonge Lakes to a topographic low point of 381 m above sea level near Goudreau Creek. The Island Gold Mine area has been partially logged.

History

The Goudreau - Lochalsh Gold Camp area has been the subject of interest dating back to the early 1900s and has attracted prospectors and mining companies in search of iron ore, gold, and base metal deposits. The Wawa - Michipicoten area has been recognized for its long history of iron exploration, which has resulted in the development and production of several iron ore mining operations.

Gold exploration followed shortly thereafter, resulting in several gold discoveries which were subsequently developed and brought into commercial production in the area, which would later become the Island Gold Property. A detailed summary of the work history is available on SEDAR+ in the NI 43-101 Technical Report for the Island Gold Mine, issued August 29, 2022.

In 1983, Canamax Resources Inc. ("**Canamax**") and a private company formed a joint venture to evaluate the mineral potential of the private company's 117 patented claims covering the Goudreau iron range. In 1985, drilling by Canamax, about two km south of the Kremzar deposit, intersected a series of sub-parallel lenses containing gold mineralization within deformed rocks of the Goudreau Lake Deformation Zone ("**GLDZ**").

Canamax developed and operated the Kremzar mine and mill. From 1988 to 1990, production from the Kremzar mine was 306,000 tonnes, grading 4.80 g/t Au. At the end of 1990, Canamax suspended all operations at both the Kremzar and Island Gold Projects. During this period, a total of 96,143 m of core drilling was completed on various parts of the Canamax Property.

In 1989 and 1990, underground access was established into the Island Gold deposit with an adit from the north shore of Goudreau Lake. A 4,167 tonne bulk sample was extracted and processed at the Kremzar Mill.

At the end of 1990, Canamax suspended all operations at both the Kremzar and Island Gold Projects.

Patricia Mining Corp. ("**Patricia**") acquired the project in 1996 and undertook diamond drilling and underground exploration between 1996 and 2004. Richmont acquired 100% ownership of the Island Gold Property through a combination of an earn-in

arrangement with Patricia between 2003 and 2005, the purchase of a private company's interest in 2006, the acquisition of Patricia in 2008, and the acquisition of the remaining 31% on four patented mining claims in 2014.

In October 2007, Island Gold began commercial production, with ore being processed in the existing Kremzar mill.

On May 9, 2012, Richmont acquired Red Pine Exploration's remaining 25% interest in the Edwards property, bringing Richmont's ownership to 100%, and on June 13, 2012, Richmont acquired the Salo property, which includes three claims located to the east of the Island Gold Mine.

In 2017, Richmont closed an agreement with Argonaut Gold Inc. (" **Argonaut**"), whereby Richmont acquired three claims in their entirety, and the mining rights below 400 m on three additional Argonaut claims, on the adjacent Magino property. Argonaut received one claim in its entirety and surface and mining rights down to a depth of 400 m on six claims. Argonaut also received surface rights on two claims down to a depth of 100 m. As part of the transaction, Richmont received CAD$2.0 million in cash from Argonaut on closing.

In November 2017, Alamos acquired Richmont and the Island Gold Mine, and on August 1, 2018, Richmont and Alamos amalgamated to become Alamos.

Since the acquisition of Richmont, Alamos has spent CAD$125.9 million on exploration. Mineral Reserves have increased by 1.9 million ounces before mining depletion (1.0 million ounces net of mining depletion). Measured and Indicated Mineral Resources have increased 583%, or 625,000 ounces, with grades increasing 47%. Inferred Mineral Resources have increased 170%, or 2.7 million ounces, with grades increasing 43%.

On December 17, 2020, Alamos announced the acquisition of Trillium Mining Corp. (" **Trillium**") for cash consideration of CAD$25M. The acquisition of Trillium's tenures, consisting of owned and optioned patented fee simple and/or patented leasehold mining rights and surface rights claims, and held unpatented cell claims, covers approximately 5,738 hectares, and significantly expanded Alamos' land tenure interest around the Island Gold Mine to a total of approximately 15,524 hectares. The expanded land tenure provides significant exploration potential in proximity to the high-grade Mineral Resources and Reserves of the Island Gold deposit, and regionally.

On March 24, 2023, Alamos announced that it had acquired all of the issued and outstanding shares of Manitou Gold Inc. (" **Manitou**") by way of a court-approved plan of arrangement. This acquisition increased Alamos' regional land package around Island Gold with the addition of the Manitou Goudreau Property. This included 40,000 hectares adjacent to and along strike from the Island Gold Mine, adding significant exploration potential across the relatively under explored Michipicoten Greenstone Belt ("**MGB**"). This increased Alamos' land package around the Island Gold deposit to 55,277 ha, a 267% increase.
Alamos has developed a systematic district-scale targeting and exploration approach for the area surrounding the Island Gold Mine. This approach can now be applied to the larger consolidated land package to rapidly generate and test new exploration targets.

Geological Setting, Mineralization, and Deposit Types

The Island Gold Property is located in the MGB, which is part of the Wawa Subprovince within the Archaean Superior Province. The MGB is approximately 140 km long and up to 45 km wide. The metamorphic grade of the subprovince is greenschist but amphibolite facies can be seen locally or proximal to intrusions. A major regional deformation zone called the Goudreau Lake Deformation Zone ("**GLDZ**") is situated throughout the area. It is a north-easterly trending structure that has been traced along strike for 30 km with a width of 4.5 km and is believed to be the main control of gold mineralization for the Project area. It is a high-angle oblique-slip fault zone with an overall dextral movement cutting stratigraphy at a shallow angle. There are three main splays to the GLDZ in the area, the southernmost of which hosts the Island Gold Mine structure, which contains a stacked sequence of east-northeast striking, steeply dipping, and subparallel zones of gold mineralization.

Lithologies appear to form a conformable homoclinal volcano-stratigraphic sequence, facing and younging to the north in the project area. Tight to isoclinal folds and local attenuation or boudinage of units along fold limbs appear to occur regionally. Fold axes are subparallel to the regional foliation at N070°E to N095°E.

The Island Gold Mine is stratigraphically positioned in the upper portion of the Wawa Assemblage on the northern limb of the Goudreau Anticline. This assemblage is mostly composed of felsic volcanic rocks of various facies of tuffs and lavas.

Quartz veins commonly bear visible gold in the form of aggregates, disseminated fine grains, or along chlorite-sericite slickensides within the veins. The degree of veining appears to change at depth, transitioning from a stringer style quartz-carbonate vein on scales between mm to larger-scale veins which can be over 4 m in width.

The Island Gold deposit is composed of multiple, stacked, south-dipping lenses. The mineralized corridor expands from 50 m wide in the upper levels to over 150 m wide at depth. The zone's dip varies from sub-vertical to vertical from -50° to -90° south. Locally, north dip reversals occur but are not common. Rare instances of offset or folding have been seen. Around the 400 m levels, there is a shallow dipping southern inflection of the mineralized zones. It is not yet clear if this inflection is related to a fault, a shear zone, or a fold. This inflection point is the division of what is locally referred to as the Upper Island Gold Mine and the Lower Island Gold Mine.

The Island Gold Mine is an Archean orogenic lode gold deposit. It is a structurally hosted quartz-carbonate vein system situated within the GLDZ, a major regional brittle-ductile structure. The host terrane is a sequence of felsic to intermediate volcanic rocks of the Wawa Assemblage, which are in the greenschist metamorphic range as is common for this type of deposit. High strain zones associated with the GLDZ have the tendency to develop at variable scales along lithologic unit contacts where complex geology and related competency contrasts can control stress patterns and facilitate shearing and the consequent development of dilatancy zones and concomitant quartz-carbonate vein formation. It is generally accepted that these Archean orogenic lode gold deposits are related to compressional and transpressional tectonics and the associated metamorphic dewatering and devolatilization of magma processes from which the gold-bearing fluids are derived.

Exploration

Patricia acquired the project in 1996 and completed 16,862 m of diamond drilling in 49 holes on the Island Gold deposit and Lochalsh Zone between 1996 and 2002. In 2004, Patricia, after driving a 1,280 m ramp, started an underground exploration program with a total of 125 m of exploration drifts, 53 m of ore sill, and 8,137 m of drilling being completed.

In 2005, Richmont completed 2,111 m of underground development and 7,903 m of delineation drilling. A total of 7,259 tonnes with a content of 6.23 g/t Au from ore development were stockpiled on the surface.

In 2006, Richmont continued the exploration program. A total of 28,149 m of underground diamond drilling was performed on the Island Zone, and 10,602 m of drilling was completed from the surface on the Lochalsh and Goudreau Zones.

Between 2010 and 2012, drilling below the 400 m level was done from surface and from underground, and demonstrated the mine's Mineral Resource potential at depth (Island Gold Deep program). More specifically, the drilling resulted in a first Mineral Resource estimation for the C Zone at depth in January 2013.

Since 2013, exploration drilling has continued, from underground and from surface, with results shown in the continuous annual increase of the Mineral Reserve and Resource base.

In 2018 and 2019, the Company also expanded its focus on regional exploration over its the n 9,511 hectare land position. This work included the establishment of a comprehensive exploration database, relogging of drill core on a section-by-section basis, and a property scale 2,170 line km (100 m line spacing) high-resolution airborne gravity gradiometric and magnetic survey (AGG HeliFALCON®).

In 2020, a geological model was completed for the Island Gold deposit, identifying primary controls on gold mineralization that will be used to continue to guide further exploration on the Island Gold Property.

A pipeline of regional exploration targets has been established which were the focus of regional exploration activities in 2021, including a high-resolution drone (UAV) magnetic survey, a fixed-wing LIDAR survey, gold grain-in-till, and geochemical sampling, and geological mapping over large portions of the expanded 15,524 hectare property.

In 2022, regional exploration focused on advancing early-stage targets throughout the property, including 9,707 m of diamond drilling, a 91 hole basal till/top of bedrock RC drill program, outcrop stripping and channel sampling, and targeted geological mapping and prospecting.

Island Gold's significant pace of growth continued in 2023, with Mineral Reserves and Resources increasing 16% across all categories to 6.1 million ounces, net of depletion. Combined Mineral Reserves and Resources have now increased for eight consecutive years with grades also increasing substantially over that time frame. Including mining depletion to date, 7.5 million

ounces have been discovered at Island Gold as it continues to establish itself as one of the highest-grade and fastest-growing deposits in the world.

In 2023, Mineral Reserves and Resources increased across all categories, driven by the expanded underground exploration drill program targeting high-grade additions in proximity to existing underground infrastructure. This included zones within the main Island Gold structure (C and E1E Zone), which hosts the majority of Mineral Reserves and Resources, as well as emerging opportunities outside of the main structure in the hanging wall and footwall.

Underground drilling was completed from existing drill bays, providing improved access and allowing for more optimal drilling orientations to define and expand the growing number of sub-parallel and high-angle mineralized zones within the hanging wall and footwall. Initial Mineral Reserves and Resources have been declared and/or increased across a number of these recently defined and expanding zones which have become significant contributors to the overall growth of the deposit.

These zones and other targets within the hanging wall and footwall represent significant opportunities for further growth. There are nearly 2,000 previous drill hole intersections above 3 g/t Au outside of existing Mineral Reserves and Resources in the hanging wall and footwall, highlighting the opportunity for further near-mine, high-grade additions, as ongoing drilling further defines these areas.

The 2023 regional surface exploration drilling program was successful in identifying high-grade gold mineralization at the Pine-Breccia and the 88-60 targets, located 4 km and 7 km, respectively, from the Island Gold mine highlighting the significant regional potential across the 55,300 hectare Island Gold Property.

A total of $19 million has been budgeted for exploration at Island Gold in 2024, up from $14 million in 2023, with both a larger near mine and regional exploration program.

The 2024 exploration program will follow up on a successful 2023 program with high-grade gold mineralization extended laterally to the West and East as well as within multiple structures within the hanging wall and footwall (see press release dated November 9, 2023). With the deposit open laterally and at depth, this ongoing exploration success highlights the significant potential for further growth in Mineral Reserves and Resources.

The regional exploration program has also been expanded to 10,000 m, up from 7,500 m in 2023. The 2024 program will follow up on high-grade mineralization intersected at the Pine-Breccia and 88-60 targets. Drilling will also be completed in proximity to the past-producing Cline and Edwards mines, as well as at the Island Gold North Shear target.

Drilling

Exploration, Definition, and Delineation drilling

In 2021, a total of 97,016 m of diamond drilling was completed in 469 holes. Drilling in 2021 included 17,143 m of surface directional exploration drilling, 10,597 m of surface regional exploration drilling, 9,458 m of underground directional drilling, 13,862 m of standard underground exploration drilling, 15,555 m of underground definition drilling, and 30,401 m of underground delineation drilling. The focus of the 2021 mine exploration drilling program was to continue to expand the down-plunge and lateral extensions of the Island Gold deposit with the objective of adding new near mine Mineral Resources across the two-km long Island Gold Main Zone.

In 2022, a total of 94,548 m of diamond drilling was completed in 402 holes at Island Gold.

Drilling in 2022 included 30,163 m of surface directional exploration drilling in 31 holes, 19,976 m of standard underground exploration drilling in 89 holes, 9,865 m of underground definition drilling in 92 holes, and 24,837 m of underground delineation drilling in 180 holes. A total of 374 m of underground exploration drift development was also completed in 2022.

The focus of the 2022 mine exploration drilling program was to continue to expand the down-plunge and lateral extensions of the Island Gold deposit with the objective of adding new near mine Mineral Resources across the two-km long Island Gold Main Zone.

In addition, 9,707 m of surface regional exploration diamond drilling was completed in 14 holes, 1,428 m of reverse circulation drilling was completed in 91 holes. Both exploration drilling programs tested several targets across the then 15,524 hectares Island Gold Property.

During 2023, 157 holes totaling 39,110 m were completed as part of the underground exploration program, and 155 holes totaling 31,636 m as part of the underground delineation drilling program. To support the underground program, a total of 404 m of underground exploration drift development was completed in 2023 on the 850, 945, and 1025 m levels. Additionally, 5,131 m of surface drilling was completed in three holes. The regional surface drilling program, focused on the Pine-Breccia and Cline Edwards Plowman targets, was completed in the third quarter of 2023 and included 42 holes over 8,432 m.

Sampling, Analysis, and Data Verification

Alamos Gold maintains an internal QA/QC program at the Island Gold Mine to ensure sampling and analysis of all exploration work is conducted in accordance with best practices.

Access to the Island Gold Mine is controlled by security personnel. Drill core is logged and sampled at the core logging facility within the mine site under the supervision of a Qualified Geologist. A geologist marks the individual samples for analysis, and sample intervals, sample numbers, standards and blanks are entered into the database. The core is cut in half using an electric core saw equipped with a diamond tipped blade. One half of the core is placed into a plastic sample bag and sealed with zip ties in preparation for shipment. The other half of the core is returned to the core box and retained for future reference. The samples are placed in large heavy-duty nylon reinforced Fabrene bags, which are identified and sealed before being placed on pallets. The core samples are picked up at the mine site and delivered to AGAT laboratory in Thunder Bay, Ontario.

Gold is analyzed by a 50 grams fire assay with an Atomic Absorption (AA) finish. Samples greater than 10.0 g/t Au are re-analyzed using gravimetric finish methods. AGAT is a certified laboratory and has internal QC programs that include insertion of reagent blanks, reference materials, and pulp duplicates.

The Company inserts QC samples (blanks and reference materials) at regular intervals to monitor laboratory performance. Cross check assays are completed on a regular basis in a secondary accredited laboratory. The QA/QC procedures are more completely described in the Technical Report filed on SEDAR+ on August 29, 2022.

The chip sampling method consists of taking horizontal representative samples of the exposed ore zone either from the drift face or from the adjacent walls. The geological technician or the geologist takes a 1.5 kg to 2 kg sample which is chipped with a hammer horizontally across geological units on a 0.3 m to 1.0 m distance. The sampler notes the location and the lithology of each chip sample. Assays are then entered into a Promine module on the AutoCAD Software and then transferred into the Gemcom and Datamine softwares.

The database which contains all chip and diamond drilling assays, logging, and surveys is stored on the Alamos private network which can only be accessed by employees directly involved with the process. In 2016, the database was changed from a Microsoft Access database to a structured query language database (SQL) for improved security. Additional restrictions were put in place to limit the number of employees who have access to the database. Security groups are used to limit individuals to parts of the database that is needed for their work. Access must be granted by a supervisor of the Geology Department.

Underground muck and chip samples are sent to the Wesdome Laboratory (“ **Wesdome**”) in Wawa, Ontario.

In 2015, Analytical Solutions Ltd. (“**ASL**”) audited the Island Gold Mine QA/QC program, which consists of inserting blanks and CRM’s to samples submitted to the laboratory (Wesdome, LabExpert, and ActLab). Each laboratory has its own QA/QC program with the addition of analytical blank standards and CRM’s to each batch of assays. Also, some core and chip sample duplicates were taken in 2015 and sent to the laboratories as part of the QA/QC program. ASL concluded that the Island Gold assay quality control program meets or exceeds industry standards and gold assays from the 2015 drill campaign are considered to be reliable for the purpose of Mineral Resource estimation.

Island Gold Mine’s QA/QC procedures were audited again in 2019 by ASL, and it was concluded that Island Gold’s assay quality control program meets or exceeds industry standards and that the gold assays are considered to be reliable for the purpose of Mineral Resource estimates.

Mineral Processing and Metallurgical Testing

The Island Gold Mine has been in production since October 2007. The metallurgy is well known, and overall metallurgical gold recoveries achieved have averaged approximately 96.5% over the past five years. Mineralogical and metallurgical characterization studies were performed in 2013 by the Unité de Recherche et de Service en Technologie Minérale (“**URSTM**”), a research unit affiliated to the Université du Québec Abitibi-Témiscamingue. One set of samples from four

different drill cores was selected and shipped to URSTM. The average gold grade was determined for each core sample. The samples were thereafter combined in a composite that was sent for metallurgical test work. The composite was tested for mineral content using Inductively Coupled Plasma ("**ICP**") chemical analysis, free gold evaluation, and response to cyanidation.

An ICP multi-scan was performed on the composite sample. The ICP was conducted by LabExpert. The results showed that the composite sample did not contain any elements in sufficient concentration to be problematic for gold cyanidation.

The composite sample was tested at the Cégep de l'Abitibi-Témiscamingue for the Bond Ball Work Index (" **BWI**") determination. The BWI expresses the material's resistance to ball milling. A high index value means the material is more difficult to grind. The BWI result was 12.6 kWh/t using the standard test procedure. A 12.6 kWh/t value is in the mid-range of most Canadian gold ores.

Gold leaching of the composite sample was investigated at URSTM. The tests were performed at standard cyanidation conditions with grinds varying from 36 to 101 microns being tested. The leaching performance reached 99% for the finest grind (36 microns) and was slightly lower (down to 96.8%) for the coarsest grind. Cyanide consumption has been found to be low, and it is typical of this kind of non-problematic gold ore.

Mineral Resource and Mineral Reserve Estimation

Mineral Resource and Mineral Reserve estimates can be found in the section titled "December 31, 2023, Mineral Reserves and Resources" following "Other Mineral Properties".

Mining Operations

The primary access for personnel and material at the Island Gold Mine is via a spiral ramp from the Lochalsh portal at surface. This main ramp splits in two at the 410 m level in order to access the Island Gold Lower Zones sector and the Extension 1 sector on the east side. The main ramp (accessing Island Gold Lower Zones) splits in two again at the 740 m level, where one ramp continues towards Island Gold Lower Zones and the other progresses west at depth to enable mining of the Island Gold West Zones.

The primary extraction method is longitudinal long hole retreat mining with a maximum panel length fixed by a hydraulic radius of 6.0 m. Sub levels are fixed every 22 m to 25 m. In 2019, transverse long hole mining was introduced in areas where the orebody widths warranted it. After ore extraction, stopes are backfilled with unconsolidated waste rock fill. In 2019, the mine implemented cemented rock fill in some areas to increase the recovery of ore pillars and increase the long-term stability of certain mined-out areas. Alimak mining is used in a small portion of the Mineral Reserve. The Island Gold ore is brought to the surface by haul trucks using the ramp system.

All mining, except for raise development, is undertaken by Island Gold employees.

Processing and Recovery Operations

The Island Gold ore is hauled by truck to the mill stockpile located approximately 0.8 km from the portal of the ramp. The ore from the stockpile is crushed by a jaw crusher followed by a secondary cone crusher. The crushed material is then sent to a ball mill operated in a closed circuit with cyclones and a regrind mill. Gold is leached in a leaching circuit and extracted in a CIP circuit. Gold is removed from the loaded carbon by elution (stripping) followed by electrowinning. The stripped carbon is regenerated in reactivation kilns before being returned to the process. Fine carbon is constantly removed and recovered from the process to avoid gold loss, while fresh carbon is continuously added to the process. The high grade electrowinning concentrate is sent to a bullion furnace for smelting of doré bars.

Gold recovery of the CIP circuit at the Kremzar mill is approximately 96.5%.

Infrastructure, Permitting, and Compliance Activities

The Island Gold Mine infrastructure includes a primary tailings pond, secondary settling pond, the Kremzar mill (CIP mill), Lochalsh ramp and portal, mine access road, and hydro-electric power lines, all of which are located on the property. An office, core logging, storage facility, and a mine dry are also located on the previously producing Kremzar mine site. When the Kremzar CIP mill was constructed in 1988, it was capable of handling 650 tpd. Since then, its milling capacity was increased to 850 tpd in 2010 and to 900 tpd in October 2015. Island Gold completed a mill expansion to 1,200 tpd in the second half of

2018. The primary tailings pond, which is located west of the Kremzar mine, is a fully permitted tailings area. The tailings and waste rock have been tested and are not acid generating. All permits for mining and milling operations have been maintained.

All permitting activities identify and address the various municipal, provincial, and federal environmental requirements and standards applicable to the Island Gold Mine. In May 2019, the Company was granted amendments to existing permits which allow mill throughput rates to increase from the previously permitted rate of 1,100 tpd to 1,200 tpd. The Island Gold Mine is currently permitted to be designed and operated at a production rate of 461,760 tonnes per year of gold-bearing ore. The Company has recorded an asset retirement obligation liability of $18.3 million, which it expects to settle during mining and on closure.

The Company entered into a Community Consultation and Benefits Agreement with Michipicoten First Nation in 2022 and a Definitive Agreement with Batchewana First Nation in 2023. Previously, the Company entered into a Community Benefits Agreement (CBA) with Missanabie Cree First Nation in 2017. The Island Gold Mine is situated within the traditional territory of these First Nations.

Capital and Operating Costs

The Island Gold Mine was acquired by the Company in late November 2017. Actual results for 2022 and 2023 and guidance for 2024 production, operating costs, and capital are summarized below.

		2022 Actual	2023 Actual	2024 Guidance
Gold Production	(ounces)	133,700	131,400	145,000 - 160,000
Total Cash Costs[(1)]	($/ounce)	637	669	550 - 600
Mine Site All-in Sustaining Costs[(1)]	($/ounce)	918	1,017	875 - 925
Capital	($ millions)	138.5	222.0	260 - 285
Capitalized Exploration	($ millions)	18.8	11.1	13
Mine Site Free Cash Flow[(1)]	($ millions)	(9.2)	(68.2)	N/A

[(1)]Refer to Non-GAAP Measures and Additional GAAP Measures on page 7. Detailed reconciliations of the non-GAAP measures to measures under IFRS for the years ended December 31, 2023, and 2022 can be found in the Company's MD&A for the year ended December 31, 2023, as available on www.sedarplus.ca.

2024 Outlook

Gold production at Island Gold is expected to increase from 2023 to 2024, reflecting higher grades. Grades are expected to increase further into 2025, and following the completion of the Phase 3+ Expansion in 2026, mining rates are expected to begin ramping up towards 2,400 tpd. The production rates are expected to increase to average 287,000 ounces per year in 2027 and beyond.

Total cash costs and mine-site AISC are expected to decrease 8% in 2024, compared to 2023, reflecting higher grades, partly offset by ongoing cost inflation, particularly labour in Northern Ontario. Costs are expected to decrease further into 2025 and 2026, reflecting higher grades in 2025, and higher mining rates and productivity improvements with the completion of the Phase 3+ Expansion in 2026.

Capital spending at Island Gold (excluding exploration) is expected to be between $260 and $285 million in 2024. Construction activities in 2024 will be focused on the shaft sinking, which began in December 2023, and the start of work on the paste plant and mill expansion. Capital spending is expected to remain at similar levels in 2025 and decrease substantially in 2026, with the Phase 3+ Expansion on schedule to be completed during the first half of 2026.

Phase 3+ Expansion Study

On June 28, 2022, the Company reported the results of the positive P3+ Expansion Study conducted on its Island Gold Mine. Based on the results of the P3+ Expansion Study, the Company is proceeding with an expansion of the operation to 2,400 tpd. This follows the release of the Phase III study in July 2020, which demonstrated that the conversion to shaft mining at a rate of 2,000 tpd was feasible and had the most positive economics of the various expansion options studied. The P3+ Expansion Study was prompted by the significant increase in Mineral Resource since 2020 and has demonstrated a project with higher production at a lower capital intensity. The P3+ Expansion is expected to drive average annual gold production to 287,000

ounces per year upon completion of the shaft in 2026, representing a 106% increase from 2020 production. This is also expected to reduce total cash costs to an average of $425 per ounce and mine-site AISC to $576 per ounce.

Additional permitting for the P3+ Expansion is currently ongoing, with the Company actively pursuing all required permits for the expansion up to 2,400 tpd. As part of this, there is a detailed consultation process with local First Nation communities, including the consideration and negotiation of Impact & Benefit Agreements.

The P3+ Expansion Study technical report was filed on SEDAR+ on August 29, 2022. The Phase 3+ Expansion to 2,400 tpd from the current rate of 1,200 tpd will involve various infrastructure investments. These include the installation of a shaft, paste plant, expansion of the mill as well as accelerated development to support the higher mining rates. Following the completion of the expansion in 2026, the operation will transition from trucking ore and waste up the ramp to skipping ore and waste to surface through the new shaft infrastructure, driving production higher and costs significantly lower.

Construction in 2023, included the start of shaft sinking in December 2023, which was a significant milestone for the project. Further details on progress to the end of 2023 are summarized below:

- Completed the grid power tie-in for the shaft site and upgraded voltage regulation facility
- Commissioned the shaft sinking plant
- Mechanical and electrical outfitting for hoist house and headframe substantially complete
- Completed structural steel, roofing, interior and exterior cladding for the warehouse
- Completed buried services required for shaft sink, with first blast occurring in December
- Paste plant detailed engineering 75% complete; issuance of long lead time equipment procurement packages is ongoing with construction activities expected to begin in the second half of 2024
- Mill expansion basic engineering completed, and detailed engineering commenced in December with overall engineering being 40% complete. Issuance of long lead time equipment procurement packages is ongoing with construction activities on the mill expansion expected to commence in the second quarter of 2024
- Advanced lateral development to support higher mining rates with the Phase 3+ Expansion
- Receipt of Closure Plan Amendment #2 in December 2023 allowing for construction of all remaining Phase 3+ infrastructure

The Phase 3+ Expansion remains on schedule to be completed during the first half of 2026.

MULATOS MINE

Summary

The Mulatos Mine is located 220 km east of Hermosillo in the state of Sonora in northwest Mexico. The Company owns 100% of the Mulatos Mine and several other prospective exploration targets throughout the district. The mine includes a number of open pit mines, two crushing facilities, two heap leaching facilities, a high-grade mill, gold processing facilities, and related infrastructure. The mine has been in continuous operation since 2005, producing over 2.7 million ounces in that period.

Project Description, Location, and Access

The Mulatos Mine is located in the Sierra Madre Occidental mountain range in the east-central portion of the state of Sonora, Mexico. Alamos controls several large mineral concessions, which are located mostly to the west, southwest, and north-northeast of the Mulatos Mine. A total of 28,973 hectares of mineral concessions, in 44 discrete concessions, are controlled by Alamos. The property is approximately 220 km by air east of the city of Hermosillo, and 300 km south of the United States border. Alamos maintains an administration office in Hermosillo, Mexico, which supports the activities and operations of the Mulatos Mine.

The Mulatos group of concessions covers the Mulatos deposit and satellite gold systems known as Cerro Pelon, La Yaqui, El Carricito, El Halcon, Las Carboneras, El Jaspe, Puebla, Los Bajios, and La Dura (the "**Mulatos Group of Concessions**"). The Mulatos deposit is itself divided into a number of mineralized zones known as Estrella, Mina Vieja, El Salto, Escondida, Gap, El Victor, El Victor North, San Carlos, Puerto Del Aire ("**PDA**"), PDA Extension, and East Estrella. Mineral rights for all concessions comprising the Mulatos Group of Concessions are controlled by Minas de Oro Nacional ("**MON**"), the Mexican subsidiary of Alamos.

Surface rights in the exploitation area are held both privately and by the Ejido Mulatos. In December 2016, the Company and the Ejido Mulatos entered into a new temporary occupation agreement which, among other things, provided for the dismissal of several lawsuits related to both the Company's operations and prior occupation agreements; as well, replaced all prior temporary occupation agreements governing the communal land underlying the Mulatos Mine. The temporary occupation agreement also provides for both annual rent payments to Ejido Mulatos members (both individually and collectively) as well as additional success fee type payments, better aligning the interest of the Company and the local community.

There are no third-party royalties on the Mulatos Group of Concessions.

The Mulatos Group of Concessions is accessible via a combination of a paved road (Highway 16) from the city of Hermosillo, Sonora, and gravel roads direct to the Mulatos Mine. The driving time from Hermosillo to the Mulatos Mine is approximately six hours. In 2010, the Company built and permitted a new unpaved airstrip within the limits of the mine property.

The town of Mulatos is in the municipality of Sahuaripa and is located approximately 0.5 km northeast of the Estrella Pit. The population of the town of Mulatos is less than 7 people. The Company is currently engaged in a relocation program. Larger towns within 100 km of Mulatos include Yecora, with a population of 10,000, located southwest of Mulatos, and Sahuaripa, with a population of 7,000, located northwest of Mulatos.

From July to September, the air is humid and hot, typically around 30 degrees Celsius during the day. In this period, over half of the average annual rainfall of 0.8 m falls. The winter months (November to February) are cooler, generally between 15 and 20 degrees Celsius during the day, with occasional frost occurring at night.

History

Mulatos was known to contain gold dating back to the 1600s, with sporadic artisanal mining occurring over the years, especially in the area of Mina Vieja. Starting in the mid-1900s, several companies began to show interest in the claim areas, notably Minera Real de Angeles, Kennecott, and Placer Dome, with a substantial amount of exploration work conducted between 1993 and 1999. A preliminary feasibility study was completed on the property in 1998 by Kennecott and Placer Dome who had entered into a joint venture agreement covering the deposit and a portion of the surrounding land.

In 2001, National Gold Corporation acquired a 100% interest in the property for cash and a sliding-scale royalty on the first two million ounces of gold production. In 2003, Alamos Minerals Ltd. acquired an option on the property and subsequently merged with National Gold Corporation to consolidate 100% ownership.

After completion of a feasibility study in 2004, an open pit operation with crushing and conveying to a heap leach pad at a rate of approximately 10,000 tpd was constructed. The operation commenced production in April 2006. Since 2006, the Mulatos crushing facility has undergone numerous expansions and optimizations to increase capacity to a nominal 18,500 tpd.

In addition to the existing heap leach operations at the Mulatos Mine, between 2009 and 2012, Alamos developed the Escondida high-grade zone and constructed a mill to process high-grade ore from Escondida. The high-grade Escondida deposit was depleted in the second quarter of 2014. Alamos commenced underground development of the San Carlos high-grade underground deposit in 2015 and undertook modifications to the mill to cater to the specific metallurgy of San Carlos. Mining at San Carlos ceased in the third quarter of 2018.

In September 2017, the Company completed construction of La Yaqui Phase I. The deposit was mined until the fourth quarter of 2019.

During the fourth quarter of 2018, the Company received approval of the MIA and CUS permits for Cerro Pelon and commenced full-scale construction. Construction of Cerro Pelon was completed at the end of 2019 and consisted of an open pit and its own dedicated crushing facility feeding the existing Mulatos heap leach facility. Mining at Cerro Pelon ceased in the fourth quarter of 2021 with the depletion of the ore body.

Mining of the Victor open pit was completed in Q2 of 2021, and the San Carlos open pits was completed in Q4 of 2021.

Mining of the main Mulatos open pit was completed in Q3 of 2023, and all the crushing and stacking of all existing surface stockpiles was competed in Q4 of 2023.

In July 2020, the Company reported the results of the positive internal economic study completed on its fully permitted La Yaqui Grande Project. Given the project's strong economics and its proximity to the existing Mulatos operation, the Company proceeded with the construction of the project in the third quarter of 2020. Construction was completed ahead of schedule in June 2022, first gold production was reported in August 2022, and the plant was operating at the design rate of 10,000 tpd by the end of 2022. Based on December 31, 2023 Mineral Reserves, La Yaqui Grande is expected to be in production until 2027.

Mulatos District exceeded guidance, producing 212,800 ounces in 2023, a 58% increase from the prior year, reflecting a strong performance from La Yaqui Grande in its first full year of production. The higher margin ounces from La Yaqui Grande (153,400 ounces produced) drove a significant increase in mine-site free cash flow to $142.1 million.

Geological Setting, Mineralization, and Deposit Types

The Mulatos mineral deposits are large epithermal, high-sulfidation, disseminated, gold deposits hosted within a mid-Tertiary dacitic dome complex. Gold mineralization is closely associated with silicic alteration within extensive areas of argillic and advanced argillic alteration. The Mulatos deposit proper is composed of the contiguous Estrella, El Salto, Mina Vieja, and PDA Mineral Resource areas. The Escondida deposit is the faulted extension of the Mina Vieja and El Salto sub-deposits and is believed to be continuous to the northeast with the Gap, El Victor, and San Carlos mineralized areas. Although zones are often bounded by post-mineral faults, together they form a trend of 2.7 km of gold mineralization starting at the north end of the Estrella pit to the San Carlos deposit.

Within the larger Mulatos Group of Concessions, and generally within 20 km from the Mulatos deposit, geologically similar high sulfidation gold deposits, occurrences, or prospects are known. The principal ones, some of which are in the process of being evaluated and/or drill-tested, are: El Carricito, El Halcon, Las Carboneras, and El Jaspe.

Gold deposits of the Mulatos district are considered to be high sulphidation-state epithermal systems. Epithermal precious metal systems may be classified as high, intermediate, and low sulphidation styles. They are characterized by the sulphidation state of the hypogene sulphide mineral assemblage, and show general relations in volcano-tectonic setting, precious and base metal content, igneous rock association, proximal hypogene alteration, and sulphide abundance. Ore in all occurrences is of the type formed under epizonal conditions, that is, generally within 2 km of the paleo-surface.

Precious metal mineralization at Mulatos is associated with intense silicic alteration (mostly vuggy silica), advanced argillic alteration, and the presence of hydrothermal breccias. The original protolith (dacite porphyry flow/tuff, coarse-grained volcaniclastic rocks, breccias), as indicated by surface mapping and core drilling, may have contained in the order of 2-3% sulphide as pyrite with various amounts of enargite and tetrahedrite. The principal gold-bearing host rock is interpreted as favoured for mineralization due to relatively high primary porosity and its intense fracturing.

Gold mineralization within the Mulatos deposit occurs primarily within areas of pervasive silicic alteration of the volcanic host rocks, and to a lesser extent, within advanced argillic alteration assemblages proximal to silicic alteration. The gold-bearing advanced argillic zones are dominated by pyrophyllite or dickite alteration. Silicic rocks host approximately 80% of the contained gold within the deposit. There are three main mineralization assemblages. From oldest to youngest, they are: 1) quartz + pyrite + pyrophyllite + gold; 2) quartz + pyrite + kaolinite + gold + enargite; 3) kaolinite + barite + gold. Free gold is commonly found in hematite-filled fractures. Gold also occurs in pyrite, as gold/silver telluride minerals, and possibly as a solid solution in some copper sulphide minerals. Supergene oxidation and perhaps remobilization and secondary enrichment of gold have been ongoing since the post-mineral volcanic cover was removed (in those specific deposits where it has been removed).

Exploration

Substantial drilling programs have been completed by Alamos since the Mulatos 2004 feasibility study. Including drilling completed in conjunction with the 2004 feasibility study, the property has now been subject to over 872,692 m of drilling in 5,215 holes. The majority of this drilling was completed in proximity to the Mulatos deposit, although from mid-2015 through 2016-2017, exploration focused mainly on the La Yaqui deposit, with 28,783 m drilled during 2017. During 2018, exploration drilling totaled 34,506 m on targets across the Mulatos concessions.

In 2019, exploration drilling totaled 7,996 m as efforts were focused on mapping and geophysical surveys to further advance several regional target areas.

In 2020, exploration activities were impacted by COVID-19, resulting in a limited drill program totaling 8,032 m in the Carricito and Carboneras areas.

A total of 21,029 m of drilling was completed in 2021 at PDA, Carricito, Halcon West, and Los Venados, as well as geological mapping and sampling in several target areas across the large 28,972 hectare property.

In 2022, 32,301 m of exploration drilling was completed in 119 drill holes at PDA, Carricito, Halcon, Halcon West, and Refugio.

In 2023, 83,066 m of drilling was completed on the Mulatos property. Infill drilling at the Puerto del Aire sulphide deposit accounted for 54,666 m in 186 drill holes. An additional 2,221 m of drilling was completed in 10 (1 abandoned) geotechnical holes at the deposit. Regionally, 25,459 m of drilling was completed in 79 drill holes, with the majority targeting the newly discovered Capulin Target in the Refugio Project. Drone magnetic and ground induced polarization surveys were also completed during 2023 at the Capulin Target and Cerro Pelon south areas.

The 2023 Exploration drilling program at PDA resulted continued growth in Mineral Reserves, increasing 33% to 1.0 million ounces at 16% higher grades of 5.61 g/t Au. This was driven by a tightly spaced step out drill program which not only expanded the size of the deposit, but also improved continuity and better defined its geometry resulting in another increase in grades. Over the past two years, PDA's Mineral Reserves have more than doubled, at 20% higher grades.

Combined Mineral Reserves and Resources also increased 26% in 2023 to total 1.2 million ounces. With the deposit open in multiple directions, and another significant exploration program planned for PDA in 2024, there is excellent potential for this growth to continue. Over the past three years, discovery costs at PDA have averaged $19 per ounce.

A highlight from the 2023 regional exploration program was the discovery of the Capulin zone located approximately four kilometres east of the Mulatos open pit, and two kilometres east of the former San Carlos open pit, in an area that had seen limited historical exploration.

Drill hole 23REF012 intersected a significant interval of oxide and sulphide gold mineralization, 2.01 g/t Au over 82.45 m core length including 4.81 g/t Au over 16.40 m and 5.38 g/t Au over 12.35 m in a breccia unit adjacent to the Capulin Fault Zone. This hole was a 75 m step-out to the northwest from drillhole 17REF015, which was drilled in 2017 and intersected 1.00 g/t Au over 13.80 m. The recognition of the mineralized breccia in 23REF012 and recent mapping has triggered a re-interpretation of the geology in this area east of the past producing San Carlos Mine. Drillhole 23REF022 was completed as a 25 m step-out to the west of 23REF012, and intersected 2.73 g/t Au over 120.85 m core length, including 9.31 g/t Au over 29.05 m in a wider and higher-grade zone of oxide and sulphide gold mineralization in the breccia.

Drilling

Drilling statistics for 2023 and project-to-date are presented below:

2023 Core Drilling

Zone Drilled	Drill Holes Completed (# 2023)	Total # Drill Holes on Project	Drilling 2023 (m)	Total Drilling on Project (m)
Carricito	12	207	2,064	43,736
Cerro Pelon	23	229	6,272	38,274
El Refugio	34	71	11,796	21,262
Los Bajios	1	35	656	10,915
Halcon	0	92	-	22,463
Mulatos Deposit [(1)]	198	976	57,607	185,725
All others areas	9	971	4,672	125,661
Total	277	2,581	83,066	448,036

[(1)]PDA drilling is included in the Mulatos Deposit summary

2023 Reverse Circulation Drilling

Zone Drilled	Drill Holes Completed (# 2023)	Total # Drill Holes on Project	Drilling 2023 (m)	Total Drilling on Project (m)
La Yaqui	0	217	0	31,294
San Carlos	0	364	0	89,120
Cerro Pelon	0	165	0	30,490
El Refugio	0	0	0	0
Los Bajios	0	62	0	12,538
Halcon	0	36	0	5,759
Mulatos Deposit	0	2,154	0	342,360
All other areas	0	293	0	50,600
Total	0	3,291	0	562,164

Mulatos Main Zone

The Mulatos Main Zone is a continuous zone of mineralisation that comprises the La Estrella, La Escondida, Mina Vieja, El Salto, PDA, Gap, El Victor, and El Victor North deposits. This whole zone shows similar geological characteristics with comparable styles of mineralization. Dacitic and rhyodacitic rocks have undergone intense silica alteration (often vuggy), which is the key host for mineralisation. These zones are often blind, being overlain by a relatively thick sequence of ignimbrite flows. Historically, these flows have been referred to as post-mineral, but recently acquired data shows portions of it to host vein-style mineralisation. This has been seen at San Carlos, and similar potential is currently being investigated in Gap, El Victor, and PDA. Sets of post-mineral faulting have caused some offset of the mineralisation (to varying extents) throughout this entire zone.

Mineralisation is usually stratiform with some local structural control, especially on high grades and zones of brecciation. This structural control that directly affects higher grades has been identified at La Estrella and PDA Deposits and is also likely at Gap. Within the stratiform mineralisation higher grades are sometimes seen along the upper contact of the vuggy silica alteration. Alamos conducted exploration systematically through this zone commencing in 2006 and by the end of 2014, 338,470 m had been drilled.

Puerto Del Aire

Exploration drilling recommenced at PDA in 2021 and continued through 2022. PDA is a higher-grade underground deposit located adjacent to the main Mulatos pit, and is comprised of five mineralized zones – PDA1, PDA2, Gap, Victor, and Estrella. In February 2022, Alamos announced an initial Mineral Reserve at PDA totaling 428,000 ounces (2.85 Mt grading 4.67 g/t Au) as part of the December 31, 2021, Mineral Reserve and Mineral Resource update. In addition to the Mineral Reserve, Measured and Indicated Mineral Resources totaled 124,000 ounces (0.77 Mt grading 5.05 g/t Au).

Mineral Reserves were determined based on Mineral Resource estimations that were completed within gold mineralization wireframes that were finalized in July 2020 and April 2021, based on detailed geological modelling.

The objectives of the 2021 and 2022 exploration drilling programs were to expand mineralization - either as step outs from existing Mineral Resources, or targeting areas within the previously interpreted mineralization wireframe that did not contain a Mineral Resource due to limited drilling. From April 2021 to year-end 2022, 92 drill holes totaling 27,117 m were completed at PDA, and were included in the YE2022 Mineral Resource.

The exploration drilling program at PDA continued in 2023, with 56,712 m of drilling completed in 196 holes, including 10 geotechnical holes totaling 2,221 m. The focus of the exploration drilling program was: (1) continuing to step out from existing Mineral Resources, (2) targeting areas within the mineralization wireframe that did not contain Mineral Resources due to limited drilling, and (3) targeting along structures that control higher-grade mineralization within the deposit.

PDA is expected to be mined from underground and accessed from a ramp and development drifts off the main Mulatos pit. This will greatly reduce the development needed to access the deposit. The higher-grade ore from PDA will likely be milled. PDA may incorporate elements of the existing mill at Mulatos that was recently used to process underground ore from San Carlos, but a significant expansion of the throughput rate will be required. Work planned for 2024 includes updating the mine plan to reflect project to date drilling and finalizing operating and capital costs for mining and milling.

Drilling to date has demonstrated the significant potential to further expand high-grade mineralization at PDA with the deposit open in multiple directions.

La Yaqui & La Yaqui Grande

The La Yaqui Project is located approximately 9.5 km southwest of the Mulatos Main Zone. After a successful negotiation in 2007, Alamos gained exploration access to La Yaqui for the first time since 1997. Exploration drilling commenced shortly after and continued into 2008, with 11,514 m drilled in 84 holes.

The results of drilling were incorporated into Alamos' Measured and Indicated Mineral Resource statement as of December 31, 2008. In 2009, Alamos completed engineering work and an economic evaluation and reported its first Probable Mineral Reserve on December 31, 2009.

Access once again became an issue until 2014, when Alamos executed an agreement to acquire the surface rights. On closing of this agreement Alamos commenced work towards permitting and construction on this project.

Exploration programs over the larger La Yaqui Grande area began immediately with a detailed mapping and sampling program undertaken in late 2014 and early 2015. A total of 556 rock chip samples were taken, and an area of 1,950 m x 2,210 m was covered by mapping and sampling. Infill, geotechnical and metallurgical drilling was carried out concurrently with mapping and sampling while exploration drilling commenced afterward. In 2015, a total of 17,517 m were drilled on the project in 105 holes.

This drilling intersected ore-grade mineralisation over a one km strike length along the ridge-top to the northeast of in-pit Mineral Reserves. Mineralisation is associated with quartz-alunite altered dacitic rocks and usually sits below a barren massive silica cap. The drilling carried out in 2015 was widely spaced and purely exploratory in nature. Drill results received in 2015 include 1.36 g/t Au over 117.4 m (15YAQ058), 1.34 g/t Au over 64.0 m (15YAQ064), and 2.03 g/t Au over 32.0 m (15YAQ068).

Drilling in 2015 had outlined 3 potential zones of mineralization; Zones 1 - 3. Zone 1 sits at the southeast end of the northwest trending silica ridge, with Zone 2 further to the northwest and Zone 3 located further northwest again. Gold mineralisation in Zone 1 is associated with a north-south trending structural corridor and as a result, is more linear in morphology. Zone 2 is more stratiform in nature and dips to the northeast at approximately 35-40 degrees (sub-parallel to topography). While the main

control on mineralisation in Zone 2 appears to be lithological, a higher grade section may be associated with structural intersections.

An interim Mineral Resource statement was calculated for La Yaqui Grande in September 2016. This included 27,201 m of drilling from Zones 1 and 2 only.

The main focus for exploration at La Yaqui Grande in 2017 was drilling out Zone 3 in the north of the prospect, the east area of Zone 2 as well as infill drilling in Zone 2. A complete re-logging of the existing drill core followed by geological modeling of the three zones of La Yaqui Grande was also undertaken in 2017. Geological mapping and sampling were extended northwards to cover all of Zone 3 and areas farther north and a campaign of revision geological mapping was undertaken over the entire Yaqui prospect to obtain conformity between subsurface geology interpreted from drill core with surface geology. At the end of the year a geological model was compiled for La Yaqui Grande, and the Mineral Resource and Mineral Reserve estimates were updated in January 2018. Some of the best drill intercepts obtained during 2017 include: 36.5 m at 6.15 g/t Au (17YAQ133); 35.6 m at 3.41 g/t Au (17YAQ118); 23.1 m at 2.81 g/t Au (17YAQ065); and 10.8 m at 4.88 g/t Au (17YAQ129).

2024 Exploration Outlook

A total of $19 million has been budgeted at Mulatos for exploration in 2024, similar to spending in 2023. The near-mine and regional drilling program is expected to total 55,000 m. This includes 27,000 m of surface exploration drilling at PDA and the surrounding area. This drilling will follow up on another successful year of exploration at PDA, with high-grade mineralization expanded in multiple directions beyond Mineral Reserves and Resources at the higher-grade underground deposit.

Given the ongoing growth of the PDA deposit, other higher-grade sulphide opportunities will be targeted within the Mulatos District in 2024. This includes an initial 2,000 m of follow up drilling at the previously mined Cerro Pelon deposit, where high-grade mineralization was intersected north of the mined-out open pit in 2015. This included 14.47 g/t Au over 50.30 m (15PEL012) and 9.65 g/t Au over 34.60 m (15PEL020).

Within the regional exploration program, 26,000 m has been budgeted. Nearly half will be focused on the Capulin target located 4 km from the Mulatos pit, where significant, wide intervals of oxide and sulphide gold mineralization were intersected in 2023. This included the previously reported 2.01 g/t Au over 82.45 m core length (23REF012), and 2.73 g/t Au over 120.85 m core length, including 9.31 g/t Au over 29.05 m (23REF022). The remainder of the regional program will be focused on drilling at other high priority targets, including Cerro Pelon West and South.

Sampling, Analysis, and Data Verification

Alamos Gold maintains an internal QA/QC program at Mulatos to ensure sampling and analysis of all exploration work is conducted in accordance with best practices.

Access to the Mulatos Property is controlled by security personnel. Drill core is logged and sampled at the core logging facility within the mine site under the supervision of a Qualified Geologist. A geologist marks the individual samples for analysis, and sample intervals, based on lithology and alteration, standards and blanks are entered into the database. The core is cut in half using an electric core saw equipped with a diamond tipped blade. One half of the core is placed into a micropore sample bag and sealed with a cable tie in preparation for shipment. The other half of the core is returned to the core box and retained for future reference. The samples are placed in large heavy-duty nylon reinforced micropore bags, which are identified and sealed before being dispatched. The core samples are picked up at the mine site and delivered to Bureau Veritas Commodities Canada Ltd. laboratory in Hermosillo, Mexico.

Gold is analyzed by 30 grams Lead Collection Fire Assay Fusion (FA) that ends with an Atomic Absorption Spectroscopy finish (AAS). Samples greater than 5.0 g/t Au are re-analyzed starting again with an FA process but ending with a gravimetric finish (GRAV). Bureau Veritas is an ISO/IEC 17025 accredited laboratory and has internal QC programs that include insertion of reagent blanks, reference materials, and pulp duplicates that are in line with normal requirements, as well as participating in yearly proficiency tests to evaluate lab performance.

The Company inserts QC samples (blanks and reference materials) at regular intervals to monitor laboratory performance. Cross check assays are completed on a regular basis in a secondary accredited laboratory.

Mineral Processing and Metallurgical Testing

The Mulatos deposit and surrounding deposits are amenable to cyanidation and heap leaching, as determined by lab scale testing conducted prior to project construction. The test work indicated that mineralized material varies from pure oxide to pure

sulphide, with gold recovery typically varying from 55% to 90% as material grades from sulphide to oxide. Actual recoveries experienced early in the project life were below this as run-of-mine un-crushed material, coarse crushed material, and an area of low-recovery material were stacked on the leach pad at various times since mine commissioning. The Company has completed several operational initiatives that have improved leach pad percolation and resulted in higher gold recoveries, including conveying and stacking ore on the leach pad, implementing a drum agglomeration process, and closing the crushing circuit to reduce the crusher discharge size to as close to 100% passing 3/8 of an inch as possible. As a result, recoveries have improved significantly.

Metallurgical testing of PDA underground material is currently being finalized. Due to its sulphidic nature, it is expected that PDA will be milled, likely incorporating elements of the existing sulphide mill most recently used to process the San Carlos underground ore.

Mineral Resource and Mineral Reserve Estimates

Mineral Resource and Mineral Reserve estimates can be found in the section following “Other Mineral Properties” titled “December 31, 2023, Mineral Reserves and Resources”.

Mining Operations

With the completion of mining at the Mulatos open pit in Q2 of 2023 the company is currently mining from only the La Yaqui Grande open pit. The Company completed development of the La Yaqui Grande open pit project in Q2 of 2022. La Yaqui Grande has a dedicated crushing facility and leach pad. Loaded carbon is transported to the Mulatos ADR for further processing. Mining of La Yaqui Grande is undertaken by a contractor.

Processing and Recovery Operations

The Mulatos processing facilities consist of a heap leach pad with an associated crushing plant, and a high-grade mill.

Crushing and stacking at the Mulatos facility was completed in Q4 2023. Run of mine heap leach ore from the open pit was crushed in a four-stage plant to 100% passing -3/8”. Following quaternary crushing, the ore was transported via a 1.7 km overland conveyor to the leach pad. At the leach pad, cement was added via two agglomerators and the ore was then transported via grasshopper portable conveyors to a stacker where it was stacked in 7 m lifts.

Cyanide leach solution is applied to each lift for approximately 90 days. The gold-bearing solution reports to one of two “pregnant” solution ponds via gravity. Pregnant solution is pumped to the ADR, where gold is recovered through the carbon absorption columns, carbon stripping, and electrowinning to produce doré bars containing gold and silver in the refinery. Residual leaching of the Mulatos heap leach is expected to continue into 2025.

With the depletion of the San Carlos underground in 2018, the high-grade mill has been placed on care and maintenance. This mill is expected to be used for the future processing of underground ore from the PDA deposit.

The La Yaqui Grande processing facilities consist of a heap leach pad with an associated crushing plant and carbon columns. Run of mine ore from the La Yaqui open pit is crushed in a three stage plant to 100% passing -3/4". The crushed ore is agglomerated prior to being conveyed to the leach pad via a series of grasshopper conveyors and stacked with a radial stacker. Pregnant solution is processed in a single line of carbon columns, and loaded carbon is trucked to the Mulatos ADR facility for gold recovery.

Gold recovery of the La Yaqui Grande heap leach material is expected to be between 80% and 85%.

Infrastructure, Permitting, and Compliance Activities

Due to its distance from large population centers, the Mulatos complex maintains a camp at the Mulatos site and a camp at the La Yaqui Grande site. Each camp includes accommodation, kitchen, medical and recreational facilities. The camp facilities are maintained by an outside contractor. Employees are bussed to the mine site from Hermosillo and work a nominal 14 days on 7 days off rotation.

There are currently two power plants in operation at the Mulatos Mine. The first power plant is a generating plant consisting of four-1,100 kilowatt and two-2,000 kilowatt, diesel electrical generating sets which supply electrical power for all mine site usage. The second power plant was constructed for the closed crushing circuit and future expansion and consists of five-1,750

kilowatt generating sets and is expandable to host up to six generating sets. A temporary power plant has been installed at the La Yaqui Grande site. Mulatos is constructing a power line to bring grid power to both mine sites, negating the need to operate the diesel-powered power plants. It is expected that this project will be completed in 2024.

The Company is permitted to mine its Mineral Reserves at the Mulatos and La Yaqui Grande pits and has obtained the required surface rights to carry on mining, processing, and exploration activities in these areas. In 2014, Alamos completed negotiations to acquire additional land surface rights covering and surrounding the La Yaqui and Cerro Pelon satellite deposits. From time to time, the Company acquires additional permanent and temporary surface rights to explore additional targets within the Mulatos Group of Concessions.

The 2004 feasibility study identified the potential for acid rock drainage. Measures to prevent acid rock drainage were incorporated into the construction of the Mulatos Mine. Standard mining and construction practices in Mexico and guidelines issued by the World Bank were followed in the development and construction of the Mulatos Mine.

The Company complies with all environmental obligations set out in its mining plan, including eventual reclamation of mine and exploration roads, drill set-up, dumps, and the heap leach pads. The Company has recorded an asset retirement obligation liability of $95.7 million, which it expects to settle during the course of mining and on closure. The Mulatos Mine undertakes ongoing reclamation of waste dumps and leach pads.

The Company is in receipt of all permits to operate its existing mines and facilities.

The nearby village of Mulatos is largely protected from noise, dust, vibration, and fly rock by the Mina Vieja outcrop. The Company proactively monitors noise, dust, and vibration levels to ensure that they are within acceptable limits, and the Company takes every precaution to minimize the impact of its mining operations on the local community. In 2016, the Company worked collaboratively with residents of Mulatos to begin a voluntary relocation. Over 95% of families have been resettled, with many residents choosing to relocate to Matarachi, where the Company built new homes, a school, church, and medical clinic. The Company continues to work collaboratively with residents to build a shared community vision and provide ongoing medical and educational assistance to the town of Matarachi as well as employment opportunities.

Capital and Operating Costs

Actual results for 2022 and 2023, and guidance for 2024 production, operating costs, and capital are depicted below.

		2022 Actual	2023 Actual	2024 Guidance
Gold Production[1]	(ounces)	134,500	212,800	160,000-170,000
Total Cash Costs[2]	($/ounce)	1,134	883	925-975
Mine Site All-in Sustaining Costs[2]	($/ounce)	1,241	967	1,000-1,050
Capital	($ millions)	59.9	18.6	5-10
Capitalized Exploration	($ millions)	2.8	11.8	9
Mine Site Free Cash Flow[2]	($ millions)	(36.8)	142.1	N/A

[1] The Mulatos District includes both the Mulatos pit, as well as La Yaqui Grande.

[2] Refer to Non-GAAP Measures and Additional GAAP Measures on page 7. Detailed reconciliations of the non-GAAP measures to measures under IFRS for the years ended December 31, 2023, and 2022 can be found in the Company's MD&A for the year ended December 31, 2023, as available on www.sedarplus.ca.

2024 Outlook

Combined gold production from the Mulatos District is expected to be between 160,000 and 170,000 ounces in 2024.

Total cash costs are expected to be between $925 and $975, and mine-site AISC between $1,000 and $1,050 per ounce in 2024, which are expected to be similar to 2023. The ounces recovered from the Mulatos heap leach pad are expected to carry a reported mine-site AISC of approximately $1,850 per ounce. The cash component to be spent to recover these ounces in 2024 is expected to be approximately $800 per ounce, providing significant free cash flow. Total cash costs and AISC are expected to increase slightly through the year, driven primarily by the grade sequence at La Yaqui Grande.

Capital spending is expected to total $5 to $10 million in 2024, down from 2023 with no major capital projects remaining at La Yaqui Grande. Capital spending is expected to remain at similar levels in 2025 and 2026, excluding PDA. Additional details on the PDA development plan are expected to be published in the first quarter of 2024.

OTHER MINERAL PROPERTIES

Lynn Lake (Manitoba, Canada)

On August 2, 2023, the Company reported results from the positive updated feasibility study conducted on the Lynn Lake Gold Project, located in northern Manitoba, Canada. The Lynn Lake Feasibility Study Update Technical Report was filed on SEDAR+ on August 22, 2023.

Lynn Lake Feasibility Study Update Highlights

- Declaration of Proven and Probable Mineral Reserve of 47.6 million tonnes grading 1.52 g/t Au, containing 2.3 million ounces of gold;
- Average annual gold production of 176,000 ounces over the first ten years with a total life of mine production of 2,185,000 ounces over a 17 year mine life;
- Life of mine total cash costs of $722 per ounce of gold and mine-site AISC of $814 per ounce;
- Initial capital estimate of $632 million, and total sustaining capital and closure costs, of $201 million; and
- After-tax NPV of $438 million at a 5% discount rate and an after-tax IRR of 17%, representing a 3.7-year payback using a base case gold price assumption of $1,675 and a US dollar to Canadian dollar exchange ratio of $0.75.

On March 6, 2023, the Company announced that the federal Environmental Impact Assessment for the Lynn Lake Gold Project has been completed and a positive Decision Statement has been issued by the Minister of Environment and Climate Change Canada. As well, in accordance with *The Environment Act* (Manitoba), the Province of Manitoba has issued Environment Act Licenses for the MacLellan and Gordon sites. Having achieved these milestones, the Company will continue obtaining other project related permits. The negotiation of formal agreements with directly affected First Nations will also continue.

The Company has a budget $25 million in 2024 for the completion of detailed engineering and site early works in anticipation of a construction decision on the Lynn Lake project in 2025.

A total of $9 million has been budgeted for exploration at the Lynn Lake Gold Project in 2024, up from $5 million in 2023. This includes 15,500 m of drilling focused on the conversion of Mineral Resources to Mineral Reserves at the Burnt Timber and Linkwood deposits, and to evaluate the potential for Mineral Resources at Maynard, an advanced stage greenfield target.

Burnt Timber and Linkwood contain Inferred Mineral Resources totaling 1.6 million ounces grading 1.1 g/t Au (44 million tonnes) as of December 31, 2022. The Company sees excellent potential for this to be converted into a smaller, higher quality Mineral Reserve, which could be incorporated into the Lynn Lake Gold Project given its proximity to the planned mill. This represents potential production and economic upside to the Feasibility Study completed on Lynn Lake in August 2023.

Burnt Timber and Linkwood are accessible by an all-season gravel road from Highway 397, 24 km and 28 km from the proposed MacLellan mill, respectively. The Maynard target is located 5 km northwest of the Linkwood deposit, 1 km from the all-season gravel road, and 20 km from the proposed MacLellan mill.

The Company will also continue evaluating and advancing a pipeline of prospective exploration targets within the 58,000 hectare Lynn Lake property in 2024.

Kirazlı, Ağı Dağı, and Çamyurt (Türkiye)

During the first quarter of 2017, the Company reported results from the positive feasibility studies conducted on the Kirazlı and Ağı Dağı Gold Projects, located in the Çanakkale Province in northwestern Türkiye. The studies were an update to the pre-feasibility studies completed on the projects in 2012. For complete details of the Kirazlı feasibility study, see the Company's news release dated February 15, 2017. The feasibility study was filed on SEDAR+ on March 31, 2017. For complete details of the Ağı Dağı feasibility study, see the Company's news release dated February 22, 2017. The feasibility study was filed on SEDAR+ on April 7, 2017.

The Company also reported results from a positive preliminary economic assessment (" **PEA**") completed on its Çamyurt Gold Project, located approximately 4 km from Ağı Dağı. For complete details of the Çamyurt PEA, see the Company's news release dated February 22, 2017. The PEA was included within the Ağı Dağı feasibility study filed on SEDAR+ on April 7, 2017.

On October 14, 2019, the Company suspended all construction activities on its Kirazlı Project pending the renewal of its Turkish mining concessions, which expired on October 13, 2019. Although the mining concessions have not been revoked and

can be renewed following this expiration date, no further construction activities can be completed until the concessions have been renewed.

In its effort to secure the renewal of its mining licenses, the Company has attempted to work cooperatively with the Turkish government, has raised with the Turkish government its obligations under the Netherlands-Türkiye Bilateral Investment Treaty (the " **BIT**"), has sought to resolve the dispute by good faith negotiations, and has made considerable effort to build support among stakeholders and host communities. The Turkish government has failed to provide the Company with a reason for the non-renewal or a timeline for the renewal of its licenses.

On April 20, 2021, the Company announced that its wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A. and Alamos Gold Holdings B.V., which directly own and control the Company's Turkish assets, would file a BIT claim against the Republic of Türkiye for expropriation and unfair and inequitable treatment, among other things, with respect to their Turkish gold mining projects. The BIT Claim was registered with the International Centre for Settlement of Investment Disputes (World Bank Group) on June 7, 2021.

As a result, the Company incurred an after-tax impairment charge of $213.8 million in the second quarter of 2021. The non-cash impairment charge reflects the Company's entire net carrying value of the Turkish mineral property, plant and equipment, and certain other current assets. Going forward, the Company expects holding costs will be approximately $1.0 to $2.0 million per year while the BIT Claim is ongoing. The arbitral tribunal is scheduled to hear the BIT Claim in October 2024; however this date may be subject to change for reasons beyond the Company's control.

DECEMBER 31, 2023 MINERAL RESERVES AND MINERAL RESOURCES

At December 31, 2023, Alamos' total Proven and Probable gold Mineral Reserves were 10.7 million ounces of gold, a 2% increase from 10.5 million ounces of gold in 2022. Mining depletion at the operating mines was offset by additions, through exploration at those same operations. The Company's Mineral Reserve and Mineral Resource estimates have been estimated as at December 31, 2023, in accordance with definitions adopted by CIM and incorporated into NI 43-101. Readers should refer to the note to investors concerning Mineral Reserve and Resource Estimates on page 6 of this AIF and the risk factors beginning on page 14 of this AIF .

The Company's normal data verification procedures have been employed in connection with the calculations contained herein. Sampling, analytical, and test data underlying the stated Mineral Resources and Mineral Reserves have been verified by employees of Alamos under the supervision of qualified persons, and/or independent qualified persons. Verification procedures include industry-standard quality control practices. For details of data verification and quality control practices at each material property, please see "Mineral Properties". Although the Company has carefully prepared and verified the Mineral Reserve figures presented below and elsewhere in this AIF, such figures are estimates, which are, in part, based on forward-looking information and certain assumptions, and no assurance can be given that the indicated level of mineral will be produced. Estimated Mineral Reserves may have to be recalculated based on actual production experience. Market price fluctuations of gold, as well as increased production costs or reduced recovery rates and other factors, may render the present Proven and Probable Mineral Reserves unprofitable to develop at a particular site or sites. See "Risk Factors" and "Forward-Looking Information" for additional details concerning factors and risks that could cause actual results to differ from those set out below.

The following tables set forth the estimated Mineral Reserves and Mineral Resources attributable to interests held by Alamos for each of its material and non-material properties as at December 31, 2023:

PROVEN AND PROBABLE GOLD MINERAL RESERVES (as at December 31, 2023)

Notes to Mineral Reserve and Mineral Resource estimates:

- The Company's Mineral Reserves and Mineral Resources as at December 31, 2023 are classified in accordance with the Canadian Institute of Mining Metallurgy and Petroleum's "CIM Standards on Mineral Resources and Reserves, Definition and Guidelines" as per Canadian Securities Administrator's NI 43-101 requirements.
- Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability.
- Mineral Resources are exclusive of Mineral Reserves.
- Mineral Reserve cut-off grade for the La Yaqui Pit, the Kirazlı Pit and the Ağı Dağı Pit are determined as a net of process value of $0.10 per tonne for each model block.
- All Measured, Indicated and Inferred open pit Mineral Resources are pit constrained.
- With the exceptions noted following, Mineral Reserve estimates assumed a gold price of $1,400 per ounce and Mineral Resource estimates assumed a gold price of $1,600 per ounce.
- Mineral Reserve estimates for MacLellan assumed a gold price of $1,600 per ounce. Mineral Reserve Estimates for Gordon assumed a gold price of $1,250 per ounce.
- Mineral Reserve estimates for development properties, Türkiye, Quartz Mountain and Carricito assumed a gold of $1,250 per ounce and Mineral Resource estimates assumed a gold price of $1,400 per ounce.
- Metal prices, cut-off grades and metallurgical recoveries are set out in the table below.

	Mineral Resources		Mineral Reserves		
	Gold Price	Cut-off	Gold Price	Cut-off	Met Recovery
Mulatos:					
Mulatos Main Open Pit	$1,600	0.5	n/a	n/a	n/a
PDA Underground	$1,600	2.5	$1,400	3.0	85%
La Yaqui Grande	$1,600	0.3	$1,400	see notes	75%
Carricito	$1,400	0.3	n/a	n/a	n/a

Total Alamos	**10,455**	**728**	**961**	**10,688**

Qualified Person(s) Disclosure

The following tables set forth the Qualified Persons who supervised the preparation of Alamos' December 31, 2023, Mineral Reserve and Mineral Resource estimate. All are recognized as Qualified Persons according to the requirements of NI 43-101.

Mineral Resources QP	Company	Project
Jeffrey Volk, CPG, FAusIMM	Director - Reserves and Resource, Alamos Gold Inc.	Young-Davidson, Lynn Lake, Golden Arrow
Tyler Poulin, P.Geo	Chief Production Geologist - Island Gold, Alamos Gold Inc.	Island Gold
Marc Jutras, P.Eng	Principal, Ginto Consulting Inc.	Mulatos Pits, PDA, La Yaqui Grande, Carricito, Ağı Dağı, Kirazli, Çamyurt, Quartz Mountain
Mineral Reserves QP	**Company**	**Project**
Chris Bostwick, FAusIMM	SVP Technical Services, Alamos Gold Inc.	Young-Davidson, Lynn Lake, PDA
Nathan Bourgeault, P.Eng	Chief Mine Engineer - Island Gold, Alamos Gold Inc.	Island Gold
Herb Welhener, SME-QP	VP, Independent Mining Consultants Inc.	La Yaqui Grande, Ağı Dağı, Kirazli

The scientific and technical information in this AIF has been reviewed and approved by Chris Bostwick, FAusIMM, Senior Vice President, Technical Services for Alamos. Mr. Bostwick is a Qualified Person within the meaning of NI 43-101.

Global exploration programs are overseen by Scott R.G. Parsons, M.Sc., MBA, P.Geo., FAusIMM, Vice President, Exploration for Alamos. Mr. Scott R.G. Parsons is a Qualified Person within the meaning of NI 43-101.

Uses of Gold

The two principal uses of gold are bullion investment and product fabrication. Within the fabrication category, there are a wide variety of end uses, the largest of which is the manufacture of jewelry. Other fabrication purposes include official coins, electronics, dentistry, medallions and other industrial and decorative uses.

Sales and Refining

Gold can be readily sold in numerous markets throughout the world, and its market price can be readily ascertained at any time. Because there are a large number of available gold purchasers, the Company is not dependent upon the sale of gold to any one customer.

The Company's gold production is currently refined to market delivery standards by third-party refineries. The Company believes that, because of the availability of alternate refiners, the inability of the Company's refiners to process the Company's product would not have a material adverse effect on the Company.

Employees

As of December 31, 2023, the Company had 57 full-time employees reporting to its Toronto corporate head office. Each of these corporate head office employees is employed under a contract for services directly with the Company.

At the Company's Young-Davidson Mine, which is based in Matachewan, Ontario, there are 734 full-time employees and 86 contractors as at December 31, 2023.

In addition, the Company's Island Gold Mine, which is based in Dubreuilville, Ontario, there are 528 full-time employees and 464 contractors as at December 31, 2023.

In addition, the Company's Mulatos Mine, which is located in the Sierra Madre Occidental mountain range in the east-central portion of the State of Sonora, Mexico and has administrative offices in Hermosillo, Mexico, as of December 31, 2023, had 519 full-time employees and 860 contractors. The Company has sourced most of its labour pool, including skilled mining personnel, from the state of Sonora in Mexico.

In addition, the Company has 7 full-time administrative, engineering, and exploration personnel in Türkiye and 1 full-time personnel at the Quartz Mountain Property in Oregon, US.

As at December 31, 2023, the Company had 22 full-time employees at the Lynn Lake Gold Project in Manitoba. There is 1 contract employee at site providing geology, logging and support services, and a varying number of additional contractors.

The Company is committed to providing and maintaining a safe and healthy working environment at all of its operations and development projects. The Company has designed practices and policies at each location to ensure a safe and healthy work environment. The Company has invested heavily in this area, and the primary goal is to achieve zero accidents in the workplace.

The nature of the Company's business requires specialized skills and knowledge. The Company operates large mining operations in Canada and Mexico which require technical expertise in the areas of geology, engineering, mine planning, metallurgical processing, mine operations, and environmental compliance. Despite generally good labour relations, competition for skilled workers in the resource sector results in employee turnover at the Company's operations and a need to constantly recruit and train new employees. This competition for qualified employees occasionally results in workforce shortages, which can often be supplemented with more costly contract labour.

DIVIDENDS

In the year ended December 31, 2023, Alamos declared dividends totaling $39.4 million, of which $35.3 million were paid in cash. The Company does not have a formal dividend policy.

Dividends	Year ended Dec 31, 2023[1]	Year ended Dec 31, 2022[1]	Year ended Dec 31, 2021[1]
Declared	39,400,000	39,200,000	$39,100,000
Paid	35,300,000	35,100,000	$34,500,000
Weighted Average number of common shares outstanding	395,509,000	392,172,900	391,889,000
Dividend per share	$0.10	$0.10	$0.10

[1]The difference in the declared and paid dividends in the years ended December 31, 2023, 2022 and 2021 is due to the Company's DRIP (defined below) and shareholder's participation in it.

During the year ended December 31, 2023, the Company did not repurchase common shares under the NCIB.

The Company announced its implementation of a dividend reinvestment and share purchase plan (" **DRIP**") on March 3, 2020. This gives shareholders the option of increasing their investment in Alamos, at a discount to the prevailing market price and without incurring any transaction costs, by electing to receive common shares in place of cash dividends. The Company has the discretion to elect to issue such common shares at up to a 5% discount to the prevailing market price from treasury or purchase the common shares on the open market, including the facilities of the New York Stock Exchange and will advise as such with each dividend declaration. Enrollment in the DRIP is optional. On November 24, 2020, the Company suspended Optional Cash Purchases (as defined in the DRIP). Further information on the DRIP, including the forms needed to enroll, are available on the Company's website at http://www.alamosgold.com/investors/Dividend-Reinvestment-Plan.

DESCRIPTION OF CAPITAL STRUCTURE

Common Shares

The Company's authorized capital consists of one class of Class A common shares without par value (the " **common shares**"). The Company is authorized to issue an unlimited number of common shares. Each common share is entitled to one vote. As at December 31, 2023, a total of 396,956,984 common shares were issued and outstanding and as at March 25, 2024 a total of 396,904,624 common shares were issued and outstanding.

All of the Company's common shares are of the same class and rank equally as to voting rights, dividends and participation in assets of the Company on wind-up or dissolution. There are no pre-emptive rights or conversion rights, and no provisions for redemption or purchase for cancellation, surrender, or sinking or purchase funds; however, the Company's articles provide that the Company may if authorized by a resolution of the directors, purchase or otherwise acquire any of its shares at the price and upon the terms specified in such resolution and subject to the OBCA. Provisions as to creation, modification, amendment, or variation of such rights or such provisions are contained in the OBCA.

On May 31, 2023, the Company announced that it has filed a Base Shelf Prospectus dated May 31, 2023 with the Ontario Securities Commission, relying on the well-known seasoned issuer exemption, and a corresponding shelf registration statement with the SEC on Form F-10 (the "**Registration Statement**"). The Base Shelf Prospectus qualifies the issuance of up to US$500,000,000 (or the equivalent in other currencies) of Class A common shares, debt securities, warrants and subscription receipts (collectively, the "**Securities**") of the Company, or any combination thereof, in all of the provinces and territories of Canada, and the Registration Statement registers the Securities for offers and sales in the United States using the multijurisdictional disclosure system. The Base Shelf Prospectus is effective for a period of 25 months. The Registration Statement, was declared effective by the SEC and will be effective for the remaining duration of the Base Shelf Prospectus.

The Company has filed the Base Shelf Prospectus and Registration Statement to maintain financial flexibility but has no present intentions to undertake an offering of securities under the Base Shelf Prospectus. There is no certainty any Securities will be offered or sold under the Base Shelf Prospectus and/or Registration Statement within the 25-month effective period. Should the Company decide to offer securities during the 25-month effective period, the specific terms, including the use of proceeds, will be set forth in a prospectus supplement to the Base Shelf Prospectus and Registration Statement.

MARKET FOR SECURITIES

The Company's common shares are listed on the TSX and NYSE under the ticker symbol "AGI".

Alamos Gold Inc. - Trading Price and Volume

The following table sets out the monthly low and high trading prices and the monthly volume of trading of the common shares of the Company on the TSX for January 1, 2023, to December 31, 2023:

2023	Low (CAD$)	High (CAD$)	Volume
January	$13.96	$15.55	20,435,900

[1]The information as to province or state of residence and principal occupation, has been furnished by the respective directors and executive officers individually.
[2]Member of Audit Committee. Ms. Kennedy is the chair of this Committee.
[3]Member of Human Resources Committee. Ms. Mercier is the chair of this Committee.
[4]Member of Corporate Governance and Nominating Committee. Mr. Fleck is the chair of this Committee.
[5]Member of the Technical and Sustainability Committee. Mr. Gower is the chair of this Committee.
[6]Member of the Public Affairs Committee. Mr. Prichard is the chair of this Committee.

The term of office of each of the current directors expires at the next annual general meeting of shareholders of the Company.

As at the date of this AIF, the Company's directors and executive officers, as a group, beneficially own, directly or indirectly, or exercise control or direction over a total of 1,528,054 common shares, directly or indirectly, representing approximately 0.38% of the issued and outstanding common shares of the Company.

Cease Trade Orders, Bankruptcies and Penalties and Sanctions

Except as described below, no proposed director of the Company is, as at the date of this AIF or was within 10 years before the date of this AIF, a director, chief executive officer or chief financial officer of any company (including the Company), that: (i)

was subject to a cease trade order, an order similar to a cease trade order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days, that was issued while the proposed director was acting in the capacity as director, chief executive officer or chief financial officer; or (ii) was subject to a cease trade order, an order similar to a cease trade order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days, that was issued after the proposed director ceased to be a director, chief executive officer or chief financial officer and which resulted from an event that occurred while that person was acting in the capacity as director, chief executive officer or chief financial officer.

Except as described below, no proposed director of the Company; (i) is, as at the date of this AIF, or has been within the 10 years before the date of this AIF, a director or executive officer of any company (including the Company) that, while that person was acting in that capacity, or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets; or (ii) has, within the 10 years before the date of this AIF, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of the proposed director.

On February 28, 2020, a receiver was appointed over the assets, undertakings, and properties of Kew Media Group Inc. David Fleck resigned from the board of directors of Kew Media Group Inc. in late February 2020.

No proposed director of the Company has been subject to (i) any penalties or sanctions imposed by a court relating to securities legislation or by a securities regulatory authority or has entered into a settlement agreement with a securities regulatory authority; or (ii) any other penalties or sanctions imposed by a court or regulatory body that would likely be considered important to a reasonable security holder in deciding whether to vote for a proposed director.

Conflicts of Interest

Certain directors and officers of the Company are also directors, officers, or shareholders of other companies that are similarly engaged in the business of acquiring, developing, and exploiting natural resource properties. The directors and officers of the Company are also directors of other companies that are similarly engaged in the business of acquiring, developing, and exploiting natural resource properties. These associations with other public companies in the resource sector may give rise to conflicts of interest from time to time. The directors and officers of the Company are required by law to act honestly and in good faith with a view to the best interests of the Company and to disclose any interest that they may have in a contract or transaction if the contract or transaction is material to the Company, the Company has entered, or proposes to enter, into the contract or transaction, and either the director or officer has a material interest in the contract or transaction or the director or officer is a director or officer of, or has a material interest in, a corporation that has a material interest in the contract or transaction. If a conflict of interest arises at a meeting of the board of directors, any director in a conflict is required to disclose his or her interest and abstain from voting on such matter. In determining whether the Company will participate in any project or opportunity, the directors will primarily consider the degree of risk to which the Company may be exposed and its financial position at the time.

AUDIT COMMITTEE

Pursuant to the provisions of section 158(1) of the *Business Corporations Act* (Ontario), the Company is required to have an Audit Committee. The Company must also, pursuant to the provisions of National Instrument 52-110 - *Audit Committees* ("**NI 52-110**"), have a written charter that sets out the duties and responsibilities of its audit committee. The Company's audit committee charter is attached hereto as Schedule "A".

Composition of the Audit Committee

The Audit Committee is comprised of Claire Kennedy (Chair), Paul Murphy, David Fleck, and Elaine Ellingham. Each member is financially literate, and all members of the Audit Committee are independent directors.

Relevant Education and Experience

- Ms. Claire Kennedy is a lawyer and Senior Advisor, Clients and Industries at Bennett Jones LLP, Lead Director of the Bank of Canada and Chair of Neo Performance Materials Inc. and holds a Bachelor of Applied Science degree in chemical engineering from the University of Toronto, a law degree from Queen's University, and has completed the University of Chicago's Booth School of Business Advanced Management Program.

- Mr. Paul Murphy is formerly a Partner and National Mining Leader of PricewaterhouseCoopers LLP, the Chief Financial Officer of GPM Metals Inc., Chief Financial Officer and Executive Vice-President, Finance, Guyana Goldfields Inc. and Chief Financial Officer of G2 Goldfields Inc. and holds a Bachelor of Commerce degree from Queen's University, Chartered Accountant (now known as a Chartered Professional Accountant) designation and has been recognized as a Fellow of the Institute of Chartered Professional Accountants.
- Mr. David Fleck has more than 30 years of capital markets experience, including as former President and Chief Executive Officer of Macquarie Capital Markets Canada, and holds a B.A. in Economics from the University of Western Ontario and an MBA from INSEAD School of Business.
- Ms. Elaine Ellingham has over 25 years of financial and management experience, including serving as an audit committee member for several companies and completing financial due diligence while employed at TSX. Ms. Ellingham is currently the Chair of the Audit Committee of Almaden Minerals Ltd.

Each member has a significant understanding of the mineral exploration and mining business in which the Company is engaged in and has an appreciation for the relevant accounting principles for this business. Ms. Kennedy and Mr. Fleck have been certified by and are members of the Institute of Corporate Directors.

Reliance on Certain Exemptions

At no time since the commencement of the Company's most recently completed financial year has the Company relied on the exemptions in section 2.4 (De Minimis Non-audit Services), section 3.2 (Initial Public Offerings), section 3.4 (Events Outside Control of Member), section 3.5 (Death, Disability or Resignation of Audit Committee Member) or Part 8 (Exemptions) of NI 52-110.

Reliance on the Exemption in Subsection 3.3(2) or Section 3.6

At no time since the commencement of the Company's most recently completed financial year has the Company relied on the exemption in subsection 3.3(2) (Controlled Companies) or section 3.6 (Temporary Exemption for Limited and Exceptional Circumstances) of NI 52-110.

Reliance on Section 3.8

At no time since the commencement of the Company's most recently completed financial year has the Company relied on section 3.8 (Acquisition of Financial Literacy) of NI 52-110.

Audit Committee Oversight

At no time since the commencement of the Company's most recently completed financial year was a recommendation of the Audit Committee to nominate or compensate an external auditor not adopted by the Board of Directors.

Pre-approval Policies and Procedures

The Audit Committee shall pre-approve all audit and non-audit services provided by the independent auditors and not engage the independent auditors to perform the specific non-audit services prohibited by law or regulation.

External Auditor Service Fees (By Category)

Fiscal Year-End[1]	Audit Fees[2]	Audit Related Fees[3]	Tax Fees[4]	All Other Fees[5]
2022	$1,241,635	$32,076	$65,176	$Nil
2023	$1,151,378	$35,202	$44,917	$Nil

(1) All fees are in USD.
(2) Fees charged for the annual financial statement audit and quarterly reviews.
(3) Fees charged for assurance and related services reasonably related to the performance of an audit, and not included under "Audit Fees".
(4) Fees charged for tax compliance, tax advice, and tax planning services.
(5) Fees for services other than disclosed in any other column.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as set forth herein and other than transactions carried out in the ordinary course of business of the Company or any of its subsidiaries, none of the directors or executive officers of the Company, any shareholder directly or indirectly beneficially owning or exercising control or direction over, shares carrying more than 10% of the voting rights attached to the shares of the Company, nor an associate or affiliate of any of the foregoing persons has since January 1, 2021 (being the commencement of the Company's third most recently completed financial year) any material interest, direct or indirect, in any transactions that materially affected or would materially affect the Company or any of its subsidiaries.

TRANSFER AGENT AND REGISTRAR

The Company's registrar and transfer agent, Computershare Trust Company of Canada, is located at 100 University Avenue, 8th Floor, Toronto, Ontario M5J 2Y1.

LEGAL PROCEEDINGS

On April 20, 2021, the Company announced that its Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V., which directly own and control the Company's Turkish assets, would file a bilateral investment treaty claim against the Republic of Türkiye for expropriation and unfair and inequitable treatment, among other things, with respect to their Turkish gold mining projects. The claim/request for arbitration was registered with the International Centre for Settlement of Investment Disputes (World Bank Group) on June 7, 2021.

There are no other material legal proceedings to which the Company is a party.

MATERIAL CONTRACTS

Except as otherwise set out in this Annual Information Form, the following are the only material contracts of the Company, other than contracts entered into in the ordinary course of business not otherwise required to be disclosed, that we have entered into within the most recently completed fiscal year or before the most recently completed fiscal year but still in effect.

On June 17, 2021, the Company entered into a construction contract with Redpath Canada Limited (" **Redpath**") pursuant to which Redpath will perform construction and development for shaft sinking and headworks with respect to the Company's P3+ Expansion Project at Island Gold. The value of the contract is approximately CAD $76 million, which amount may be subject to increase due to a variety of factors, including but not limited to equipment supply costs and additional required labour.

On November 6, 2020, the Company entered into a mining services agreement with Grupo Desarrollo Infraestructura, S.A. de C.V. (" **GDI**"), which shall remain in force for a period of 7 years after its signature, pursuant to which GDI will perform essentially all of the open-pit mining operations at the "La Yaqui Grande" Project, Mulatos Mine.

INTERESTS OF EXPERTS

KPMG LLP are the auditors of the Company and have confirmed that they are independent within the meaning of the relevant rules and related interpretations prescribed by the relevant professional bodies in Canada and any applicable legislation or regulations and also that they are independent accountants with respect to the Company under all relevant US professional and regulatory standards.

The individuals who are qualified persons for the purposes of NI 43-101 are listed under the section of this AIF entitled "Qualified Person(s) Disclosure". As a group, they beneficially own, directly or indirectly, less than 1% of any class of the outstanding securities of the Company and our associates and affiliates.

ADDITIONAL INFORMATION

Additional information relating to the Company is available under the Company's profile on the SEDAR+ website at www.sedarplus.ca. Financial information relating to the Company is provided in the Company's comparative consolidated financial statements and management's discussion and analysis for the most recent fiscal year.

Additional information, including director and officer remuneration and indebtedness, principal holders of the Company's securities and securities authorized for issuance under equity compensation plans, if applicable, is contained in the Company's most recent information circular available on SEDAR+.

SCHEDULE "A"
ALAMOS GOLD INC.

AUDIT COMMITTEE CHARTER

Audit Committee Charter

This charter governs the operations of the Audit Committee (the "Committee") of Alamos Gold Inc. (the "Company"). The purpose, composition, responsibilities, and authority of the Committee are set out in this Charter.

This Charter and the Articles of the Company and such other procedures, not inconsistent therewith, as the Committee may adopt from time to time, shall govern the meetings and procedures of the Committee.

1. Purpose

The Committee shall provide assistance to the Board of Directors of the Company (the "Board") in fulfilling their oversight responsibility to the shareholders, potential shareholders, the investment community, and others relating to:

(a) the integrity of the Company's financial statements;

(b) the financial reporting process;

(c) the systems of internal accounting and financial controls;

(d) financial risk management;

(e) the performance of the Company's internal audit function (if applicable) and independent auditors;

(f) the independent auditors' qualifications and independence;

(g) the Company's compliance with ethics policies and legal and regulatory requirements; and

(h) the system of cyber security controls.

2. Composition

The Committee shall be composed of at least three (3) directors of the Company (the "Members"), each of whom is "independent" as defined by applicable Canadian and US laws and regulations as well as the rules of relevant stock exchanges, all as set out in the Company's Director Independence Policy.

All Members shall be "financially literate" as defined in National Instrument 52-110 Audit Committees or any successor policy, meaning that the director has the ability to read and understand a set of financial statements that present the breadth and level of complexity of accounting issues that can reasonably be expected to be raised by the Company's financial statements.

At least one member of the Committee shall be a 'financial expert' within the meaning of Applicable Laws. The financial expert should have the following competencies:

- An understanding of financial statements and accounting principles used by the Company to prepare its financial statements;
- The ability to assess the general application of such accounting principles in connection with the accounting for estimates, accruals and reserves;
- Experience preparing, auditing, analyzing or evaluating financial statements that present a breadth and level of complexity comparable to the Company's financial statements, or experience actively supervising one or more persons engaged in such activities;
- An understanding of internal controls and procedures for financial reporting; and
- An understanding of audit committee functions.

Members shall be appointed by the Board and shall serve until they resign, cease to be a director, or are removed or replaced by the Board.

3. Authority

The Committee is authorized to carry out its responsibilities as set out in this Charter, and to make recommendations to the Board arising therefrom.

In discharging its oversight role, the Committee is empowered to investigate any matter brought to its attention with full access to all books, records, facilities, and personnel of the Company and the authority to engage, and to set and pay the compensation of, independent accountants, legal counsel and other advisers as it determines necessary to carry out its duties.

The Committee may also communicate directly with the auditors, legal and other advisors, management and employees of the Company to carry out its responsibilities and duties set out in this Charter.

The Company shall pay directly or reimburse the Committee for the expenses incurred by the Committee in carrying out its responsibilities.

4. Responsibilities

The primary responsibility of the Committee is to oversee the Company's financial reporting process on behalf of the Board and report the results of their activities to the Board. While the Committee has the responsibilities and powers set forth in this Charter, it is not the duty of the Committee to plan or conduct audits or to determine that the Company's financial statements are complete and accurate and are in accordance with generally accepted accounting principles. Management is responsible for the preparation, presentation, and integrity of the Company's financial statements and for the appropriateness of the accounting principles and reporting policies that are used by the Company. The independent auditors are responsible for auditing the Company's financial statements and for reviewing the Company's unaudited interim financial statements.

The Committee, in carrying out its responsibilities, believes its policies and procedures should remain flexible, in order to best react to changing conditions and circumstances. The Committee should take appropriate actions to set the overall corporate "tone" for quality financial reporting, sound business risk practices, and ethical behaviour. The following shall be the principal direct responsibilities of the Committee:

(a) Appointment and termination (subject, if applicable, to shareholder ratification), compensation, and oversight of the work of the independent auditors, including resolution of disagreements between management and the auditors regarding financial reporting. The Committee shall arrange for the independent auditors to report directly to the Committee.

(b) Pre-approve all audit and non-audit services provided by the independent auditors and not engage the independent auditors to perform the specific non-audit services prohibited by law or regulation. The Committee may delegate pre-approval authority to a member of the Committee. The decisions of any Committee member to whom pre-approval authority is delegated must be presented to the full Committee at its next scheduled meeting.

(c) At least annually, obtain and review a report by the independent auditors describing:

(i) The firm's internal control procedures.

(ii) Any material issues raised by the most recent internal control review, or peer review, of the firm, or by any inquiry or investigation by governmental or professional authorities, within the preceding five years, respecting one or more independent audits carried out by the firm, and any steps taken to deal with any such issues.

(iii) All relationships between the independent auditor and the Company (to assess the auditor's independence).

(d) Establish clear hiring policies for employees, partners, former employees and former partners of the current and former independent auditors of the Company that meet the requirements of applicable securities laws and stock exchange rules.

(e) Discuss with the auditors, the overall scope and plans for audits of the Company's financial statements, including the adequacy of staffing and compensation. Ensure there is rotation of the audit partner having primary responsibility for the independent audit of the Company at such intervals as may be required.

(f) Discuss with management and the auditors the adequacy and effectiveness of the accounting and financial controls, including the Company's policies and procedures to assess, monitor, and manage business risk, and legal and ethical compliance programs (e.g. Company's Code of Business Conduct and Ethics).

(g) Periodically meet separately with management and the auditors to discuss issues and concerns warranting Committee attention. The Committee shall provide sufficient opportunity for the auditors to meet privately with the members of the Committee, which shall at minimum include an in camera meeting following each quarterly meeting. The Committee shall review with the auditor any audit problems or difficulties and management's response.

The processes set forth represent a guide with the understanding that the Committee may supplement them as appropriate.

5. Chair Responsibilities

The Chair of the Committee shall provide leadership to the Committee to enhance the Committee's effectiveness and ensure adherence to this Charter and, in relevant part, to the Code of Business Conduct and Ethics:

(a) Convene and preside over Committee meetings and ensure they are conducted in an efficient, effective and focused manner that promotes meaningful discussion;

(b) Assist management with the preparation of an agenda and ensure that meeting materials are prepared and disseminated in a timely manner and is appropriate in terms of relevance, efficient format and detail; and

(c) Adopting procedures to ensure that the Committee can conduct its work effectively and efficiently, including committee structure and composition and management of meetings;

(d) Ensure that the Committee has sufficient time and information to make informed decisions; and

(e) Provide leadership to the Committee and management with respect to matters covered by this mandate.

(f) Review any related party transaction or arrangement involving Alamos and any financial reporting thereof, and give or withhold permission (as appropriate), to give full effect to the Conflicts of Interest and Corporate Opportunities section of the Code of Business Conduct and Ethics.

The Committee shall designate one of its Members as chair of the Committee (the "Chair").

The Corporate Secretary of the Company, or the individual designated as fulfilling the function of Secretary of the Company, will be the secretary of all meetings and will maintain minutes of all meetings and deliberations of the Committee. In the absence of the Corporate Secretary at any meeting, the Committee will appoint another person who may, but need not, be a Member to be the secretary of that meeting.

6. Specifically Delegated Duties

For purposes of this Charter, specific accounting, financial and treasury related duties delegated to the Committee by the Company's Board of Directors include:

Accounting and Financial

(a) Receive regular reports from the independent auditor on the critical policies and practices of the Company, and all alternative treatments of financial information within generally accepted accounting principles that have been discussed with management.

(b) Where applicable, review management's assertion on its assessment of the effectiveness of internal controls as of the end of the most recent fiscal year and the independent auditor's report on management's assertion.

(c) Review and discuss annual and interim earnings press releases before the Company publicly discloses this information.

(d) Review and approve the interim quarterly unaudited financial statements and disclosures under Management's Discussion and Analysis of Financial Condition and Results of Operations with management and, where applicable, the independent auditors prior to the filing of the Company's Quarterly Report or their inclusion in any filing with regulatory authorities. Also, the Committee shall discuss the results of the quarterly review, if any, and any other matters required to be communicated to the Committee by the independent auditors under generally accepted auditing standards.

(e) Review with management and the independent auditors the financial statements and disclosures under Management's Discussion and Analysis of Financial Condition and Results of Operations to be included in the Company's Annual Report to shareholders and any other filing with regulatory authorities, including their judgment

about the quality, not just the acceptability of accounting principles, the reasonableness of significant judgments, and the clarity of the disclosures in the financial statements.

(f) The Committee shall discuss any matters required to be communicated to the Committee by the independent auditors under generally accepted auditing standards and shall specifically review with the independent auditors, upon completion of their audit:

(i) the contents of their report;

(ii) the scope and quality of the audit work performed;

(iii) the adequacy of the Company's financial and auditing personnel;

(iv) co-operation received from the Company's personnel during the audit;

(v) significant transactions outside of the normal business of the Company; and

(vi) significant proposed adjustments and recommendations for improving internal accounting controls, accounting principles or management systems.

(g) Establish procedures for the review of the public disclosure of financial information extracted from the financial statements of the Company.

(h) Establish procedures for the receipt, retention, and treatment of complaints received by the Company regarding accounting, internal accounting controls, or auditing matters, and the confidential, anonymous submission by employees of the Company of concerns regarding questionable accounting or auditing matters.

Treasury Related

(a) Monitor and review risk management strategies as they pertain to the Company's general insurance programs, and foreign exchange and commodity hedging programs, and make recommendations to the Board with respect to such strategies.

(b) Approve investment policies and appoint investment managers, where appropriate, for the Company's retirement and other funded benefit plans.

(c) Perform such other duties in respect of financial matters as, in the opinion of the Board, should be performed by the Committee.

7. Meetings and Proceedings

The Committee shall meet as frequently as required, but not less than four times each year. Any Member or the independent auditors of the Company may call a meeting of the Committee.

The agenda of each meeting of the Committee will include input from the independent auditors, directors, officers and employees of the Company as appropriate. Meetings will include presentations by management, or professional advisers and consultants when appropriate, and will allow sufficient time to permit a full and open discussion of agenda items.

Forty-eight (48) hours advance notice of each meeting will be given to each Member verbally, by telephone or email, unless all Members are present and waive notice, or if those absent waive notice before or after a meeting. Members may attend all meetings either in person, virtually or by conference call. Any Member may call a meeting of the Committee.

The independent auditors of the Company are entitled to attend and be heard at meetings of the Committee where there is approval of the financial statements and disclosures under Management's Discussion and Analysis of Financial Condition and Results of Operations to be included in the Company's Annual Report to shareholders and any other filing with regulatory authorities. For certainty, the independent auditors of the Company may still be requested by the Committee to attend other meetings of the Committee, from time to time.

The quorum for each meeting of the Committee is a majority of the Members. The Chair of the Committee shall chair each meeting. In the absence of the Chair, the other Members may appoint one of their number as chair of a meeting. The chair of a meeting shall not have a second or casting vote.

The Chair of the Committee or his delegate shall report to the Board following each meeting of the Committee.

The Secretary or his delegate shall keep minutes of all meetings of the Committee, including all resolutions passed by the Committee. Minutes of meetings shall be distributed to the Members and the other directors of the Company after preliminary approval thereof by the Chair of the Committee.

The Committee shall meet regularly, at a minimum quarterly, alone to facilitate full communication.

8. Self-Assessment

The Committee and the Board shall annually assess the effectiveness of the Committee with a view to ensuring that the performance of the Committee accords with best practices.

The Committee shall review and reassess this Charter at least annually and obtain the approval of the Company's Board for any changes.

This Management's Discussion and Analysis ("MD&A"), dated February 21, 2024, relates to the financial condition and results of the consolidated operations of Alamos Gold Inc. ("Alamos" or the "Company"), and should be read in conjunction with the Company's consolidated financial statements for the years ended December 31, 2023 and December 31, 2022 and notes thereto. The financial statements have been prepared in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board ("IFRS" or "GAAP"). All results are presented in United States dollars ("US dollars" or "$"), unless otherwise stated. References to CAD $ represents Canadian dollars.

Statements are subject to the risks and uncertainties identified in the Cautionary Note Regarding Forward-Looking Statements section of this document. United States investors are also advised to refer to the section entitled Cautionary Note to United States Investors on page 51.

Overview of the Business

Alamos is a Canadian-based intermediate gold producer with diversified North American production from the Young-Davidson and Island Gold mines in Northern Ontario, Canada and the Mulatos District in Sonora State, Mexico. In addition, Alamos has a strong portfolio of growth projects, including the Phase 3+ Expansion at Island Gold, and the Lynn Lake project in Manitoba, Canada. Alamos employs more than 1,900 people and is committed to the highest standards of sustainable development and ethical business practices.

The Company's common shares are listed on the Toronto Stock Exchange (TSX: AGI) and the New York Stock Exchange (NYSE: AGI). Further information about Alamos can be found in the Company's regulatory filings, including the Company's Annual Information Form, available on SEDAR+ at www.sedarplus.ca, on EDGAR at www.sec.gov, and on the Company's website at www.alamosgold.com.

Capital expenditures (sustaining, growth, and capitalized exploration) (in millions) [2]				
Young-Davidson [4]	$24.0	$20.6	$67.2	$71.5
Island Gold [5]	$73.9	$53.9	$233.1	$157.3
Mulatos District [6]	$8.4	$5.5	$30.4	$62.7
Other	$3.4	$4.8	$18.2	$22.2

[1] Cost of sales includes mining and processing costs, royalties, and amortization expense.

[2] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.

[3] For the purposes of calculating mine-site all-in sustaining costs, the Company does not include an allocation of corporate and administrative and share based compensation expenses.

[4] Includes capitalized exploration at Young-Davidson of $1.3 million and $5.1 million for the three months and year ended December 31, 2023, respectively ($1.5 million and $5.0 million for the three months and year ended December 31, 2022, respectively).

[5] Includes capitalized exploration at Island Gold of $3.3 million and $11.1 million for the three months and year ended December 31, 2023, respectively ($4.9 million and $18.8 million for the three months and year ended December 31, 2022, respectively).

[6] Includes capitalized exploration at Mulatos District of $5.5 million and $11.8 million for the three months and year ended December 31, 2023, respectively ($1.7 million and $2.8 million for the three months and year ended December 31, 2022, respectively).

[7] The Mulatos District includes both the Mulatos pit, as well as La Yaqui Grande.

Fourth Quarter and Full Year 2023 Highlights

Operational and Financial Highlights

- Produced a record 529,300 ounces of gold in 2023, achieving the top end of increased production guidance and representing a 15% increase from 2022. This included a strong finish to the year from all three operations with fourth quarter production of 129,500 ounces
- The Mulatos District exceeded guidance, producing 212,800 ounces in 2023, a 58% increase from the prior year, reflecting a strong performance from La Yaqui Grande in its first full year of production. The higher margin ounces from La Yaqui Grande drove a significant increase in mine-site free cash flow[1] to $142.1 million, including $27.4 million in the fourth quarter
- Young-Davidson produced 185,100 ounces in 2023, meeting guidance and generating record mine-site free cash flow[1] of $117.6 million. This marked the third consecutive year mine-site free cash flow has exceeded $100 million, demonstrating the strong ongoing performance and consistency of the operation, including $35.0 million in the fourth quarter
- Island Gold produced 131,400 ounces in 2023, meeting guidance and continuing to self fund the majority of $178.1 million of growth capital invested in the Phase 3+ Expansion during the year
- Total cash costs[1] of $850 per ounce, all-in sustaining costs ("AISC"[1]) of $1,160 per ounce, and cost of sales of $1,212 per ounce for the full year were in line with guidance. Fourth quarter total cash costs of $900 per ounce, and AISC of $1,233 per ounce were consistent with quarterly guidance
- Record financial performance with full year gold sales totaling 526,258 ounces at an average realized price of $1,944 per ounce for record revenue of $1.0 billion, a 25% increase from 2022. This included fourth quarter sales of 129,005 ounces at an average realized price of $1,974 per ounce, generating $254.6 million in revenue. The average realized gold price was $3 per ounce above the London PM fix for both the quarter and the year
- Record annual cash flow from operating activities of $472.7 million (including $518.9 million, or $1.31 per share before changes in working capital[1]), a 58% increase from 2022. Fourth quarter cash flow from operating activities was $124.1 million ($120.2 million, or $0.30 per share, before changes in working capital[1])
- Strong free cash flow[1] of $123.8 million in 2023 while funding the Phase 3+ Expansion at Island Gold
- Realized adjusted net earnings[1] of $208.4 million, or $0.53 per share[1] in 2023. Reported net earnings were $210.0 million, or $0.53 per share
- Realized adjusted net earnings[1] for the fourth quarter of $49.2 million, or $0.12 per share[1]. Adjusted net earnings includes adjustments for net unrealized foreign exchange gains recorded within deferred taxes and foreign exchange of $12.6 million, offset by other adjustments, net of taxes totaling $14.7 million. Reported net earnings were $47.1 million, or $0.12 per share
- Cash and cash equivalents increased $95.0 million, or 73%, to $224.8 million at year end, with no debt and $13.0 million in equity securities
- Paid dividends of $39.4 million, or $0.10 per share for the full year

Growth Projects, Mineral Reserves and Resources and Other Highlights

- Issued three-year guidance on January 10, 2024, which included increased production guidance for 2024 of between 485,000 and 525,000 ounces. Production is expected to increase 7% by 2026, with AISC decreasing 11% reflecting low cost production growth from Island Gold with the completion of the Phase 3+ Expansion
- Reported year-end 2023 Mineral Reserves of 10.7 million ounces of gold, a 2% increase from 2022, with grades also increasing 1%. This marked the fifth consecutive year Mineral Reserves have grown for a combined increase of 10% with grades also increasing 9% over that time frame. Additionally, Measured and Indicated Mineral Resources increased 12% to 4.4 million ounces, with grades increasing 9%, and Inferred Mineral Resources increased 3% to 7.3 million ounces, at 1% higher grades
- Advanced construction of the Phase 3+ Expansion with completion of key shaft site infrastructure in 2023 including the headframe and hoist house. Construction remains on schedule with shaft sinking commencing in December and engineering on the mill and paste plant well underway
- Received approval of the updated Closure Plan Amendment from the Ontario Government in December allowing for the start of construction on the larger mill expansion and paste plant as outlined in the Phase 3+ Expansion study
- Achieved a significant permitting milestone for the Lynn Lake project in March with a positive Decision Statement issued by the Department of Environment and Climate Change Canada based on the completed Federal Environmental Impact Statement, and Environment Act Licenses issued by the Province of Manitoba
- Completed an updated Feasibility Study on the Lynn Lake project in August outlining a larger, longer-life, low-cost operation with attractive economics and significant exploration upside. Lynn Lake is expected to produce an average of 176,000 ounces of gold per year at mine-site AISC of $699 per ounce over its initial 10 years
- Completed the acquisition of Manitou Gold in May, adding significant exploration potential across the Michipicoten Greenstone Belt by more than tripling the regional land package adjacent to and along strike from Island Gold
- Publication of Alamos' inaugural Climate Change Report, outlining corporate governance around climate-related risks and opportunities, and issued the 2022 Environmental, Social and Governance ("ESG") Report, outlining the Company's progress on its ESG performance
- Announced the acquisition of Orford Mining in January 2024, through which the Company will consolidate its existing ownership of Orford shares and add the highly prospective Qiqavik Gold Project, located in Quebec, Canada. The Company expects to issue approximately 0.9 million shares for total consideration of approximately $12 million with the transaction expected to close in April 2024

[1] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.

Environment, Social and Governance Summary Performance

Health and Safety

- Total recordable injury frequency rate[1] ("TRIFR") of 1.45 in the fourth quarter, a decrease from 1.84 in the third quarter of 2023
- Lost time injury frequency rate[1] ("LTIFR") of 0.10, an increase from 0.09 in the third quarter of 2023
- Full year TRIFR of 1.50 and LTIFR of 0.07, a reduction of 6% and an increase of 7%, respectively, from 2022
- Mulatos received the Silver Helmet Award from CAMIMEX for the second consecutive year. The Silver Helmet Award recognizes high safety standards & processes in the mining sector in Mexico

During the fourth quarter of 2023, TRIFR decreased with 15 recordable injuries, as compared to 21 in the prior quarter, and one lost time injury, contributing to a significant improvement in annual safety performance.

Alamos strives to maintain a safe, healthy working environment for all, with a strong safety culture where everyone is continually reminded of the importance of keeping themselves and their colleagues healthy and injury-free. The Company's overarching commitment is to have all employees and contractors return *Home Safe Every Day*.

Environment

- Zero significant environmental incidents and zero reportable spills in the fourth quarter and full year
- Updated Closure Plan Amendment received for Island Gold, allowing for construction of the larger mill expansion and paste plant, as outlined in the Phase 3+ Expansion study
- Completed year one of Alamos' Independent Tailings Review Board work
- Alamos' climate change risk assessment was updated to evaluate the effects of material risks and opportunities on the Company's strategy and financial position, using updated climate scenarios and industry practices. This exercise is expected to be completed in the first quarter of 2024 and will incorporate climate risk into Alamos' financial performance, corporate strategy and mitigation plans in line with IFRS S2 and recommendations of the Taskforce on Climate-Related Financial Disclosure ("TCFD")

The Company is committed to preserving the long-term health and viability of the natural environment that surrounds its operations and projects. This includes investing in new initiatives to reduce our environmental footprint with the goal of minimizing the environmental impacts of our activities and offsetting any impacts that cannot be fully mitigated or rehabilitated.

Community

Ongoing donations, medical support and infrastructure investments were provided to local communities, including:

- Various sponsorships to support local youth sports teams and community events, and donations to local charities and organizations around the Company's mines
- Scholarships awarded to local students in Matarachi, and students in Canada as part of the Young Mining Professionals Scholarship Program
- Health campaigns in Matarachi including full body health assessments for several hundred residents, and vaccination campaigns for influenza and COVID
- Ongoing support to our community beekeeping project involving both the Mulatos Mine and participants from Matarachi
- Community clean-up in Mulatos and Matarachi in preparation for the Day of the Dead and Mexican Revolution holidays

The Company believes that excellence in sustainability provides a net benefit to all stakeholders. The Company continues to engage with local communities to understand local challenges and priorities. Ongoing investments in local infrastructure, health care, education, cultural and community programs remain a focus of the Company.

Governance and Disclosure

- Published Alamos' 2022 ESG Report, outlining the Company's progress on its ESG performance in accordance with the Sustainability Accounting Standards Board Metals & Mining Industry Standard, the recommendations of the TCFD, and the Global Reporting Initiative Standards for sustainability reporting "Core" requirements. It focuses on economic, environmental, social and governance topics and indicators that are of the greatest interest to Alamos' stakeholders
- The Mulatos mine was awarded the Empresa Socialmente Responsible award by the Mexican Center for Philanthropy for the 15th consecutive year, and the Ethics and Values in Industry award from CONCAMIN for the fourth consecutive year

The Company maintains the highest standards of corporate governance to ensure that corporate decision-making reflects its values, including the Company's commitment to sustainable development. During the quarter, the Company continued to advance its implementation of the Responsible Gold Mining Principles, developed by the World Gold Council as a framework that sets clear expectations as to what constitutes responsible gold mining.

(1) Frequency rate is calculated as incidents per 200,000 hours worked.

2023 Business Developments

2023 Year-End Mineral Reserve and Resource Update

On February 20, 2024, the Company reported its updated Mineral Reserves and Resources as of December 31, 2023. Highlights include the following:

- **Global Proven and Probable Mineral Reserves increased 2% to 10.7 million ounces of gold** (202 million tonnes ("mt") grading 1.65 grams per tonne of gold ("g/t Au")), with grades increasing 1%, reflecting higher grade additions at Island Gold and Puerto Del Aire ("PDA") and growth at Lynn Lake. Mineral Reserve additions more than replaced depletion at a rate of 132%
    - **Island Gold's Mineral Reserves increased 18% to 1.7 million ounces** (5.2 mt grading 10.30 g/t Au), marking the 11th consecutive year of growth
    - **Puerto Del Aire's ("PDA") Mineral Reserves increased 33% to 1.0 million ounces** (5.4 mt grading 5.61 g/t Au) with a 16% increase in grades
    - **Lynn Lake's Mineral Reserves increased 13% to 2.3 million ounces** (47.6 mt grading 1.52 g/t Au)
- **Island Gold's Mineral Reserves and Resources increased 16% to 6.1 million ounces** driven by significant high-grade additions near existing infrastructure within the main zone and recently defined zones in hanging wall and footwall
- **PDA Mineral Reserves and Resources increased 26% to 1.2 million ounces.** A development plan incorporating the larger and higher-grade Mineral Reserve is expected to be completed later this quarter
- **Global Measured and Indicated Mineral Resources increased 12% to 4.4 million ounces** (108 mt grading 1.27 g/t Au), with grades increasing 9% reflecting higher-grade additions at Island Gold and growth at Young-Davidson
- **Global Inferred Mineral Resources increased 3% to 7.3 million ounces** (128 mt grading 1.77 g/t Au), reflecting increases at Island Gold and Lynn Lake

Acquisition of Orford Mining

On January 15, 2024, the Company entered into a definitive agreement (the "Agreement") pursuant to which the Company will acquire all of the issued and outstanding shares of Orford Mining Corporation ("Orford") by way of a court-approved plan of arrangement (the "Transaction"). The acquisition will consolidate Alamos' existing ownership of Orford shares through which the Company will add the highly prospective Qiqavik Gold Project, located in Quebec, Canada. Alamos will also be acquiring interests in several exploration stage critical mineral and gold projects in Quebec, including West Raglan, the Joutel Properties, and Nunavik Lithium. Under the terms of the Agreement, Orford shareholders will receive 0.005588 of the Company's common shares for each Orford share, representing a value of C$0.10 per Orford share at the time of announcement. The Company currently owns 61,660,902 Orford shares, representing approximately 27.5% of Orford's basic common shares outstanding. Excluding the Company's existing ownership of Orford, it expects to issue approximately 0.9 million shares for total consideration of approximately $12.0 million. The Company expects the transaction to close in April 2024.

Lynn Lake Feasibility Study

On August 2, 2023, the Company reported the results of an updated Feasibility Study conducted on the Lynn Lake project ("2023 Study"). The 2023 Study replaces the previous Feasibility Study completed in 2017 ("2017 Study") and incorporates a 44% larger Mineral Reserve and 14% increase in milling rates to 8,000 tpd, supporting a larger, longer-life, low-cost operation with attractive economics and significant exploration upside.

The 2023 Study demonstrates higher average annual gold production of 207,000 ounces over the first five years and 176,000 ounces over the initial ten years, a 23% increase from the 2017 study. Mine-site all-in sustaining costs are estimated to average $699 per ounce over the first ten years, and $814 per ounce over the life of mine. This represents a 6% decrease from the 2017 Study over the initial 10 years, with economies of scale provided by the larger operation, and higher average grades, more than offsetting cost inflation.

Acquisition of Manitou Gold

On May 23, 2023, the Company completed the acquisition of all of the issued and outstanding shares of Manitou Gold Inc. ("Manitou") by way of a court-approved plan of arrangement (the "Manitou Transaction"). The acquisition consolidated Alamos' existing ownership of Manitou shares and increased its regional land package around Island Gold with the addition of the Goudreau Property which totals 40,000 hectares ("ha") adjacent to, and along strike from the Island Gold Mine. Alamos' land package around Island Gold has more than tripled to 55,277 ha, adding significant exploration potential across the relatively under explored Michipicoten Greenstone Belt. The Company issued $13.4 million in shares to complete the Manitou Transaction.

Outlook and Strategy

[1] Refer to the "Non-GAAP Measures and Additional GAAP" disclosure at the end of this MD&A for a description of these measures.
[2] For the purposes of calculating mine-site all-in sustaining costs at individual mine sites, the Company does not include an allocation of corporate and administrative and share based compensation expenses to the mine sites.
[3] Cost of sales includes mining and processing costs, royalties, and amortization expense, and is calculated based on the mid-point of total cash cost guidance.

The Company's objective is to operate a sustainable business model that supports growing returns to all stakeholders over the long-term, through growing production, expanding margins, and increasing profitability. This includes a balanced approach to capital allocation focused on generating strong ongoing free cash flow while re-investing in high-return internal growth opportunities, and supporting higher returns to shareholders.

2023 Year in Review

With the strong finish to the year, the Company delivered record operational and financial performance in 2023. This included record annual production of 529,300 ounces which drove record revenues of $1.0 billion and record operating cash flows of $472.7 million. Full year production was 15% higher than 2022 and achieved the high end of increased guidance. Costs were also in line with annual guidance. Reflecting the strong operational and financial performance, and balanced approach to growth, the Company generated consolidated free cash flow of $123.8 million in 2023 while investing in the Phase 3+ Expansion.

La Yaqui Grande continued to outperform, contributing to a 58% increase in production from the Mulatos District, at 22% lower costs. This exceeded annual production guidance, driving a substantial increase in mine-site free cash flow from Mulatos to $142.1 million. Young-Davidson delivered its third consecutive year of mine-site free cash flow in excess of $100 million and is well positioned to deliver similar levels of free cash flow over the long-term. Island Gold continued to perform well while self-funding the majority of the Phase 3+ Expansion capital. The expansion remains on track for completion in 2026 with significant progress made through 2023. All the major components of the shaft site infrastructure have now been completed, including the headframe and hoist house, which enabled the start of shaft sinking in December 2023.

Additionally, the Company delivered on a number of key catalysts, supporting ongoing value creation within its pipeline of growth projects. This included achieving a significant permitting milestone and completing an updated Feasibility Study on the Lynn Lake project, which outlined a larger, longer-life, low-cost operation with attractive economics and significant exploration upside. The Company also demonstrated another year of exploration success, most notably at Island Gold and Puerto Del Aire ("PDA") driving a further increase in high-grade Mineral Reserves and Resources. The increase in high-grade Mineral Reserves at PDA is being incorporated into a development plan to be completed during the first quarter of 2024 which is expected to outline a significant mine life extension at Mulatos.

As announced earlier this week, Global Mineral Reserves increased to 10.7 million ounces of gold (202 mt grading 1.65 g/t Au), a 2% increase from 2022, with a further 1% increase in grades. This marks the fifth consecutive year of growth in Mineral Reserves for a combined increase of 10% over that time frame. Grades have also increased 9% over that period as Mineral Reserves continue to grow both in size and quality. The increase in 2023 driven by higher-grade additions at Island Gold and PDA, as well as growth at Lynn Lake.

Island Gold's tremendous pace of growth continued in 2023 with an 18% increase in Mineral Reserves to 1.7 million ounces, and 16% increase in combined Mineral Reserves and Resources to 6.1 million ounces. PDA's Mineral Reserves increased 33% to 1.0 million ounces with grades increasing a further 16%. Both deposits remain open in multiple directions, highlighting the significant potential for this growth to continue. Reflecting the continued exploration success and growth potential, the Company has increased its 2024 exploration budget to the largest in its history.

2024 Outlook

The Company provided three-year production and operating guidance in January 2024, which outlined growing production at declining costs over the next three years. Refer to the Company's January 10, 2024 guidance press release for a summary of the key assumptions and related risks associated with the comprehensive 2024 guidance and three-year production, cost and capital outlook. Gold production in 2024 is expected to range between 485,000 and 525,000 ounces, a 3% increase from the previous three-year guidance provided in January 2023 (based on the mid-point). Total cash costs and AISC are expected to be consistent with 2023.

The increased production guidance was driven by higher expected production from the Mulatos District through residual leaching of the Mulatos leach pad. La Yaqui Grande is expected to supply approximately 75% of Mulatos District production at a similar low-cost structure as 2023. The remaining production is expected to come from residual leaching of the main Mulatos leach pad which carries higher reported AISC, though with the majority of these costs previously incurred, the recovery of these ounces is expected to be very profitable from a cash flow perspective.

Production is expected to be slightly higher during the first half of 2024, with the recovery of ounces through residual leaching at Mulatos expected to decline through the year. First quarter production is expected to be between 123,000 and 133,000 ounces with total cash costs and AISC above the top end of annual guidance reflecting a larger proportion of production coming through residual leaching at Mulatos and slightly lower planned grades at Young-Davidson. Consistent with annual guidance, costs are expected to trend lower through the year reflecting declining rates of production from residual leaching at Mulatos.

Production is expected to increase 7% by 2026 to between 520,000 and 560,000 ounces, with AISC decreasing 11% to between $975 and $1,075 per ounce reflecting low-cost production growth from Island Gold with the completion of the Phase 3+ Expansion. The three year guidance excludes the higher grade PDA project which represents potential production upside at Mulatos as early as 2026. This upside is expected to be outlined in a development plan for PDA to be released during the first quarter of 2024. Looking beyond 2026, the Lynn Lake project is expected to support further potential growth as early as the second half of 2027.

Capital spending is expected to increase from 2023 reflecting inflation, higher capital at Island Gold and Lynn Lake, and an increased capitalized exploration budget. Capital spending on the Lynn Lake project is expected to more than double the amount spent in 2023. Spending at Lynn Lake will be focused on upgrades to site access and infrastructure, including early work on the power line upgrade, in advance of a construction decision anticipated in 2025. Additionally, a portion of the 2024 exploration program will be focused on converting Mineral Resources at the Burnt Timber and Linkwood satellite deposits into a smaller, higher quality Mineral Reserve. A study incorporating these deposits into the Lynn Lake project is expected to be competed in the fourth quarter of 2024, and represents potential production and economic upside to the 2023 Feasibility Study.

Given the strong profitability of the Mulatos operation in 2023, the Company expects to pay significantly higher cash tax payments in Mexico in 2024, which includes the 2023 year-end tax payment due in the first quarter of approximately $40 million. Combined with an expected decrease in costs through the year, the Company expects stronger free cash flow starting in the second quarter of 2024.

The global exploration budget for 2024 is $62 million, a 19% increase from $52 million spent in 2023. The increase reflects expanded budgets across all key assets following up on broad-based exploration success in 2023. Island Gold and the Mulatos District account for approximately 60% of the total budget with $19 million planned for each asset. This is followed by $12 million at Young-Davidson, $9 million at Lynn Lake and $2 million at Golden Arrow.

The Company's liquidity position remains strong, ending the year with $224.8 million of cash and cash equivalents, $13.0 million in investments in equity securities, and no debt, an increase from $129.8 million at the end of 2022 reflecting strong free cash flow generation throughout the year. Additionally, the Company has a $500 million undrawn credit facility, providing total liquidity of $737.8 million.

Young-Davidson

The Young-Davidson mine is located near the town of Matachewan in Northern Ontario, Canada. The property consists of contiguous mineral leases and claims totaling 5,720 ha and is situated on the site of two past producing mines that produced over one million ounces of gold between 1934 and 1957. The Young-Davidson mine declared commercial production in 2013.

Young-Davidson Financial and Operational Review

	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022

[1] Cost of sales includes mining and processing costs, royalties and amortization.
[2] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.
[3] For the purposes of calculating mine-site all-in sustaining costs, the Company does not include an allocation of corporate and administrative and share based compensation expenses.
[4] Grams per tonne of gold ("g/t Au").

Operational review

Young-Davidson produced 49,800 ounces of gold in the fourth quarter, a 12% increase compared to the prior year period, reflecting higher grades mined. With the strong finish to the year, Young-Davidson produced 185,100 ounces in 2023, achieving the low end of annual guidance.

Underground mining rates averaged 7,475 tpd in the fourth quarter, higher than the prior year period but below annual guidance due to maintenance on the headframe ore bin apron feeder. For the full year, mining rates averaged 7,885 tpd, consistent with guidance. Grades mined averaged 2.39 g/t Au in the fourth quarter, a 16% increase from the third quarter and a 3% increase compared to the prior year period. Grades increased as planned, reflecting the mining of higher grade stopes that had been deferred from the third quarter. Grades averaged 2.20 g/t Au for the year, in line with guidance.

Milling rates averaged 7,877 tpd in the fourth quarter, exceeding the prior year period as well as mining rates, with surface stockpiles supplementing mill feed. Milling rates averaged 7,885 tpd for the full year, consistent with the prior year and annual guidance. Mill recoveries averaged 91% in the quarter and 90% for the full year, both in line with guidance.

Financial Review

Fourth quarter revenues of $94.8 million were 21% higher than the prior year period, resulting from a higher realized gold price and a 7% increase in ounces sold. Full year revenues of $355.3 million were 2% higher than the prior year, due to the higher realized gold price, offset by less ounces sold.

Cost of sales of $64.6 million in the fourth quarter were 4% higher than the prior year period, resulting from higher unit costs and higher tonnage processed. Underground mining costs were CAD $55 per tonne in the quarter, an increase from earlier in the year reflecting fewer tonnes mined, as well as inflationary pressures, primarily labour. Cost of sales of $248.2 million for the full year were in line with the comparable period.

Total cash costs were $920 per ounce in the fourth quarter and $938 per ounce for the full year. Mine-site AISC were $1,211 per ounce in the quarter and $1,208 per ounce for the full year. Both metrics were consistent with annual guidance in the fourth quarter and full year. Full year costs were higher than the comparative periods due to inflationary pressures and slightly lower grades processed.

Capital expenditures in the fourth quarter included $13.9 million of sustaining capital and $8.8 million of growth capital. Additionally, $1.3 million was invested in capitalized exploration in the quarter. Capital expenditures, inclusive of capitalized exploration, totaled $67.2 million for the full year, a 6% decrease from the prior year and in line with annual guidance.

Young-Davidson continues to demonstrate strong operational and financial consistency with mine-site free cash flow of $35.0 million in the fourth quarter, and a record $117.6 million for 2023. This marked the third consecutive year the operation has generated more than $100 million of mine-site free cash flow. With a 15-year Mineral Reserve life, Young-Davidson is well positioned to generate similar levels of free cash flow over the long-term.

Island Gold

The Island Gold mine is a high grade, low cost underground mining operation located just east of the town of Dubreuilville, Ontario, Canada, 83km northeast of Wawa. Alamos holds 100% of all mining titles related to the Island Gold property, which comprises approximately 55,277 ha. The mine began production in October 2007.

During the second quarter of 2023, the Company completed the acquisition of Manitou. The acquisition increased its regional land package around Island Gold with the addition of the Goudreau Property. This includes 40,000 ha adjacent to, and along strike, from the Island Gold Mine, adding significant exploration potential across the relatively under explored Michipicoten Greenstone Belt.

Island Gold Financial and Operational Review

	Three Months Ended December 31,		Years Ended December 31,

[1] Cost of sales includes mining and processing costs, royalties, and amortization.
[2] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.
[3] For the purposes of calculating mine-site all-in sustaining costs, the Company does not include an allocation of corporate and administrative and share based compensation expenses.
[4] Grams per tonne of gold ("g/t Au").

Operational review

Island Gold produced 31,600 ounces in the fourth quarter of 2023, a 22% decrease from the prior year period, resulting from lower grades mined and processed, as planned. For the full year, Island Gold produced 131,400 ounces, achieving the mid-point of full year production guidance.

Underground mining rates averaged 1,249 tpd in the fourth quarter, exceeding annual guidance, and a 14% increase from the prior year period. Mining rates for the full year were in line with guidance. Grades mined averaged 8.96 g/t Au in the quarter, and 9.43 g/t Au for the full year, both consistent with annual guidance.

Mill throughput also exceeded guidance, averaging 1,266 tpd for the quarter. Mill throughput was lower than the prior year period, as the fourth quarter of 2022 included processing of approximately 5,800 tonnes of Island Gold stockpiled ore at the Young-Davidson mill. Mill recoveries averaged 98% in the fourth quarter and 97% for the full year, consistent with guidance.

Financial Review

Revenues of $60.0 million in the fourth quarter were 12% lower than the prior year period reflecting lower ounces sold, partly offset by higher realized gold prices. Revenues of $247.8 million for the full year were 5% higher than the prior year period primarily due to the higher realized gold prices.

Cost of sales of $33.8 million in the fourth quarter was 4% lower than the prior year period, resulting from the lower production in the quarter. For the full year, cost of sales were $123.6 million, 3% higher than the prior year period, driven by inflationary pressures on mining and processing costs.

Total cash costs of $775 per ounce and mine-site AISC of $1,136 per ounce in the fourth quarter were both higher than the prior year period reflecting lower production with the lower grades mined, ongoing inflationary pressures, primarily labour, as well as non-recurring costs associated with the transition from contractor to owner development and production drilling, which was completed in the quarter. Total cash costs of $669 per ounce and mine-site AISC of $1,017 per ounce for the full year were higher than the comparable period, and slightly above annual guidance.

Total capital expenditures were $73.9 million in the fourth quarter, including $59.7 million of growth capital and $3.3 million of capitalized exploration. Growth capital spending remained focused on the Phase 3+ Expansion shaft site infrastructure. This included the commissioning of the shaft sinking plant, completion of buried services and grid power tie-in for the shaft site and upgraded voltage regulation facility. The Phase 3+ Expansion achieved a significant milestone during the quarter with the start of shaft sinking in December. Additionally, capital spending was focused on lateral development and other surface infrastructure. For the full year, capital spending totaled $233.1 million, inclusive of capitalized exploration of $11.1 million, with the majority related to construction activities on the Phase 3+ Expansion. Capital spending for the year was in line with annual guidance.

Mine-site free cash flow was negative $34.0 million in the fourth quarter and negative $68.2 million for the full year given the significant capital investment related to the Phase 3+ Expansion. At current gold prices, Island Gold is expected to continue funding the majority of the Phase 3+ Expansion capital. The operation is expected to generate significant free cash flow from 2026 onward with the completion of the expansion.

Mulatos District

The Mulatos District (Mulatos and La Yaqui Grande mines) is located within the Salamandra Concessions in the Sierra Madre Occidental mountain range in the State of Sonora, Mexico. The Company controls a total of 28,972 hectares of mineral concessions within the Mulatos District. The Mulatos mine achieved commercial production in 2006, with La Yaqui Grande commencing operations in June 2022.

Mulatos District Operational Review

The Mulatos District produced 48,100 ounces in the fourth quarter, 2% lower than the prior year period, reflecting lower stacking rates with the end of mining in the main Mulatos open pit during the third quarter of 2023. Production for the full year totaled 212,800 ounces, exceeding the top end of annual guidance by 15%, driven by the strong performance from La Yaqui Grande.

La Yaqui Grande Operational Review

La Yaqui Grande produced 33,700 ounces in the fourth quarter, and 153,400 ounces for the full year, exceeding expectations, reflecting higher than planned mining rates and grades mined. Grades stacked averaged 1.64 g/t Au in the fourth quarter, and 1.55 g/t Au for the full year, both above annual guidance of 1.15 to 1.45 g/t Au, reflecting positive grade reconciliation. Stacking rates of 10,400 tpd in the fourth quarter were consistent with the third quarter and slightly above annual guidance. The recovery rate was 67% in the fourth quarter, lower than annual guidance, reflecting the timing of recoveries, with the highest grade ore stacked in December, which will be recovered in 2024. The full year recovery rate of 78% was slightly below guidance reflecting the above noted timing of higher grades stacked late in the year.

Mulatos Operational Review

Mulatos produced 14,400 ounces in the fourth quarter and 59,400 ounces for the full year. Production was lower than the prior year periods reflecting completion of mining from the El Salto portion of the pit in July. Stacking of remaining stockpiles was completed in the fourth quarter and residual leaching commenced in December 2023. The operation is expected to benefit from ongoing gold production at decreasing rates in 2024 through residual leaching of the leach pad.

Financial Review (Mulatos District)

Revenues of $99.8 million in the fourth quarter were 16% higher than the prior year period, reflecting higher realized gold prices. Revenues of $420.2 million for the full year, were 76% higher than the prior year, driven by significantly higher gold production and sales and the higher realized gold price.

Cost of sales of $68.3 million in the fourth quarter were 22% higher than in the prior year period due to a higher proportion of production from the main Mulatos operation, the stronger Mexican Peso, and ongoing inflationary pressures. For the full year, cost of sales of $265.9 million were 12% higher than the comparable period, due to the significant increase in production. On a per ounce basis, cost of sales were 31% lower than the prior year reflecting the greater contribution of low-cost ounces at La Yaqui Grande.

Total cash costs of $957 per ounce and mine-site AISC of $1,030 per ounce in the fourth quarter were higher than the prior year period due to a higher proportion of production from the main Mulatos operation, the stronger Mexican Peso, and ongoing inflationary pressures. Total cash costs for the full year were $883 per ounce, below annual guidance, driven by the outperformance of La Yaqui Grande with higher grades and stacking rates. Mine-site AISC of $967 per ounce for the full year were in line with annual guidance.

Total cash costs and mine-site AISC for the Mulatos District are expected to increase slightly in 2024 reflecting additional production from residual leaching of the main Mulatos leach pad, which also drove the increase in production guidance from a year ago. The ounces recovered through residual leaching carry higher reported mine-site AISC of approximately $1,850 per ounce. The majority of these costs were previously incurred and recorded in inventory. The cash component to recover these ounces in 2024 is expected to be approximately $800 per ounce providing stronger free cash flow than implied by the higher reportable costs.

Capital expenditures totaled $8.4 million in the fourth quarter, including sustaining capital of $1.8 million, and $5.5 million of capitalized exploration focused on drilling at PDA. For the full year, capital spending totaled $30.4 million, including $11.8 million of capitalized exploration. Total sustaining and growth capital spending was in line with guidance for the full year. Capitalized exploration was higher than initially budgeted, reflecting increased spending following up on continued exploration success at PDA.

The Mulatos District generated mine-site free cash flow of $27.4 million in the fourth quarter, and $142.1 million for the full year, driven by the high-margin production growth from La Yaqui Grande. Mulatos paid cash taxes of $8.3 million during 2023. Given the increased profitability of the operation, the Company expects to make significantly higher cash tax payments in Mexico in 2024. This includes the 2023 year end tax payment due in the first quarter, which is expected to be approximately $40 million.

Fourth Quarter 2023 Development Activities

Island Gold (Ontario, Canada)

Phase 3+ Expansion

On June 28, 2022, the Company reported results of the Phase 3+ Expansion Study ("P3+ Expansion Study") conducted on its Island Gold mine, located in Ontario, Canada.

The Phase 3+ Expansion to 2,400 tpd from the current rate of 1,200 tpd will involve various infrastructure investments. These include the installation of a shaft, paste plant, expansion of the mill as well as accelerated development to support the higher mining rates. Following the completion of the expansion in 2026, the operation will transition from trucking ore and waste up the ramp to skipping ore and waste to surface through the new shaft infrastructure, driving production higher and costs significantly lower.

Construction continued through the fourth quarter of 2023, including the start of shaft sinking in December, which was a significant milestone for the project. Further details on progress to the end of the year are summarized below:

- Completed the grid power tie-in for the shaft site and upgraded voltage regulation facility
- Commissioned the shaft sinking plant
- Mechanical and electrical outfitting for hoist house and headframe substantially complete
- Completed structural steel, roofing, interior and exterior cladding for the warehouse
- Completed buried services required for shaft sink, with first blast occurring in December
- Paste plant detailed engineering 75% complete; issuance of long lead time equipment procurement packages is ongoing with construction activities expected to begin in the second half of 2024
- Mill expansion basic engineering completed, and detailed engineering commenced in December with overall engineering being 40% complete. Issuance of long lead time equipment procurement packages is ongoing with construction activities on the mill expansion expected to commence in the second quarter of 2024
- Advanced lateral development to support higher mining rates with the Phase 3+ Expansion

The Phase 3+ Expansion remains on schedule to be completed during the first half of 2026. During the fourth quarter of 2023, the Company spent $59.7 million on the Phase 3+ Expansion and capital development. As of December 31, 2023, 51% of the total initial growth capital of $756 million has been spent and committed on the project. Capital spending is tracking well for work completed to date; however, continuing labour cost pressures may impact future project costs. Progress on the Expansion is detailed as follows:

(in US$M) Growth capital (including indirects and contingency)	P3+ 2400 Study[1]	Spent to date[2]	Committed to date	% of Spent & Committed
Shaft & Shaft Surface Complex	229	143	63	90 %
Mill Expansion	76	5	15	26 %
Paste Plant	52	1	2	6 %
Power Upgrade	24	8	6	58 %
Effluent Treatment Plant	16	—	—	—
General Indirect Costs	64	33	5	59 %
Contingency[3]	55	—	—	
Total Growth Capital	$516	$190	$91	54 %
Underground Equipment & Infrastructure	79	32	—	41 %
Accelerated Capital Development	162	71	—	44 %
Total Growth Capital (including Accelerated Spend)	$756	$293	$91	51 %

1. Phase 3+ 2400 Study is as of January 2022. Phase 3+ capital estimate based on USD/CAD exchange $0.78:1. Spent to date based on average USD/CAD of $0.76:1 since the start of 2022. Committed to date based on the spot USD/CAD rate as at December 31, 2023 of $0.76:1.
2. Amount spent to date accounted for on an accrual basis, including working capital movements.
3. Contingency has been allocated to the various areas.

Growth capital spending at Island Gold on the Phase 3+ Expansion is expected to be between $210 million and $230 million in 2024. Capital spending is expected to remain at similar levels in 2025 and then drop considerably in 2026 once the expansion is completed during the first half of 2026.

Shaft site area - February 2024

Lynn Lake (Manitoba, Canada)

In March 2023, the Company achieved a significant permitting milestone for the Lynn Lake project with a positive Decision Statement issued by the Department of Environment and Climate Change Canada based on the completed Federal Environmental Impact Statement ("EIS"), and Environment Act Licenses issued by the Province of Manitoba. Additionally, during the second quarter, the Company finalized an Impact Benefit Agreement and participated in a signing ceremony with Marcel Colomb First Nation, the most proximate First Nation to the project. As previously disclosed, the Mathias Colomb Cree Nation has brought an application for judicial review of the Decision Statement issued by the Department of Environment and Climate Change and an internal appeal of the Environment Act Licenses issued by the Province of Manitoba. At this time, the application and appeal are not expected to impact Lynn Lake project timelines. The Company continues to actively engage with the Mathias Colomb Cree Nation during this period.

On August 2, 2023, the Company reported the results of an updated Feasibility Study ("2023 Study") conducted on the project which replaces the previous Feasibility Study completed in 2017 ("2017 Study"). The 2023 Study incorporates a 44% larger Mineral Reserve and 14% increase in milling rates to 8,000 tpd supporting a larger, longer-life, low-cost operation. The 2023 Study has been updated to reflect the current costing environment, as well as a significant amount of additional engineering, on-site geotechnical investigation work, and requirements outlined during the permitting process with the EIS granted in March.

2023 Study Highlights:

Higher production: average annual gold production of 207,000 ounces over the first five years and 176,000 ounces over the initial 10 years

- The 10-year average represents a 23% increase over the annual average of 143,000 ounces in the 2017 Study

Low-cost profile: average mine-site all-in sustaining costs of $699 per ounce over the first 10-years and $814 per ounce over the life of mine

- Average mine-site all-in sustaining costs decreased 6% from the 2017 Study over the initial 10-years with economies of scale provided by the larger operation, and higher average grades, more than offsetting cost inflation

Larger, longer-life operation supported by 44% larger Mineral Reserve with further upside potential

- 44% larger Mineral Reserve totaling 2.3 million ounces grading 1.52 g/t Au (47.6 million tonnes ("mt"))
- 17-year mine life, up from 10 years in the 2017 Study

- Life of mine production of 2.2 million ounces, a 46% increase from 1.5 million ounces reported in 2017

Modest increase in capital intensity with larger operation and 46% increase in life of mine production partly offsetting inflation

- Initial capital of $632 million, and life of mine capital including sustaining capital and reclamation of $832 million, increased from the 2017 Study reflecting inflation and scope changes with the larger operation and Mineral Reserve
- Total life of mine capital of $381 per ounce increased 17% from $325 per ounce in the 2017 Study with the larger Mineral Reserve and economies of scale partly offsetting the significant industry-wide capital inflation experienced since 2017

Project de-risked given advanced level of engineering, additional geotechnical work, and EIS approval

- Detailed engineering 75% complete; basic engineering 100% complete as of December 2023
- EIS approval and Provincial licenses received in March 2023 with requirements outlined through the permitting process incorporated into the 2023 Study

Attractive economics with significant long-term exploration upside potential

- After-tax net present value ("NPV") (5%) of $428 million (base case gold price assumption of $1,675 per ounce and USD/CAD foreign exchange rate of $0.75:1); after-tax internal rate of return ("IRR") of 17%
- After-tax NPV (5%) of $670 million, and an after-tax IRR of 22%, at current gold prices of approximately $1,950 per ounce
- Payback of less than four years at the base case gold price of $1,675 per ounce and less than three years at a $1,950 per ounce gold prices

Significant near-mine and regional exploration upside potential

- The Lynn Lake project encompasses most of the east-trending, 125 km long, Lynn Lake Greenstone Belt in northwestern Manitoba, with a total of 58,000 hectares of mineral tenure, representing significant exploration potential, including:
    - Gordon deposit: higher-grade gold mineralization extended outside of Mineral Reserves and Resources in the northeastern extent of the planned Gordon pit, in an area modeled as waste in the 2023 Study
    - Burnt Timber and Linkwood: potential for smaller, higher-grade Mineral Resource that could be trucked and processed at the planned MacLellan mill later in the mine life
    - Regional targets: extensive pipeline of highly prospective exploration targets at various stages of exploration across the Lynn Lake greenstone belt. This includes the Maynard and Tulune targets where ongoing drilling continues to intersect gold mineralization. Both targets are within trucking distance of the MacLellan mill

Low Greenhouse Gas ("GHG") emission intensity

- 18% decrease in GHG emissions per ounce from the 2017 Study reflecting the incorporation of electric shovels and drills at MacLellan, and productivity improvements with the larger operation
- 58% lower emissions per ounce produced than the industry average. The project will be connected to Manitoba's electric grid, of which nearly all electricity is produced from clean, renewable power, supporting the company-wide target of a 30% reduction in absolute GHG emissions by 2030

Development spending (excluding exploration) was $3.0 million in the fourth quarter of 2023 on engineering to support the updated Feasibility Study. For the full year, development spending (excluding exploration) was $11.6 million.

Capital spending on the Lynn Lake project, excluding exploration, is expected to total $25 million in 2024. This is up from 2023 reflecting planned upgrades to the site access and infrastructure. With approval of the EIS received in March 2023, and the positive Feasibility Study completed in August 2023, the focus in 2024 will be on further de-risking and advancing the project ahead of an anticipated construction decision in 2025. This includes finishing detailed engineering, which is 75% complete, upgrading road access, and early work on the power line upgrade. The majority of the $25 million capital budget in 2024 is spending included as initial capital in the 2023 Feasibility Study.

With $224.8 million of cash as of December 31, 2023, no debt, strong ongoing free cash flow generation, and significant free cash flow growth expected from Island Gold in 2026 and beyond, the Company is well positioned to fund development of Lynn Lake internally.

Kirazlı (Çanakkale, Türkiye)

On October 14, 2019, the Company suspended all construction activities on its Kirazlı project following the Turkish government's failure to grant a routine renewal of the Company's mining licenses, despite the Company having met all legal and regulatory requirements for their renewal. In October 2020, the Turkish government refused the renewal of the Company's Forestry Permit. The Company had been granted approval of all permits required to construct Kirazlı including the Environmental Impact Assessment approval, Forestry Permit, and GSM (Business Opening and Operation) permit, and certain key permits for the

nearby Ağı Dağı and Çamyurt Gold Mines. These permits were granted by the Turkish government after the project earned the support of the local communities and passed an extensive multi-year environmental review and community consultation process.

On April 20, 2021, the Company announced that its Netherlands wholly-owned subsidiaries Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V. (the "Subsidiaries") would be filing an investment treaty claim against the Republic of Türkiye for expropriation and unfair and inequitable treatment. The claim was filed under the Netherlands-Türkiye Bilateral Investment Treaty (the "Treaty"). Alamos Gold Holdings Coöperatief U.A. and Alamos Gold Holdings B.V. had their claim against the Republic of Türkiye registered on June 7, 2021 with the International Centre for Settlement of Investment Disputes (World Bank Group).

Bilateral investment treaties are agreements between countries to assist with the protection of investments. The Treaty establishes legal protections for investment between Türkiye and the Netherlands. The Subsidiaries directly own and control the Company's Turkish assets. The Subsidiaries invoking their rights pursuant to the Treaty does not mean that they relinquish their rights to the Turkish project, or otherwise cease the Turkish operations. The Company will continue to work towards a constructive resolution with the Republic of Türkiye.

The Company incurred $1.3 million in the fourth quarter related to ongoing care and maintenance and arbitration costs to progress the Treaty claim, which was expensed. For the full year, the Company incurred $2.9 million.

Fourth Quarter 2023 Exploration Activities

Island Gold (Ontario, Canada)

Total exploration expenditures during the fourth quarter were $4.2 million, of which $3.3 million was capitalized. For 2023, exploration expenditures totaled $14.8 million, of which $11.1 million was capitalized, consistent with the annual budget. The focus of the 2023 exploration program was on defining new Mineral Reserves and Resources in proximity to existing production horizons and infrastructure through a more cost-effective expanded underground drilling program that will leverage existing underground infrastructure.

As announced earlier this week, the program was successful with high-grade Mineral Reserves and Resources added across all categories to now total 6.1 million ounces, a 16% increase from the end of 2022. This included an 18% increase in Mineral Reserves to 1.7 million ounces (5.2 mt grading 10.30 g/t Au), a 146% increase in Measured and Indicated Mineral Resources to 0.7 million ounces (2.6 mt grading 8.73 g/t Au) and a 4% increase in Inferred Mineral Resources to 3.7 million ounces (7.9 mt grading 14.58 g/t Au).

The majority of these high-grade Mineral Reserve and Resource additions were in proximity to existing production horizons and infrastructure. This included additions within the main Island Gold structure as well as within the hanging wall and footwall. Given their proximity to existing infrastructure, these ounces are expected to be low cost to develop and could be incorporated into the mine plan and mined within the next several years, further increasing the value of the operation.

A regional exploration program was also completed in 2023 with the focus on evaluating and advancing exploration targets outside the Island Gold Deposit on the 55,300 ha Island Gold property. The program was successful in defining high-grade mineralization at two targets near the Island Gold mine. This included the Pine Zone, located 4 km northeast of Island Gold, and the 88-60 Zone, located 7 km from Island Gold, in proximity to the historic Cline and Edwards mines (see press release dated November 9, 2023).

A total of 9,378 m of underground exploration drilling in 30 holes was completed in the fourth quarter. Additionally, a total of 9,481 m of underground delineation drilling was completed in 34 holes, focused on in-fill drilling to convert Mineral Resources to Mineral Reserves. For the full year, 157 holes totaling 39,110m were completed as part of the underground exploration program, and 155 holes totaling 31,636 m as part of the underground delineation drilling program. A total of 139 m of underground exploration drift development was also completed during the fourth quarter, totaling 404 m as of year end.

As announced in the February 13, 2024 press release, underground exploration drilling continues to extend high-grade gold mineralization across the Island Gold Deposit within the main E1E and C-Zones, as well as several hanging wall and footwall structures in proximity to existing underground infrastructure.

Island Gold Main zone exploration highlights: high-grade mineralization extended outside of Mineral Reserves and Resources in the E1E and C-Zones. These zones are the main structures which host the majority of currently defined Mineral Reserves and Resources at Island Gold. Previously reported highlights include[1]:

- *Island East (E1E-Zone)*
  - 34.48 g/t Au (34.48 g/t cut) over 2.82 m (840-632-49);
  - 20.85 g/t Au (20.85 g/t cut) over 2.41 m (1040-619-20);
  - 19.22 g/t Au (19.22 g/t cut) over 2.05 m (945-624-34); and
  - 16.13 g/t Au (16.13 g/t cut) over 2.45 m (840-530-09).

- *Island West (C-Zone)*
  - 106.04 g/t Au (48.86 g/t cut) over 2.38 m (490-456-13); and
  - 19.56 g/t Au (19.56 g/t cut) over 3.81 m (790-479-40).

Island Gold Hanging wall and Footwall exploration highlights: high-grade gold mineralization intersected within several recently defined hanging wall and footwall zones across the main Island Gold Deposit. These zones represent a significant opportunity to add near mine Mineral Reserves and Resources which would be low-cost to develop and produce given their proximity to existing infrastructure. This includes the NS1 Zone which was discovered early in 2023 and was being developed and mined by the end of the year. Previously reported highlights include[1]:

- *Island West Hanging Wall Zones*

  B Zone
  - 29.33 g/t Au (23.89 g/t cut) over 6.93 m (790-479-34);
  - 40.36 g/t Au (40.36 g/t cut) over 3.91 m (790-479-40);
  - 65.23 g/t Au (24.36 g/t cut) over 2.28 m (900-506-09);

  NS1 Zone: currently defined over a North-South strike of approximately 70 m and vertical continuity of over 450 m, and remains open up and down dip
  - 23.34 g/t Au (12.56 g/t cut) over 4.03 m (900-506-10);
  - 17.30 g/t Au (8.61 g/t cut) over 3.41 m (900-506-11A);
  - 12.33 g/t Au (12.33 g/t cut) over 3.96 m (900-506-07); and
  - 10.46 g/t Au (10.46 g/t cut) over 4.17 m (900-506-08).
  - Island East Footwall Zones

  E1D1 Zone
  - 67.08 g/t Au (13.21 g/t cut) over 2.56 m (1040-619-22);
  - 50.10 g/t Au (12.67 g/t cut) over 2.35 m (1040-619-31); and
  - 14.78 g/t Au (14.39 g/t cut) over 2.17 m (1040-619-20).

  E1D Zone
  - 228.50 g/t Au (70.63 g/t cut) over 2.79 m (945-624-31A); and
  - 52.31 g/t Au (15.13 g/t cut) over 2.06 m (945-624-32).

Other Hanging Wall and Footwall intersections: drilling continues to intersect high-grade mineralization in proximity to existing underground infrastructure in yet to be defined zones. These are part of more than 2,000 intersections above 3 g/t Au outside of existing Mineral Reserves and Resources in the hanging wall and footwall, highlighting the opportunity for significant near-mine additions as ongoing drilling further defines these areas. Previously reported highlights include[2]:

Footwall
- 1389.65 g/t Au over 2.90 m (620-595-02);
- 39.42 g/t Au over 2.45 m (840-632-49);
- 25.85 g/t Au over 3.65 m (840-632-41);
- 18.71 g/t Au over 3.45 m (1015-640-06); and
- 16.05 g/t Au over 2.75 m (840-632-41).

Hanging Wall
- 103.37 g/t Au over 2.90 m (900-506-13);
- 52.65 g/t Au over 2.15 m (900-506-06); and
- 17.33 g/t Au over 2.70 m (900-506-13).

[1] All reported composite intervals are calculated true width of the mineralized zones, unless otherwise stated. Drillhole composite intervals reported as "cut" may include higher grade samples which have been cut to: Island West (C-zone) and Island Main @ 225 g/t Au; Island Main and East (E1E Zone) @ 185 g/t Au; E1D Zone @ 100 g/t Au; B Zone, E1D1 zone and NS1 @ 90 g/t Au.

[2] All reported composite intervals are core length, true width is unknown at this time, and gold grades are reported as uncut).

Young-Davidson (Ontario, Canada)

Total exploration expenditures during the fourth quarter were $1.7 million of which $1.3 million was capitalized. For 2023, exploration spending totaled $8.0 million of which $5.1 million was capitalized, consistent with budget.

During the fourth quarter of 2023, two underground exploration drills completed 5,325 m in 12 holes from the 9220 West exploration drift and the 9025 East Footwall. Drilling is targeting syenite-hosted mineralization as well as continuing to test mineralization in the footwall sediments and in the hanging wall mafic-ultramafic stratigraphy. For the full year, a total of 23,205 m of mine exploration drilling was completed in 56 holes.

In addition, 7,052 m of surface drilling was completed in 21 holes in 2023, primarily focused on the MCM-target area, immediately east and adjacent to the Young-Davidson deposit.

Mulatos District (Sonora, Mexico)

During the fourth quarter, exploration spending at Mulatos totaled $6.0 million of which $5.5 million was capitalized. For 2023, exploration spending totaled $21.7 million of which $11.8 million was capitalized.

During the fourth quarter of 2023, exploration activities continued at PDA and the near-mine area with 15,937 m of drilling completed in 62 holes. Drilling in the fourth quarter focused on in-fill drilling the GAP-Victor portion of the Mineral Resource. The 2023 exploration program was successful in driving a 33% increase in Mineral Reserves at PDA to 1.0 million ounces (5.4 mt grading 5.61 g/t Au) with grades also increasing 16%. This growth in higher-grade Mineral Reserves will be incorporated into an updated development plan which is expected to be completed in the first quarter of 2024.

The regional drilling program was paused during the fourth quarter to complete ground geophysical surveys in the Capulin and Cerro Pelon areas. Drilling at regional targets will resume in the first quarter of 2024.

For the full year, a total of 56,712 m of drilling was completed in 196 holes at PDA including 10 geotechnical holes totaling 2,221 m. A total of 25,459 m of drilling in 79 holes was also completed at several targets across the Mulatos District.

Lynn Lake (Manitoba, Canada)

Exploration spending totaled $0.7 million in the fourth quarter and $6.6 million for the full year, all of which was capitalized. The 2023 drilling campaign was completed by the end of the second quarter comprising 7,979 m of drilling in 29 holes. In the fourth quarter, exploration activities focused on interpretation of results from the 2023 drilling programs, and from the geological mapping, sampling and hand trenching programs completed in the second and third quarters of 2023. Targeting and planning was also completed in the fourth quarter, ahead of the planned 2024 infill drilling program at the Burnt Timber and Linkwood deposits.

Key External Performance Drivers

Gold Price

The Company's financial performance is largely dependent on the price of gold, which directly affects the Company's profitability and cash flow. The price of gold is subject to volatile price movements and is affected by numerous factors, such as the strength of the US dollar, supply and demand, interest rates, and inflation rates, all of which are beyond the Company's control. During the fourth quarter of 2023, the Company realized an average gold price of $1,974 per ounce, $3 per ounce above the London PM Fix price, and a 13% increase compared to $1,741 per ounce in the prior year quarter.

As at December 31, 2023, the Company had 69,750 ounces hedged for 2024 which will ensure a minimum average realized gold price of $1,926 per ounce and a maximum average realized gold price of $2,356 per ounce, regardless of the movement in gold prices during the period.

Foreign Exchange Rates

At the Company's mine sites, a significant portion of operating costs and capital expenditures are denominated in foreign currencies, primarily the Canadian dollar and Mexican peso ("MXN"). Fluctuations in the value of these foreign currencies compared to the US dollar can significantly impact the Company's costs and cash flow. In the fourth quarter of 2023, the Canadian dollar averaged approximately $1.36 CAD to $1 USD, consistent with the fourth quarter of 2022. The Mexican peso averaged 17.55 MXN to $1 USD in the fourth quarter of 2023 compared to 19.68 MXN to $1 USD in the fourth quarter of 2022.

The Company recorded a foreign exchange gain of $0.3 million in the fourth quarter related to the translation of the Company's net monetary assets and liabilities resulting from the strengthening of both the Canadian dollar and the Mexican peso from the end of the third quarter by 2% and 3%, respectively; ending at $1.32 CAD and 16.95 MXN to $1 USD at December 31, 2023. Similarly, a foreign exchange gain of $1.9 million was recorded for the full year, driven by the fluctuations in the Canadian dollar and Mexican peso.

Additionally, the Company is further exposed to currency risk through non-monetary assets and liabilities of subsidiaries whose taxable profit or tax loss are denominated in non-US dollar currencies. Changes in exchange rates gives rise to temporary differences resulting in deferred tax assets and liabilities with the resulting deferred tax charged or credited to income tax expense. The movement of the CAD and MXN rates generated a non-cash foreign exchange gain of $12.3 million in the fourth quarter, and a $16.3 million foreign exchange gain for the full year, on the revaluation of monetary tax and deferred tax balances, which was recorded within deferred tax expense.

The Company actively manages its currency exposure through a hedging program, which resulted in realized foreign exchange gains of $1.9 million during the fourth quarter and $7.1 million for the full year, primarily related to the Mexican Peso. The Company applies hedge accounting; accordingly, these realized gains and losses have been applied against operating and capital costs at the operating mines.

Summarized Financial and Operating Results

(in millions, except ounces, per share amounts, average realized prices, AISC and total cash costs)

	Three Months Ended December 31,		Years Ended December 31,		
	2023	2022	2023	2022	2021
Gold production (ounces)	129,500	134,200	529,300	460,400	457,200
Gold sales (ounces)	129,005	133,164	526,258	456,574	457,517
Operating Revenues	$254.6	$231.9	$1,023.3	$821.2	$823.6
Cost of sales [1]	$166.7	$153.4	$637.7	$608.9	$534.1
Earnings from operations	$71.9	$61.6	$318.1	$111.5	$14.9
Earnings before income taxes	$51.2	$52.6	$293.7	$102.4	$2.3
Net earnings (loss)	$47.1	$40.6	$210.0	$37.1	($66.7)
Adjusted net earnings [2]	$49.2	$33.7	$208.4	$107.9	$162.1
Earnings (loss) per share, basic and diluted	$0.12	$0.10	$0.53	$0.09	($0.17)
Adjusted earnings per share, basic [2]	$0.12	$0.09	$0.53	$0.28	$0.41
Total assets			$4,001.2	$3,674.2	$3,621.5
Total non-current liabilities			829.8	771.2	728.5
Cash flow from operations	$124.1	$102.3	$472.7	$298.5	$356.5
Dividends per share, declared and paid	0.025	0.025	0.10	0.10	0.10
Average realized gold price per ounce	$1,974	$1,741	$1,944	$1,799	$1,800
Cost of sales per ounce of gold sold, including amortization [1]	$1,292	$1,152	$1,212	$1,334	$1,167
Total cash costs per ounce of gold sold [2]	$900	$810	$850	$884	$794
All-in sustaining costs per ounce of gold sold [2]	$1,233	$1,138	$1,160	$1,204	$1,135

[1] Cost of sales includes mining and processing costs, royalties, and amortization expense. For the year ended December 31, 2022, cost of sales includes a $33.9 million non-cash inventory net realizable value adjustment.

[2] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.

Review of Fourth Quarter Financial Results

Operating Revenue

During the fourth quarter of 2023, the Company sold 129,005 ounces of gold for operating revenues of $254.6 million. This represented a 10% increase from the prior year period due to a higher realized gold price, offset by a 3% decrease in ounces sold.

Cost of Sales

Cost of sales were $166.7 million in the fourth quarter, 9% higher than the prior year period. Key drivers of changes to cost of sales as compared to the prior year period were as follows:

Mining and Processing

Mining and processing costs were $113.4 million, 7% higher than the prior year period. The increase primarily reflects the impact of continuing labour and other inflationary pressures on mining and processing costs across the operations. Inflationary pressures and operating costs remained in line with expectations in 2023. The impact of the stronger Mexican peso relative to the annual cost guidance was partly mitigated by the Company's hedge position.

Total cash costs of $900 per ounce and AISC of $1,233 per ounce were higher than the prior year period due to the continuing inflationary pressures on operating costs, and lower grades mined at Island Gold.

Royalties

Royalty expense was $2.7 million in the quarter, slightly higher than the prior year period of $2.2 million due to the higher average realized gold price.

Amortization

Amortization of $50.6 million, or $392 per ounce in the quarter was higher than the prior year period due to the larger production contribution from Young-Davidson which has a higher depletable cost base.

Earnings from Operations

The Company recognized earnings from operations of $71.9 million in the fourth quarter, 17% higher than the prior year period, as a result of the higher realized gold price, and margin expansion, driven by low-cost production growth from La Yaqui Grande.

Net Earnings

The Company reported net earnings of $47.1 million in the fourth quarter, compared to $40.6 million in the prior year period. Adjusted earnings[1] in the fourth quarter were $49.2 million, or $0.12 per share, which included adjustments for unrealized net foreign exchange gains recorded within deferred taxes, and on net monetary assets and liabilities, resulting primarily from the strengthening of both the Canadian dollar and the Mexican peso, and a reduction in the non-cash fair value adjustments on the milestone payments related to the sale of the Esperanza project

[1] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.

Review of 2023 Financial Results

Operating Revenue

During the year ended December 31, 2023, the Company sold 526,258 ounces for record operating revenues of $1.0 billion, 25% higher than the prior year period, driven by increased production from La Yaqui Grande, and a higher average realized gold price.

Cost of Sales

Cost of sales for the full year were $637.7 million, a 5% increase compared to the prior year. Cost of sales in the prior year were impacted by a net realizable value adjustment on the Mulatos heap leach inventory of $33.9 million. In addition to the prior year inventory adjustment, key drivers of cost of sales changes as compared to the prior year were as follows:

Mining and Processing

Mining and processing costs increased to $437.3 million from $394.4 million in the prior year. The increase primarily reflects a full year of operations at La Yaqui Grande in 2023, as well as the impact of labour and other inflation effects on mining and processing costs across the Company's operations. The impact of the stronger Mexican peso relative to the annual cost guidance was partly mitigated by the Company's hedge position on the Mexican peso.

Total cash costs of $850 per ounce and AISC of $1,160 per ounce for 2023 were both lower than the prior year, primarily reflecting the increased contribution of low cost production from La Yaqui Grande.

Royalties

Royalty expense was $10.2 million, a 12% increase compared to $9.1 million in the prior year, due to the higher average realized gold price.

Amortization

Amortization of $190.2 million was higher than the prior year of $171.5 million, driven by a 15% increase in ounces sold. Amortization of $361 per ounce was lower than the prior year amortization of $376 per ounce due to the increased contribution from La Yaqui Grande which has a lower depletable cost base.

Earnings from Operations

The Company recognized earnings from operations of $318.1 million, a significant increase from $111.5 million in the prior year, driven by the Company's record production, and expanded margins. The prior year was also impacted by the net realizable value adjustments on the Mulatos heap leach inventory, as well as an impairment expense related to the sale of the Esperanza project of $38.2 million.

Net Earnings

The Company reported net earnings of $210.0 million compared to $37.1 million in the prior year. The stronger net earnings in 2023 reflect the Company's record operating performance and margin expansion. The prior year was also impacted by the net realizable value adjustment on the Mulatos heap leach inventory, and the impairment expense on the sale of the Esperanza project. On an adjusted basis, earnings for 2023 were $208.4 million, or $0.53 per share, which included adjustments for unrealized foreign exchange gains recorded in deferred taxes of $16.3 million and other losses, net of tax, of $16.6 million.

Consolidated Expenses and Other

(in millions)

	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022
Exploration expense	($2.1)	($2.6)	($18.2)	($18.4)
Corporate and administrative expense	(7.6)	(7.2)	(27.6)	(25.9)
Share-based compensation expense	(6.3)	(7.1)	(21.7)	(18.3)
Finance income (expense)	0.2	(2.2)	(2.5)	(5.7)
Foreign exchange gain (loss)	0.3	(0.2)	1.9	1.7
Other loss	(21.2)	(6.6)	(23.8)	(5.1)

Exploration

Exploration expense primarily relates to expenditures on early-stage exploration projects, regional exploration programs and corporate exploration support. The Company capitalizes near-mine exploration at its three operations and development projects. Exploration expense was consistent with the prior year as an expanded 2023 regional exploration program at Mulatos, offset lower regional spend at the Canadian operations.

Corporate and administrative

Corporate and administrative costs include expenses arising from the overall management of the business that are not part of direct mine operating costs. These costs are incurred at the corporate office located in Canada. Corporate and administrative costs in the fourth quarter were consistent with the prior year period. Costs were higher for the full year as compared to the prior year due to increased personnel and travel costs.

Share-based compensation

Share-based compensation expense of $6.3 million in the fourth quarter was lower than the prior year period due to the change in the Company's share price in the quarter and the corresponding impact on the revaluation of the liability for outstanding cash-based long-term incentives. An overall rising share price throughout 2023 resulted in share-based compensation expense of $21.7 million being higher than the prior year.

Finance expense

Finance expense primarily relates to standby fees on the credit facility and accretion expense arising on decommissioning liabilities, offset by interest earned on cash and cash equivalents. In the fourth quarter, the Company was in a net finance income position compared to the prior year period due to earning more interest income driven by rising interest rates and an increased cash balance. This was partially offset by higher accretion expense. For the full year, finance expense was lower than the prior year due to the higher interest income earned.

Foreign exchange gain (loss)

A foreign exchange gain of $0.3 million was recorded in the fourth quarter and a gain of $1.9 million for the year, compared to a foreign exchange loss of $0.2 million in the prior year period and a gain of $1.7 million for the year.

Other loss

The increase in other loss in the fourth quarter of 2023 and for the full year primarily arose from non-cash fair value adjustments on the milestone payments related to the sale of the Esperanza project of $11.0 million and $13.4 million, respectively.

Consolidated Income Tax Expense

The Company is subject to tax in various jurisdictions, including Mexico and Canada. There are a number of factors that can significantly impact the Company's effective tax rate including the geographic distribution of income, varying rates in different jurisdictions, the non-recognition of tax assets, mining allowances, foreign currency exchange rate movements, changes in tax laws and the impact of specific transactions and assessments. Due to the number of factors that can potentially impact the effective tax rate and the sensitivity of the tax provision to these factors, it is expected that the Company's effective tax rate will fluctuate in future periods.

For the year ended December 31, 2023, the Company recognized a current tax expense of $52.7 million and a deferred tax expense of $31.0 million, compared to a current tax expense of $10.7 million and deferred tax expense of $54.6 million in 2022. The significantly higher current tax expense in 2023 was driven by higher profitability and cashflow in Mexico.

The Company paid cash taxes of $8.3 million related to mining tax and income tax installment payments during 2023. Given the strong profitability of the Mulatos District in 2023, generating $142.1 million in free cash flow year to date, the Company expects to make significantly higher cash tax payments in Mexico in 2024, which includes the 2023 year end tax payment of approximately $40 million due in the first quarter.

The deferred tax expense was driven by the use of tax pools compared to accounting depreciation in the period given strong operating earnings in both Canada and Mexico, partially offset by foreign exchange gains on the strengthening of the Mexican peso and Canadian dollar.

The Company's Mulatos mine in Mexico, as well as the Young-Davidson and Island Gold mines in Canada, pay income taxes based on their tax functional currency which is the Mexican peso and Canadian dollar, respectively. The legal entity financial statements for Mulatos, Young-Davidson and Island Gold include foreign exchange and other income items that differ from the US dollar functional currency financial statements. The Company recognized a foreign exchange gain of $12.3 million in the fourth quarter and $16.3 million for the full year due to the foreign exchange movement.

Financial Condition

	December 31, 2023	December 31, 2022	
Current assets	$586.0	$441.0	Current assets increased compared to 2022, primarily driven by record operating cash flow, partially offset by spending on the Phase 3+ Expansion at Island Gold.
Long-term assets	3,415.2	3,233.2	Long-term assets increased in 2023 primarily due to capital expenditures on the Phase 3+ Expansion at Island Gold, partially offset by amortization.
Total assets	**$4,001.2**	**$3,674.2**	
Current liabilities	247.9	181.9	Current liabilities are higher than 2022, due to an increase in income tax payable in Mexico, and a higher share based payment liability driven by the increase in the Company's share price.
Non-current liabilities	829.8	771.2	Non-current liabilities are comprised of deferred taxes and decommissioning liabilities, and have increased as compared with the prior year due to an increase in the deferred tax liability driven by the strong operating performance across the Company's sites. Additionally the Company's non-current portion of the decommissioning liabilities increased by $16.1 million, net of accretion, compared to 2022, driven mainly by increased reclamation costs at the Mulatos District.
Total liabilities	1,077.7	953.1	
Shareholders' equity	2,923.5	2,721.1	The increase in Shareholders' equity was primarily driven by the earnings for the year.
Total liabilities and equity	**$4,001.2**	**$3,674.2**	

Liquidity and Capital Resources

The Company's strategy is based on achieving positive cash flow from operations to internally fund operating, capital and project development requirements, generate returns for its shareholders, and bolster the balance sheet. Material increases or decreases in the Company's liquidity and capital resources will be substantially determined by the success or failure of the Company's operations, exploration, and development programs, the ability to obtain equity or other sources of financing, the price of gold, and currency exchange rates.

As at December 31, 2023, the Company had cash and cash equivalents of $224.8 million and $13.0 million in equity securities, compared to $129.8 million and $18.6 million, respectively, at December 31, 2022. The Company has access to an undrawn

credit facility (the "Facility") of $500.0 million, not including the uncommitted $100.0 million accordion feature to increase the credit facility up to $600.0 million. The Facility bears interest at a rate of Adjusted Term SOFR Rate plus 1.875% on drawn amounts and stand-by fees of 0.42% on undrawn amounts. In February 2024, the Company extended the term of the revolving credit facility by one year to February 2028.

The Credit Facility is secured against all of the material present and future assets, property and undertakings of the Company. The Facility contains various covenants customary for a loan facility of this nature, including limits on indebtedness, asset sales and liens. It contains financial covenant tests that include (a) a minimum interest coverage ratio of 3.0:1.0 and (b) a maximum net leverage ratio of 3.5:1.0, both as defined in the agreement. As at December 31, 2023, the Company is in compliance with the covenants.

On May 31, 2023, the Company filed a Base Shelf Prospectus and accompanying Registration Statement, which qualifies the issuance of up to US$500,000,000 Securities of the Company, or any combination thereof, and is effective for a period of 25 months. The Company filed the Base Shelf Prospectus and Registration Statement to maintain financial flexibility but has no present intentions to undertake an offering of securities.

In the opinion of management, the Company's liquidity position of $724.8 million at December 31, 2023, comprised of cash and cash equivalents and availability under the credit facility, together with cash flows from operations, is sufficient to support the Company's normal operating requirements and capital commitments on an ongoing basis.

Cash Flow

(in millions)

	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022
Cash flow provided by operating activities	$124.1	$102.3	$472.7	$298.5
Cash flow used in investing activities	(109.8)	(84.9)	(351.8)	(312.7)
Cash flow used in financing activities	(5.6)	(5.0)	(26.0)	(28.4)
Effect of foreign exchange rates on cash	0.2	0.7	0.1	(0.1)
Net increase (decrease) in cash	8.9	13.1	95.0	(42.7)
Cash and cash equivalents, beginning of period	215.9	116.7	129.8	172.5
Cash and cash equivalents, end of period	$224.8	$129.8	$224.8	$129.8

Cash flow provided by operating activities

In the fourth quarter of 2023, operating activities generated cash flow of $124.1 million compared to $102.3 million in the same period of 2022, representing a 21% increase, due primarily to higher operating revenues and operating margin expansion. Cash flow provided by operations before working capital and taxes paid was $120.2 million in the fourth quarter compared to $109.3 million in the prior year period.

For the year ended December 31, 2023, operating activities generated record operating cash flows of $472.7 million compared to $298.5 million in the prior year driven by a 15% increase in ounces sold, and higher operating margins.

Cash flow used in investing activities

In the fourth quarter of 2023, capital expenditures of $109.7 million were higher than expenditures of $84.8 million in the prior year quarter, driven by the ramp up of spend at the Phase 3+ expansion at Island Gold in 2023.

For the year ended December 31, 2023, the Company invested $348.9 million in capital expenditures, compared to $313.7 million in the prior year. The increase was driven by higher capital expenditures at the Phase 3+ Expansion at Island Gold offset by lower capital spend at the Mulatos District following completion of construction of La Yaqui Grande in 2022.

Cash flow used in financing activities

During the fourth quarter, the Company declared a dividend of $0.025 per share, consistent with the first three quarters of 2023, bringing the year-to-date dividends paid to $39.4 million. Of this amount, $35.3 million was paid in cash and the remainder was issued in shares pursuant to the Company's dividend reinvestment plan. For the year ended December 31, 2023, the Company received proceeds from the exercise of stock options and warrants of $9.3 million.

Commitments

Contractual Obligations	Less than 1 year	2 - 3 years	4 - 5 years	More than 5 years	Total
Operating and financing leases	0.5	0.6	—	—	1.1
Accounts payable and accrued liabilities	195.0	—	—	—	195.0
Decommissioning liabilities	12.6	31.5	51.4	69.7	165.2
Capital commitments	87.5	32.7	—	—	120.2
	295.6	**64.8**	**51.4**	**69.7**	**481.5**

Contractual obligations exist with respect to royalties; however, gold production subject to royalty cannot be ascertained with certainty and the royalty rate varies with the gold price, therefore have been excluded from the table.

The Company has a number of mining service contracts that are based on variable measures, and not fixed payments. These contracts include measures such as tonnes mined, or metres developed. The expense relating to these variable payments and recognized as an operating expense was $104.2 million (year ended December 31, 2022 - $88.2 million). Total cash outflow for leases amount to $112.0 million for the year ended December 31, 2023 (2022 - payments of $96.1 million).

Outstanding Share Data

	February 21, 2024
Common shares	396,770,839
Stock options	2,766,377
Deferred share units	1,013,234

Restricted share units	1,911,738
	403,621,476

Related party transactions

There were no related party transactions during the period other than those disclosed in the Company's consolidated financial statements for the years ended December 31, 2023 and 2022.

Off-Balance Sheet Arrangements

The Company does not have any off-balance sheet arrangements.

Financial Instruments

The Company seeks to manage its exposure to fluctuations in commodity prices, fuel prices and foreign exchange rates by entering into derivative financial instruments from time to time.

Commodity option and forward contracts

As at December 31, 2023, the Company held option contracts to protect against the risk of a decrease in the value of the gold price on a portion of gold sales. These option contracts, totaling 69,750 ounces, ensure a minimum average realized gold price of $1,926 per ounce and a maximum average realized gold price of $2,356 per ounce, regardless of the movement in gold prices during 2024. The fair value of these contracts was a liability of $0.8 million at December 31, 2023 (December 31, 2022 - $0.1 million). The options mature monthly throughout 2024.

For the year ended December 31, 2023, the Company realized losses of $0.1 million related to the settlement of option contracts (for the year ended December 31, 2022- realized gains of $3.5 million). Total unrealized losses for the year ended December 31, 2023 was $0.9 million (for the year ended December 31, 2022 - unrealized losses of $0.3 million). The Company has elected to not apply hedge accounting to the gold option contracts, with changes in fair value recorded in net earnings.

Foreign currency contracts

As at December 31, 2023, the Company held option contracts to protect against the risk of an increase in the value of the Canadian dollar and Mexican peso versus the US dollar. These option contracts are for the purchase of local currencies and the sale of US dollars, which settle on a monthly basis, and are summarized as follows:

Canadian dollar contracts:

Period Covered	Contract type	Contracts (CAD$ Millions)	Average minimum rate (USD/CAD)	Average maximum rate (USD/CAD)
2024	Collars	504.0	1.33	1.39

Mexican Peso contracts:

Period Covered	Contract type	Contracts (MXN Millions)	Average minimum rate (MXN/USD)	Average maximum rate (MXN/USD)
2024	Collars	330.0	18.14	20.53
2024	Forwards	125.0	17.77	17.77

The fair value of these contracts was an asset of $6.6 million at December 31, 2023 (December 31, 2022 - liability of $4.3 million). For the year ended December 31, 2023, the Company realized net gains of $7.1 million on the foreign currency contracts (for the year ended December 31, 2022 - realized net losses of $1.1 million).

The Company enters into option contracts to hedge against the risk of an increase in the price of diesel fuel. These option contracts are for the purchase of New York Harbour Ultra Low Sulfur Diesel ("ULSD") contracts, which settle on a monthly basis, and the Company believes this is an appropriate manner of managing price risk.These collars totaling 1,512,000 gallons, ensure a minimum purchase call option of $2.71 per gallon and a maximum average sold put options of $2.50 per gallon, regardless of the movement in fuel prices during 2024.

The fair value of these contracts was a liability of $0.2 million at December 31, 2023 (December 31, 2022 - nil). For the for the year ended December 31, 2023 there was a net nil impact related to the settled fuel contracts (for the year ended December 31, 2022 - realized gains of $2.9 million).

Summary of Quarterly Financial and Operating Results

	Q4 2023	Q3 2023	Q2 2023	Q1 2023	Q4 2022	Q3 2022	Q2 2022	Q1 2022

[1] Refer to the "Non-GAAP Measures and Additional GAAP Measures" disclosure at the end of this MD&A for a description and calculation of these measures.

Production and gold sales increased significantly following commencement of commercial production at La Yaqui Grande in June 2022, which has contributed low cost production growth.

Earnings (loss) from operations and cash flow from operating activities have remained relatively strong since mid-2022 as a result of a higher realized gold price, increased gold ounce production following achievement of commercial production at La Yaqui Grande, and margin expansion as the Company has focused on cost containment strategies across operations and the corporate office, despite ongoing inflationary pressures. In the second and third quarters of 2022, the Company recorded a non-cash net realizable adjustment on the Mulatos heap leach inventory of $22.3 million and $11.6 million, respectively, which negatively impacted earnings from operations in those periods. The loss from operations in the first quarter of 2022 was driven by the non-cash impairment expense of $38.2 million ($26.7 million after tax) on the sale of the Esperanza Project.

Non-GAAP Measures and Additional GAAP Measures

The Company has included certain non-GAAP financial measures to supplement its Consolidated Financial Statements, which are presented in accordance with IFRS, including the following:

- adjusted net earnings and adjusted earnings per share;
- cash flow from operating activities before changes in working capital and taxes received;
- company-wide free cash flow;
- total mine-site free cash flow;
- mine-site free cash flow;
- total cash cost per ounce of gold sold;
- AISC per ounce of gold sold;
- Mine-site AISC per ounce of gold sold;
- sustaining and non-sustaining capital expenditures; and
- earnings before interest, taxes, depreciation, and amortization ("EBITDA")

The Company believes that these measures, together with measures determined in accordance with IFRS, provide investors with an improved ability to evaluate the underlying performance of the Company. Non-GAAP financial measures do not have any standardized meaning prescribed under IFRS, and therefore they may not be comparable to similar measures employed by other companies. The data is intended to provide additional information and should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. Management's determination of the components of non-GAAP and additional measures are evaluated on a periodic basis influenced by new items and transactions, a review of investor uses and new regulations as applicable. Any changes to the measures are dully noted and retrospectively applied as applicable.

Adjusted Net Earnings and Adjusted Earnings per Share

“Adjusted net earnings” and “adjusted earnings per share” are non-GAAP financial measures with no standard meaning under IFRS which exclude the following from net earnings (loss):

- Foreign exchange (gain) loss
- Items included in other loss
- Certain non-recurring items
- Foreign exchange (gain) loss recorded in deferred tax expense
- The income and mining tax impact of items included in other loss

Net earnings (loss) have been adjusted, including the associated tax impact, for the group of costs in “other loss” on the consolidated statement of comprehensive income. Transactions within this grouping are: the fair value changes on non-hedged derivatives; the renunciation of flow-through exploration expenditures; loss on disposal of assets; and Turkish Projects holding costs and arbitration costs. The adjusted entries are also impacted for tax to the extent that the underlying entries are impacted for tax in the unadjusted net earnings.

The Company uses adjusted net earnings for its own internal purposes. Management’s internal budgets and forecasts and public guidance do not reflect the items which have been excluded from the determination of adjusted net earnings. Consequently, the presentation of adjusted net earnings enables shareholders to better understand the underlying operating performance of the core mining business through the eyes of management. Management periodically evaluates the components of adjusted net earnings based on an internal assessment of performance measures that are useful for evaluating the operating performance of our business and a review of the non-GAAP measures used by mining industry analysts and other mining companies.

Adjusted net earnings is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures presented by other companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The measure is not necessarily indicative of operating profit or cash flows from operations as determined under IFRS. The following table reconciles this non-GAAP measure to the most directly comparable IFRS measure.

(in millions)

	Three Months Ended December 31,		Years Ended December 31,		
	2023	2022	2023	2022	2021
Net earnings (loss)	$47.1	$40.6	$210.0	$37.1	($66.7)

Other income and mining tax adjustments	(6.5)	(1.5)	(7.2)	(1.1)	—
Adjusted net earnings	$49.2	$33.7	$208.4	$107.9	$162.1
Adjusted earnings per share - basic	$0.12	$0.09	$0.53	$0.28	$0.41

Cash Flow from Operating Activities before Changes in Working Capital and Cash Taxes

"Cash flow from operating activities before changes in working capital and cash taxes" is a non-GAAP performance measure that could provide an indication of the Company's ability to generate cash flows from operations, and is calculated by adding back the change in working capital and taxes received to "Cash provided by (used in) operating activities" as presented on the Company's consolidated statements of cash flows. "Cash flow from operating activities before changes in working capital" is a non-GAAP financial measure with no standard meaning under IFRS.

The following table reconciles the non-GAAP measure to the consolidated statements of cash flows.

(in millions)

	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022
Cash flow from operating activities	$124.1	$102.3	$472.7	$298.5
Add: Changes in working capital and taxes paid	(3.9)	7.0	46.2	63.1
Cash flow from operating activities before changes in working capital and taxes paid	**$120.2**	**$109.3**	**$518.9**	**$361.6**

Company-wide Free Cash Flow

"Company-wide free cash flow" is a non-GAAP performance measure calculated from the consolidated operating cash flow, less consolidated mineral property, plant and equipment expenditures. The Company believes this to be a useful indicator of our ability to operate without reliance on additional borrowing or usage of existing cash company-wide. Company-wide free cash flow is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures of performance presented by other mining companies. Company-wide free cash flow should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

	2023	2022	2023	2022
Cash flow from operating activities	$124.1	$102.3	$472.7	$298.5
Less: mineral property, plant and equipment expenditures	(109.7)	(84.8)	(348.9)	(313.7)
Company-wide free cash flow	**$14.4**	**$17.5**	**$123.8**	**($15.2)**

Mine-site Free Cash Flow

"Mine-site free cash flow" is a non-GAAP financial performance measure calculated as cash flow from mine-site operating activities, less mineral property, plant and equipment expenditures. The Company believes this to be a useful indicator of our ability to operate without reliance on additional borrowing or usage of existing cash. Mine-site free cash flow is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures of performance presented by other mining companies. Mine-site free cash flow should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

Consolidated Mine-Side Free Cash Flow	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022
(in millions)				
Cash flow from operating activities	$124.1	$102.3	$472.7	$298.5
Add: operating cash flow used by non-mine site activity	10.6	15.7	49.5	48.3
Cash flow from operating mine-sites	**$134.7**	**$118.0**	**$522.2**	**$346.8**
Mineral property, plant and equipment expenditure	$109.7	$84.8	$348.9	$313.7
Less: capital expenditures from development projects, and corporate	(3.4)	($4.8)	(18.2)	(22.2)
Capital expenditure and capital advances from mine-sites	**$106.3**	**$80.0**	**$330.7**	**$291.5**
Total mine-site free cash flow	**$28.4**	**$38.0**	**$191.5**	**$55.3**

Mine-site free cash flow	**$27.4**	**$28.8**	**$142.1**	**($36.8)**

Total Cash Costs per ounce

Total cash costs per ounce is a non-GAAP term typically used by gold mining companies to assess the level of gross margin available to the Company by subtracting these costs from the unit price realized during the period. This non-GAAP term is also used to assess the ability of a mining company to generate cash flow from operations. Total cash costs per ounce includes mining and processing costs plus applicable royalties, and net of by-product revenue and net realizable value adjustments. Total cash costs per ounce is exclusive of exploration costs.

Total cash costs per ounce is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures presented by other mining companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS. The measure is not necessarily indicative of cash flow from operations under IFRS or operating costs presented under IFRS.

All-in Sustaining Costs per ounce and Mine-site All-in Sustaining Costs

The Company adopted an "all-in sustaining costs per ounce" non-GAAP performance measure in accordance with the World Gold Council published in June 2013. The Company believes the measure more fully defines the total costs associated with producing gold; however, this performance measure has no standardized meaning. Accordingly, there may be some variation in the method of computation of "all-in sustaining costs per ounce" as determined by the Company compared with other mining companies. In this context, "all-in sustaining costs per ounce" for the consolidated Company reflects total mining and processing costs, corporate and administrative costs, share-based compensation, exploration costs, sustaining capital, and other operating costs.

For the purposes of calculating "mine-site all-in sustaining costs" at the individual mine-sites, the Company does not include an allocation of corporate and administrative costs and share-based compensation, as detailed in the reconciliations below.

Sustaining capital expenditures are expenditures that do not increase annual gold ounce production at a mine site and excludes all expenditures at the Company's development projects as well as certain expenditures at the Company's operating sites that are deemed expansionary in nature. Non-sustaining capital expenditures are expenditures primarily incurred at development projects and costs related to major projects at existing operations, where the these projects will materially benefit the mine site. Capitalized exploration expenditures are expenditures that meet the IFRS definition for capitalization, and are incurred to further expand the known Mineral Reserve and Resource at existing operations or development projects. For each mine-site reconciliation, corporate and administrative costs, and non-site specific costs are not included in the all-in sustaining cost per ounce calculation.

All-in sustaining costs per gold ounce is intended to provide additional information only and does not have any standardized meaning under IFRS and may not be comparable to similar measures presented by other mining companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

The measure is not necessarily indicative of cash flow from operations under IFRS or operating costs presented under IFRS.

Total Cash Costs and All-in Sustaining Costs per Ounce Reconciliation Tables

The following tables reconciles these non-GAAP measures to the most directly comparable IFRS measures on a Company-wide and individual mine-site basis.

Total Cash Costs and AISC Reconciliation - Company-wide	Three Months Ended December 31,		Years Ended December 31,		
	2023	2022	2023	2022	2021
(in millions, except ounces and per ounce figures)					
Mining and processing	$113.4	$105.6	$437.3	$394.4	$351.5
Royalties	2.7	2.2	10.2	9.1	11.7

EBITDA

EBITDA represents net earnings before impairment charges, interest, taxes, depreciation, and amortization. EBITDA is an indicator of the Company's ability to generate liquidity by producing operating cash flow to fund working capital needs, service debt obligations, and fund capital expenditures.

EBITDA does not have any standardized meaning under IFRS and may not be comparable to similar measures presented by other mining companies. It should not be considered in isolation or as a substitute for measures of performance prepared in accordance with IFRS.

The following is a reconciliation of EBITDA to the consolidated financial statements:

(in millions)

	Three Months Ended December 31,		Years Ended December 31,	
	2023	2022	2023	2022
Net earnings	$47.1	$40.6	$210.0	$37.1
Add back:				
Inventory net realizable value adjustment	—	—	—	33.9
Impairment expense	—	—	—	38.2
Finance (income) expense	(0.2)	2.2	2.5	5.7
Amortization	50.6	45.6	190.2	171.5
Deferred income tax expense	4.6	2.7	31.0	54.6
Current income tax (recovery) expense	(0.5)	9.3	52.7	10.7
EBITDA	**$101.6**	**$100.4**	**$486.4**	**$351.7**

Additional GAAP Measures

Additional GAAP measures are presented on the face of the Company's consolidated statements of comprehensive income (loss) and are not meant to be a substitute for other subtotals or totals presented in accordance with IFRS, but rather should be evaluated in conjunction with such IFRS measures. The following additional GAAP measures are used and are intended to provide an indication of the Company's mine and operating performance:

- *Earnings from operations* - represents the amount of earnings before net finance income/expense, foreign exchange gain/loss, other income/loss, loss on redemption of senior secured notes and income tax expense

Accounting Estimates, Policies and Changes

Many of the amounts included in the consolidated financial statements require management to make estimates and judgements. Accounting estimates and assumptions are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Revisions to accounting estimates are recognized in the period in which the estimates are revised.

Accounting Policies and Changes

The Company's material accounting policies and future changes in accounting policies are presented in the consolidated financial statements for the year ended December 31, 2023 as described in note 3 of the audited consolidated financial statements. The Company adopted amendments to accounting standards that were effective January 1, 2023, and are described in note 4 of the audited consolidated financial statements.

Internal Control over Financial Reporting

Management is responsible for the design, implementation and operating effectiveness of internal control over financial reporting. Under the supervision of the Chief Executive Officer and Chief Financial Officer, management evaluated the design and effectiveness of the Company's internal control over financial reporting as of December 31, 2023. In making the assessment, management used the criteria set forth in Internal Control - Integrated Framework (2013), issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on a review of internal control procedures at the end of the period covered by this MD&A, management determined internal control over financial reporting was appropriately designed and operating effectively as at December 31, 2023.

KPMG LLP, an independent registered public accounting firm, has audited the effectiveness of the Company's internal control over financial reporting, and has expressed their opinion in their report included with our annual consolidated financial statements filed on SEDAR+ at www.sedarplus.ca and on EDGAR at www.sec.gov.

Changes in Internal Control over Financial Reporting

There were no material changes in the Company's internal control over financial reporting that occurred during the three months ended December 31, 2023 that have materially affected, or are reasonably likely to materially affect, the Company's internal control over financial reporting.

Disclosure Controls

Management is also responsible for the design and effectiveness of disclosure controls and procedures. The Company's Chief Executive Officer and Chief Financial Officer have each evaluated the effectiveness of the Company's disclosure controls and procedures as at December 31, 2023 and have concluded that these disclosure controls and procedures were appropriately designed and operating effectively as at December 31, 2023.

Limitations of Controls and Procedures

The Company's management, including the Chief Executive Officer and Chief Financial Officer, believe that internal controls over financial reporting and disclosure controls and procedures, no matter how well designed and operated, have inherent limitations. Therefore, even those systems determined to be properly designed and effective can provide only reasonable assurance that the objectives of the control system are met.

Risk Factors and Uncertainties

Risk Factors

The following is a discussion of risk factors relevant to the Company's operations and future financial performance. Additional risks not currently known by the Company, or that the Company currently deems immaterial, may also impair the Company's operations. You should carefully consider the risks and uncertainties described below as well as the other information contained and incorporated by reference in this MD&A.

The financing, exploration, development, and mining of any of the Company's properties are subject to a number of risk factors, including, among other things, the price of gold, laws and regulations, technical and geological risks inherent to mining operations, political conditions, currency fluctuations, and the ability to hire qualified people and to obtain necessary services in jurisdictions where the Company operates. Before deciding to invest in securities of the Company, investors should consider carefully such risks and uncertainties.

Commodity and Currency Risks

In recent years financial conditions have been characterized by volatility, which in turn has resulted in volatility in commodity prices and foreign exchange rates, significant inflation, tightening of the credit market, increased counterparty risk, and volatility in the prices of publicly traded entities. The volatility in commodity prices and foreign exchange rates directly impacts the Company's revenues, earnings, and cash flow.

The volatility of the price of gold and the price of other metals could have a negative impact on the Company's future operations.

The value of the Company's Mineral Resources and future operating profit and loss is significantly impacted by fluctuations in gold prices, over which the Company has no control. A reduction in the price of gold may prevent the Company's properties from being economically mined, reduce the Company's ability to generate cash flow to finance its operations and support development and expansion projects, or result in the write-off of assets whose value is impaired due to low gold prices. The price of gold may also have a significant influence on the market price of the Company's common shares. The price of gold is affected by numerous factors beyond the Company's control, such as the level of inflation, fluctuation of the United States dollar and foreign currencies, investment and physical demand, sale of gold by central banks, and the political and economic conditions of major gold producing countries throughout the world.

In addition to adversely affecting the Company's Mineral Reserve and Mineral Resource estimates and financial condition, declining metal prices can impact operations by requiring a reassessment of the feasibility of a particular project, and the Company may determine that it is not feasible to continue commercial production at some or all its current producing or development projects. Even if a project is ultimately determined to be economically viable, the need to conduct such a

reassessment may cause substantial delays and/or may interrupt operations until the reassessment can be completed, which may have a material adverse effect on the results of operations and financial condition.

The Company regularly engages in commodity hedging transactions intended to reduce the risk associated with fluctuations in commodity prices, however, there is no assurance that any such commodity-hedging transactions designed to reduce the risk associated with fluctuations in metal prices will be successful. The Company's hedging program may not protect adequately against declines in the price of the hedged metal. Furthermore, although hedging may protect the Company from a decline in the price of the metal being hedged, it may also prevent it from benefiting from price increases

The Company is subject to currency fluctuations that may adversely affect the financial position of the Company.

The Company is subject to currency risks. The Company's functional currency is the U.S. dollar, which is exposed to fluctuations against other currencies. The Company's mining operations are located in Canada and Mexico, with additional development-stage assets in Canada, the United States, Mexico, and Türkiye, and as such many of its expenditures and obligations are denominated in Canadian dollars, Mexican pesos, and to a lesser extent Turkish lira and Euros. The Company maintains its principal office in Toronto (Canada), maintains cash accounts in U.S. dollars, Canadian dollars, Mexican pesos, and Turkish lira, and has monetary assets and liabilities in U.S. dollars and Canadian dollars, Mexican pesos, and Turkish lira.

The Company's operating results and cash flow are significantly affected by changes in the U.S./Canadian dollar and U.S./Mexican peso exchange rates. Revenues are denominated in U.S. dollars, while most expenses are currently denominated in Canadian dollars and Mexican pesos. Exchange rate movements can therefore have a significant impact on most of the Company's costs. The appreciation of non-U.S. dollar currencies against the U.S. dollar can increase the costs of production at Alamos' mines, making these mines less profitable.

From time to time the Company may engage in foreign exchange hedging transactions intended to reduce the risk associated with fluctuations in foreign exchange rates, but there is no assurance that any such hedging transactions designed to reduce the risk associated with fluctuations in exchange rates will be successful and as such, operating costs and capital expenditures may be adversely impacted.

Financial, Finance and Tax Risks

The Company's activities expose it to a variety of financial risks including interest rate risk, credit risk, and liquidity risk. The Company's risk management program focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the Company's financial performance. The Company may use derivative financial instruments to hedge certain risk exposures. The Company does not purchase derivative financial instruments for speculative investment purposes.

The Company's revolving credit facility contains a number of restrictive covenants that impose significant operating and financial restrictions on the Company and may limit its ability to engage in acts that may be in the Company's long-term best interest.

If utilized, the Company's failure to comply with covenants in its revolving credit facility could result in an event of default which, if not cured or waived, could result in the acceleration of such debt. The restrictions include, without limitation, restrictions on its ability to:

- Incur additional indebtedness;
- Pay dividends or make other distributions or repurchase or redeem its capital stock;
- Prepay, redeem or repurchase certain debt;
- Make loans and investments;
- Sell, transfer or otherwise dispose of assets;
- Incur or permit to exist certain liens;
- Enter into certain transactions with affiliates;
- Enter into agreements restricting its subsidiaries' ability to pay dividends; and
- Consolidate, amalgamate, merge or sell all or substantially all of the Company's assets.

Liquidity Risks

Liquidity risk arises through the excess of financial obligations due over available financial assets at any point in time. The Company's objective in managing liquidity risk is to maintain sufficient readily available cash reserves and credit in order to meet its liquidity requirements at any point in time. The total cost and planned timing of acquisitions and/or other development or construction projects is not currently determinable, and it is not currently known whether the Company will require external financing in future periods.

The Company is subject to taxation in multiple jurisdictions and adverse changes to the taxation laws of such jurisdictions could have a material adverse effect on its profitability.

The Company has operations and conducts business in multiple jurisdictions and it is subject to the taxation laws of each such jurisdiction. These taxation laws are complicated and subject to change. The Company may also be subject to review, audit, and assessment in the ordinary course. Any such changes in taxation law or reviews and assessments could result in higher taxes

being payable or require payment of taxes due from previous years, which could adversely affect the Company's profitability. Taxes may also adversely affect the Company's ability to repatriate earnings and otherwise deploy its assets.

The Company may not be able to obtain the external financing necessary, including the issuance of shares, debt instruments or other securities convertible into shares, to continue its exploration and development activities on its mineral properties.

The ability of the Company to continue the exploration and development of its property interests will be dependent upon its ability to increase and rely on revenues from its existing production and planned expansions and potentially raise significant additional financing thereafter. The sources of external financing that the Company may use for these purposes may include project debt, corporate debt, or equity offerings. The Company cannot predict the potential need or size of future issuances of common shares or the issuance of debt instruments or other securities convertible into shares or the effect, if any, that this would have on the market price of the Company's common shares. Any transaction involving the issuance of shares, or securities convertible into shares, could result in dilution, possibly substantial, to present and prospective security holders. Further, there is no assurance that the financing alternative chosen by the Company will be available to the Company, on favourable terms or at all. Depending on the alternative chosen, the Company may have less control over the management of its projects. There is no assurance that the Company will successfully increase revenues from existing and expanded production. Should the Company not be able to obtain such financing and increase its revenues, it may become unable to acquire and retain its exploration properties and carry out exploration and development on such properties, and its title interests in such properties may be adversely affected or lost entirely.

Production, Mining and Operating Risks

The Company is, and expects to continue to be, dependent on three mines for all of its commercial production.

The Young-Davidson, Island Gold, and Mulatos Mines account for all of the Company's current commercial production and are expected to continue to account for all of its commercial production in the near term. Any adverse condition affecting mining, processing conditions, labour relations, supply chains, expansion plans, or ongoing permitting at Young-Davidson, Island Gold, or Mulatos could have a material adverse effect on the Company's financial performance and results of operations.

Forecasts of future production are estimates based on interpretation and assumptions and actual production may be less than estimated.

The Company prepares estimates of future production for its operating mines. The Company cannot give any assurance that it will achieve its production estimates. The failure of the Company to achieve its production estimates could have a material and adverse effect on future cash flows, share price, profitability, results of operations, and financial condition. These production estimates are dependent on, among other things, the accuracy of Mineral Reserve estimates, leach pad inventory, assumptions with respect to development and expansion activities, the accuracy of assumptions regarding ore grades and recovery rates, ground conditions, physical characteristics of ores, such as hardness and the presence or absence of particular metallurgical characteristics and the accuracy of estimated rates and costs of mining and processing.

The Company's actual production may vary from its estimates for a variety of reasons, including: actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors such as the need for sequential development of orebodies and the processing of new or different ore grades from those planned; mine failures, slope failures or equipment failures; industrial accidents; continued adverse impacts resulting from COVID-19, and the potential impacts of any new epidemic or pandemic which may develop; natural phenomena (including consequences of climate change) such as inclement weather conditions, floods, droughts, wildfires, rock slides and earthquakes; encountering unusual or unexpected geological conditions; changes in power costs and potential power shortages or permitting challenges related to power; lack of adequate housing for workers; shortages of principal supplies needed for operation, including explosives, fuels, chemical reagents, water, equipment parts and lubricants; labour shortages or strikes; civil disobedience and protests; and restrictions or regulations imposed by government agencies or other changes in the regulatory environments. Such occurrences could result in damage to mineral properties, interruptions or delays in production, injury or death to persons, damage, to property of the Company or others, monetary losses, and legal liabilities. These factors may cause a mineral deposit that has been mined profitably in the past to become unprofitable, forcing the Company to cease production. It is not unusual in new mining operations to experience unexpected problems during the start-up or expansion phase. Depending on the price of gold or other minerals, the Company may determine that it is impractical to commence or, if commenced, to continue commercial production at a particular site.

Mining operations and facilities are intensive users of electricity and carbon-based fuels. There can be no guarantee that the Company will be able to obtain all necessary permits or be able to enter into commercial arrangements for adequate electricity to conduct its future operations and expansion plans, including specifically the requirements for increased electricity capacity for any operational expansion at the Island Gold Mine. Energy prices can be affected by numerous factors beyond the Company's control, including global and regional supply and demand, political and economic conditions, and applicable regulatory regimes. The prices of various sources of energy may increase significantly from current levels. An increase in energy prices for which the Company is not hedged could materially adversely affect the results of operations and financial condition.

The Company's production costs are also affected by the prices of commodities consumed or used in operations, such as lime, cyanide, and explosives. The prices of such commodities are influenced by supply and demand trends affecting the mining industry in general and other factors outside the Company's control such as inflation and ongoing and/or future supply chain

challenges resulting from the COVID-19 pandemic. Increases in the price for materials consumed in mining and production activities could materially adversely affect the Company's results of operations and financial condition.

Risks and costs relating to development, ongoing construction and changes to existing mining operations and development projects.

The Company's ability to meet development and production schedules and cost estimates for its development and expansion projects cannot be assured. Changes in key operating and capital costs could result in unexpected costs or uneconomic operations and development projects. Many of these factors are beyond the Company's control. Without limiting the generality of the foregoing, the Company has commenced an expansion of its operations (including the installation of a shaft, paste plant, and expansion of the mill and tailings facility) at its Island Gold Mine, and is engaged in exploration and development activities at its Lynn Lake Gold project in Manitoba. As a result of availability of supply and increasing economic inflation, the Company may experience significant increases in the price of labour, consumables and other raw materials and related manufactured goods, including steel. The Company may also experience delays due to any ongoing or new impacts of COVID-19 or any other epidemic or pandemic which may occur in the future on personnel and contractor availability.

Technical considerations, stakeholder engagement challenges (including as it pertains to First Nations communities surrounding Island Gold and Lynn Lake) for the expansion and exploration projects there, delays in obtaining governmental approvals, inability to obtain financing, or other factors could cause delays in current mining operations or in developing properties. Such delays could materially affect the financial performance of the Company.

The Company prepares estimates of operating costs and/or capital costs for each operation and project. No assurance can be given that such estimates will be achieved. Failure to achieve cost estimates or material increases in costs could have an adverse impact on future cash flows, profitability, results of operations, and financial condition.

Development projects are uncertain, and it is possible that actual capital and operating costs and economic returns will differ significantly from those estimated for a project prior to production.

Alamos has a number of development-stage projects in Canada, Mexico, the United States, and Türkiye. Mine development projects require significant expenditures during the development phase before production is possible. Development projects are subject to the completion of successful feasibility studies and environmental assessments, issuance of necessary governmental licences and permits, availability of adequate financing, and, in the case of the Company's Turkish development stage projects, reaching an agreement with the Republic of Türkiye as to permitting, licensing and development. The economic feasibility of development projects is based on many factors such as estimation of Mineral Reserves, anticipated metallurgical recoveries, environmental considerations and permitting, future gold prices, and anticipated capital and operating costs of these projects. The Company's development projects have no operating history upon which to base estimates of future production and cash operating costs. Particularly for development projects, estimates of Proven and Probable Mineral Reserves and cash operating costs are, to a large extent, based upon the interpretation of geologic data obtained from drill holes and other sampling techniques, and feasibility studies that derive estimates of cash operating costs based upon anticipated tonnage and grades of ore to be mined and processed, the configuration of the ore body, expected recovery rates of gold from the ore, estimated operating costs, anticipated climatic conditions, and other factors. As a result, it is possible that actual capital and operating costs and economic returns will differ significantly from those currently estimated for a project prior to production.

Any of the following events, among others, could affect the profitability or economic feasibility of a project: unanticipated changes in grade and tonnes of ore to be mined and processed, unanticipated adverse geological conditions, unanticipated metallurgical recovery problems, incorrect data on which engineering assumptions are made, availability of labour, costs of processing and refining facilities, availability of economic sources of power, adequacy of water supply, availability of surface lands on which to locate processing and refining facilities, adequate access to the site, unanticipated transportation costs, government regulations and resource nationalism (including, but not limited to, regulations with respect to the environment, prices, royalties, duties, taxes, labour, permitting, restrictions on production, and quotas on exportation of minerals), fluctuations in gold prices, accidents, labour actions, and force majeure events.

It is not unusual in new mining operations to experience unexpected problems during the start-up phase, and delays can often occur at the start of production. It is likely that actual results for the Company's projects will differ from current estimates and assumptions, and these differences may be material. In addition, experience from actual mining or processing operations may identify new or unexpected conditions that could reduce production below, or increase capital or operating costs above, current estimates. If actual results are less favourable than currently estimated, the Company's business, results of operations, financial condition, and liquidity could be materially adversely affected.

The figures for the Company's Mineral Reserves and Mineral Resources are estimates based on interpretation and assumptions and may yield less mineral production under actual conditions than is currently estimated.

The Company must continually replace Mineral Reserves depleted by production to maintain production levels over the long term. Mineral Reserves can be replaced by expanding known orebodies, locating new deposits, or making acquisitions. Exploration is highly speculative in nature. Alamos' exploration projects involve many risks and are frequently unsuccessful. Once a site with mineralization is discovered, it may take several years from the initial phases of drilling until production is possible, during which time the economic feasibility of production may change.

The Company's Mineral Reserve and Mineral Resource estimates are estimates only and no assurance can be given that any particular level of recovery of gold or other minerals from Mineral Resources or Mineral Reserves will in fact be realized. There can also be no assurance that an identified mineral deposit will ever qualify as a commercially mineable (or viable) ore body that

can be economically exploited. Additionally, no assurance can be given that the anticipated tonnages and grades will be achieved or that the indicated level of recovery will be realized. These estimates may require adjustments or downward revisions based upon further exploration or development work or actual production experience.

Estimates of Mineral Resources and Mineral Reserves can also be affected by such factors as environmental permitting regulations and requirements, weather, environmental factors, unforeseen technical difficulties, unusual or unexpected geological formations, and work interruptions. In addition, the grade of ore ultimately mined may differ dramatically from that indicated by results of drilling, sampling, and other similar examinations. Short-term factors relating to Mineral Resources and Mineral Reserves, such as the need for the orderly development of ore bodies or the processing of new or different grades, may also have an adverse effect on mining operations and on the results of operations.

Material changes in Mineral Resources and Mineral Reserves, grades, stripping ratios, or recovery rates may affect the economic viability of projects. There is a risk that depletion of Mineral Reserves will not be offset by discoveries, acquisitions, or the conversion of Mineral Resources into Mineral Reserves. The Mineral Reserve base of Alamos' mines may decline if Mineral Reserves are mined without adequate replacement and the Company may not be able to sustain production beyond the current mine lives, based on current production rates.

Mineral Resources and Mineral Reserves are reported as general indicators of mine life. Mineral Resources and Mineral Reserves should not be interpreted as assurances of mine life or the profitability of current or future operations. There is a degree of uncertainty attributable to the calculation and estimation of Mineral Resources and Mineral Reserves and corresponding grades being mined or dedicated to future production. Until ore is actually mined and processed, Mineral Reserves and grades must be considered as estimates only.

In addition, the quantity of Mineral Resources and Mineral Reserves may vary depending on metal prices. Extended declines in market prices for gold, silver, and copper may render portions of the Company's mineralization uneconomic and result in reduced reported mineralization. Any material change in Mineral Resources and Mineral Reserves, grades, or stripping ratios may affect the economic viability of the Company's projects.

Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability. Mineral Resource estimates for properties that have not commenced production are based, in many instances, on limited and widely spaced drill hole information, which is not necessarily indicative of the conditions between and around drill holes. Accordingly, such Mineral Resource estimates may require revision as more drilling information becomes available or as actual production experience is gained. No assurance can be given that all or any part of Mineral Resources constitute or will be converted into Mineral Reserves.

Legal, Permitting, Regulatory, Title and Political Risks

The Company's operating and development properties are located in jurisdictions that are subject to changes in economic and political conditions and regulations in those countries.

The economics of the mining and extraction of precious metals are affected by many factors, including the costs of mining and processing operations, variations in grade of ore discovered or mined, fluctuations in metal prices, foreign exchange rates and the prices of goods and services, applicable laws and regulations, including regulations relating to royalties, allowable production and importing and exporting goods and services. Depending on the price of minerals, the Company may determine that it is neither profitable nor advisable to acquire or develop properties, or to continue mining activities.

The Company's mineral properties are located in Canada, Mexico, Türkiye, and the United States. Economic, legal, and political conditions in these countries could adversely affect the business activities of the Company. These conditions are beyond the Company's control, and there can be no assurances that any mitigating actions by the Company will be effective.

Changing laws, regulations, and restrictions relating to the mining industry or shifts in political conditions may increase the costs related to the Company's activities including the cost of maintaining its properties. Operations may also be affected to varying degrees by changes in government legislation and regulations with respect to restrictions on production, price controls, export controls, permitting, licensing, income taxes, royalties, expropriation of property, the environment (including specifically enacted legislation to address climate change), labour and mine safety. In 2021, the Mexican government announced restrictions and increased environmental reviews of the mining sector resulting in uncertainty with respect to the timing of regulatory approvals, overall permitting of future open-pit mines and a prohibition on the acquisition of new mining concessions. . In May 2023, the Mexican Congress approved a decree that amended the Mexican mining regulation, which allows the Mexican State to strongly control new mining activity in Mexico, increasing obligations and restrictions.

The effect of these factors cannot be accurately predicted. Economic instability could result from current global economic conditions and could contribute to currency volatility and potential increases in income tax rates, both of which could significantly impact the Company's profitability.

The Company's activities are subject to extensive laws and regulations governing worker health and safety, employment standards, waste disposal, protection of historic and archaeological sites, mine development, protection of endangered and protected species, and other matters. Regulators have broad authority to shut down and/or levy fines against facilities that do not comply with regulations or standards.

Risk factors specific to certain jurisdictions are described throughout, including specifically: "Risks related to development-stage assets in Türkiye and related Investment Treaty Arbitration", "Water Management at the Company's Mining operations", "Security in Mexico" and "The Company will be unable to undertake its required drilling and other development work on its properties if all

necessary permits and licences are not granted." The occurrence of the various factors and uncertainties related to economic and political risks of operating in the Company's jurisdictions cannot be accurately predicted and could have a material adverse effect on the Company's operations or profitability.

The Company will be unable to undertake its required drilling and other development work on its properties if all necessary permits and licenses are not granted.

The Company requires a number of approvals, licences, and permits for various aspects of its exploration, development and expansion. The Company is uncertain if all necessary permits will be maintained or obtained on acceptable terms or in a timely manner. Future changes in applicable laws and regulations or changes in their enforcement or regulatory interpretation could negatively impact current or planned exploration and development activities or any other projects with which the Company becomes involved. Any failure to comply with applicable laws and regulations or failure to obtain or maintain permits or licences, even if inadvertent, could result in the interruption of production, exploration or development, or material fines, penalties, or other liabilities. It remains uncertain if the Company's existing permits or licences may be affected in the future or if the Company will have difficulties in obtaining all necessary permits and licences that it requires for its proposed or existing mining activities.

In order to maintain mining operating and/or exploration licences in good standing, operating and/or exploration licence holders must advance their projects efficiently, including by obtaining the necessary permits prior to stipulated deadlines. The Company has implemented plans to obtain all necessary permits and licences prior to the relevant deadlines. While the Company is confident in its ability to meet all required deadlines or milestones so as to maintain its licences in good standing, there is a risk that the relevant permitting and licensing authorities will not respond in a timely manner. There is no guarantee that the Company will be able to obtain the approvals, licences and permits as planned or, if unable to meet such deadlines, that negotiations for an extension will be successful in maintaining its permits and licences in good standing.

Security in Mexico

In recent years, criminal activity and violence have increased and continue to increase in parts of Mexico. The mining sector has not been immune to the impact of criminal activity and violence, including in the form of kidnapping for ransom and extortion by organized crime, direct armed robberies of mining operations, and the theft and robbery of supply convoys, including specifically for diesel. In April 2020, the Company suffered an armed robbery at its Mulatos Mine. There were no injuries, and the value of the loss was ultimately recovered. Ore from operations at La Yaqui Grande is required to be transported by truck to Mulatos for processing, which requires the use of community roads leading to an increased risk of theft. The Company maintains insurance and takes measures to protect employees, property, and production facilities from these and other security risks. There can be no assurance, however, that security incidents will not occur in the future, or that if they do, they will not have a material adverse effect on the Company's operations.

Risk related to development stage assets inTürkiye and related Investment Treaty Arbitration

The Company indirectly through subsidiaries holds development stage mineral properties located in Türkiye. Economic and political conditions in Türkiye are adversely impacting the business activities of the Company. On October 14, 2019, the Company reported that it had suspended all construction activities at its Kirazlı Project in Türkiye pending the renewal of its mining operating licences which expired on October 13, 2019. On October 16, 2020, the Company received notice that the Turkish government would not be renewing the Company's Forestry Permits for the Kirazlı Project because the mining operating licence had not been restored within a one-year timeframe of its expiry. The Forestry Permits and mining operating licence, among other regulatory requirements, have not subsequently been restored and there is no guarantee that the Company will ever have the required licences and permits to operate in Türkiye.

On April 20, 2021, as a result of the Turkish government's actions in respect of the Company's projects in the Republic of Türkiye, the Company's wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A. and Alamos Gold Holdings B.V., announced the filing of a bilateral investment treaty claim (the "BIT Claim") against the Republic of Türkiye for expropriation and unfair and inequitable treatment, among other things. The BIT Claim was registered in June 2021 with the International Centre for Settlement of Investment Disputes (World Bank Group). As a result, the Company incurred an after-tax impairment charge of $213.8 million in the second quarter of 2021.

The BIT Claim may not be effective or successful. If unsuccessful, the Company's projects in Türkiye may be subject to resource nationalism and further expropriation; the Company may lose any remaining value of its assets and gold mining projects in Türkiye and its ability to operate in Türkiye or to put any of the Kirazli, Ağı Dağı or Çamyurt sites into production, resulting in the Company removing those three projects from its Total Mineral Reserves and Resources. If the BIT Claim is successful, there is no certainty as to the quantum or timing of any damages award or recovery of all, or any, legal costs. Any resumption of activities in Türkiye, or even retaining control of the Company's assets and gold mining projects in Türkiye can only result from reaching an agreement with the Turkish government. Other factors related to the Turkish economy, including but not limited to high rates of inflation and fluctuation in the Turkish Lira may also affect the Company's ability to effectively operate in Türkiye and could have a negative effect on overall anticipated project values.

Litigation could be brought against the Company and the resolution of current or future legal proceedings or disputes may have a material adverse effect on the Company's future cash flows, results of operations or financial condition.

The Company could be subject to legal claims and/or complaints and disputes that result in litigation, including unexpected environmental remediation costs, arising out of the normal course of business. The results of ongoing litigation cannot be predicted with certainty. The costs of defending and settling litigation can be significant, even for claims that Alamos believes

have no merit. There is a risk that if such claims are determined adversely to the Company, they could have a material adverse effect on the Company's financial performance, cash flow, and results of operations.

Some of the Company's mineral assets are located outside of Canada and are held indirectly through foreign affiliates.

It may be difficult, if not impossible, to enforce judgments obtained in Canadian courts predicated upon the civil liability provisions of the securities laws of certain provinces against the Company's assets that are located outside of Canada.

Failure of the Company to comply with laws and regulations could negatively impact current or planned mining activities and exploration and developmental activities.

The Company's mining, exploration, and development activities are subject to extensive laws and regulations concerning the environment, worker health and safety, employment standards, waste disposal, mine development, mine operation, mine closure, reclamation, and other matters. The Company requires permits and approvals from various regulatory authorities for many aspects of mine development, operation, closure, and reclamation. In addition to meeting the requirements necessary to obtain such permits and approvals, they may be invalidated if the applicable regulatory authority is legally challenged that it did not lawfully issue such permits and approvals. The ability of the Company to obtain and maintain permits and approvals and to successfully develop and operate mines may be adversely affected by real or perceived impacts associated with its activities that affect the environment and human health and safety at its development projects and operations and in the surrounding communities. The real or perceived impacts of the activities of other mining companies may also adversely affect the Company's ability to obtain and maintain permits and approvals. The Company is uncertain as to whether all necessary permits will be maintained on acceptable terms or in a timely manner. Future changes in applicable laws and regulations or changes in their enforcement or regulatory interpretation could negatively affect current or planned mining, exploration, and developmental activities on the projects in which the Company is or may become involved. Any failure to comply with applicable laws and regulations or to obtain or maintain permits, even if inadvertent, could result in the interruption of mining, exploration, and developmental operations or in material fines, penalties, clean-up costs, damages, and the loss of key permits or approvals. While the Company has taken great care to ensure full compliance with its legal obligations, there can be no assurance that the Company has been or will be in full compliance with all of these laws and regulations, or with all permits and approvals that it is required to have. Environmental and regulatory review has also become a long, complex, and uncertain process that can cause potentially significant delays.

The Company cannot guarantee that title to its properties will not be challenged.

The validity of the Company's mining claims and access rights can be uncertain and may be contested. Although the Company is satisfied it has taken reasonable measures to acquire the rights needed to undertake its operations and activities as currently conducted, some risk exists that some titles and access rights may be defective. No assurance can be given that such claims are not subject to prior unregistered agreements or interests or to undetected or other claims or interests which could be materially adverse to the Company. While the Company has used its best efforts to ensure title to all its properties and secured access to surface rights, these titles or rights may be disputed, which could result in costly litigation or disruption of operations. From time to time, a land possessor may dispute the Company's surface access rights and, as a result, the Company may be barred from its legal occupation rights. Surface access issues have the potential to result in the delay of planned exploration programs, and these delays may be significant. The Company expects that it will be able to resolve these issues, however, there can be no assurance that this will be the case.

Additional future property acquisitions, relocation benefits, legal and related costs may be material. The Company may need to enter into negotiations with landowners and other groups in the host communities where its projects are located in order to conduct future exploration and development work. The Company cannot currently determine the expected timing, outcome of such negotiations, or costs associated with the relocation of property owners and possessors and potential land acquisitions. There is no assurance that future discussions and negotiations will result in agreements with landowners or other local community groups so as to enable the Company to conduct exploration and development work on these projects.

The Company provides significant economic and social benefits to its host communities and countries, which facilitates broad stakeholder support for its operations and projects. There is no guarantee however that local residents will support our operations or projects.

Relationships with Key Stakeholders

Indigenous title claims, rights to consultation/accommodation, and the Company's relationship with local communities may affect the Company's existing operations and development projects.

Governments in many jurisdictions must consult with indigenous peoples and nations with respect to grants of mineral rights and the issuance or amendment of project authorizations. Consultation and other rights of indigenous peoples and nations may require accommodations, including undertakings regarding employment, training, business opportunities royalty payments, and other matters. This may affect the Company's ability to acquire, within a reasonable time frame, effective mineral titles in these jurisdictions, including in some parts of Canada, in which indigenous title is claimed, and may affect the timetable and costs of development of mineral properties or expansion of existing operations in these jurisdictions, including specifically with respect to the Company's Island Gold Mine Phase 3+ expansion and its Lynn Lake project. Under applicable environmental and related mine permitting legislation, both Canadian federal and provincial governments may require indigenous consultation requirements beyond the scope expected by the Company. The risk of unforeseen indigenous title claims could also affect existing operations as well as development projects. These legal requirements may also affect the Company's ability to expand or transfer existing operations or to develop new projects.

The Company's relationship with the communities in which it operates is critical to ensure the future success of its existing operations and the construction and development of its projects. There is an increasing level of public concern relating to the perceived effect of mining activities on the environment and on communities impacted by such activities. Adverse publicity relating to the mining industry generated by non-governmental organizations and others could have an adverse effect on the Company's reputation or financial condition and may impact its relationship with the communities in which it operates. While the Company is committed to operating in a socially responsible manner, there is no guarantee that the Company's efforts in this regard will mitigate this potential risk.

The inability of the Company to maintain positive relationships with local communities and indigenous First Nations, including specifically with respect to the Company's Canadian expansion or development-stage assets, may result in additional obstacles and timelines with respect to permitting, increased legal challenges, or other disruptive operational issues at any of the Company's operating mines, and could have a significant adverse impact on the Company's ability to generate cash flow, with a corresponding adverse impact to the Company's share price and financial condition.

Exploration, development and production at the Company's mining operations are dependent upon the efforts of its key personnel and its relations with its employees and any labor unions that represent employees.

The Company's success is heavily dependent on its key personnel and on the ability to motivate, retain and attract highly skilled employees.

Relations between the Company and its employees may be affected by changes in the scheme of labour relations that may be introduced by Mexican or Canadian governmental authorities in whose jurisdictions the Company carries on operations. Such changes include, but are not limited to, changes in labour laws, outsourcing laws, social security laws, and employment standards. Changes in such legislation or in the relationship between the Company and its employees may have a material adverse effect on the Company's business, results of operations, and financial condition. For example, April 2021, the

Mexican Congress approved a bill to amend various federal laws including the Federal Labour Law. This change, has for the most part, severely regulated the use of service companies in Mexico, a structure commonly used in the mining sector that provides outsourced labour and required companies like Alamos to hire its employees directly, resulting in a requirement to pay profit-sharing required by Mexican laws to those employees, or the obligation to contract only contractors registered before the Labour Authorities in Mexico that authorizes them to provide a specific service. Based on the Company's assessment, this change has not and is not expected to have a material impact on Alamos. Nonetheless, the risk exists that certain contractors could be deemed service companies, which could potentially have a significant financial impact. The full impact and enforcement of future changes are not known

In addition, the Company anticipates that as it expands its existing production and brings additional properties into production, and as the Company acquires additional mineral rights, the Company may experience significant growth in its operations. This growth may create new positions and responsibilities for management personnel and increase demands on its operating and financial systems, as well as require the hiring of a significant number of additional operations personnel. There can be no assurance that the Company will successfully meet these demands and effectively attract and retain any such additional qualified personnel. The failure to attract and retain such qualified personnel to manage growth effectively could have a material adverse effect on the Company's business, financial condition, or results of operations.

Companies today are at much greater risk of losing control over how they are perceived as a result of social media and other web-based applications.

Damage to the Company's reputation can be the result of the actual or perceived occurrence of any number of events and could include any negative publicity, whether true or not. Although the Company places a great emphasis on protecting its image and reputation, it does not ultimately have direct control over how it is perceived by others. Reputation loss, including specifically as a result of social media misinformation campaigns targeting the Company's development projects in Türkiye, may lead to increased and continued challenges in developing and maintaining community relations, decreased investor confidence, and act as an impediment to the Company's overall ability to advance its projects, thereby having a material adverse impact on financial performance, cash flows, and growth prospects.

The Company's directors and officers may have interests that conflict with the Company's interests.

Certain of the Company's directors and officers serve as directors or officers of other public companies and as such it is possible that a conflict may arise between their duties as the Company's directors or officers and their duties as directors or officers of these other companies.

Health and Environmental Risks

Alamos' operations may be exposed to serious illness.

Ongoing and any future impacts of COVID-19, along with any other potential serious illness, epidemic or pandemic, could have material adverse impacts on the Company's ability to operate and meet expected timelines for development and expansion projects (e.g., the Phase 3+ expansion project at the Island Gold mine) due to employee absences, disruption in supply chains, information technology system constraints, government interventions, market volatility, overall economic uncertainty and other factors currently unknown and not anticipated. Any such disruptions could potentially cause gold sales disruptions and could impact the ability to meet production, cost, and capital guidance. Alamos' operations are located in relatively remote areas. The

Company relies on various modes of transportation to house its employees, move around its people, its product, and the necessary supplies and inputs for its operations. At both Mulatos and Island Gold, the Company has a high concentration of personnel working and residing in close proximity to one another at the mine site (camps). Should an employee or visitor become infected with a serious illness that has the potential to spread rapidly, this could place Alamos' workforce at risk. The Company takes every precaution to strictly follow industrial hygiene and occupational health guidelines. Approximately 50% of the Island Gold workforce comes from the local communities with the other 50% housed in a camp within the town of Dubreuilville and operating on a fly-in, fly-out basis from various other regions. In 2020, the Company experienced several outbreaks of COVID-19 at its mining operations resulting in, among other things, temporary closure of mining operations. There were no closures in 2021, 2022 or 2023, however, there continues to be a risk that a virus outbreak could occur again at any operating sites or in the local community which could result in the temporary closure of the Company's operations. If any outbreaks occur, the government could order temporary suspensions requiring a shutdown of mining operations. Consequently, there can be no assurance that COVID-19 or another infectious illness will not materially impact Alamos' personnel and ultimately its operation, cash flows, or financial condition.

The Company's activities are subject to environmental laws and regulations that may increase its costs of doing business and restrict its operations.

The Company's exploration and production activities are subject to regulation by governmental agencies under various environmental laws. These laws address noise, air emissions, water discharges, waste management, management of hazardous substances, management of tailings facilities, protection of natural resources, antiquities and endangered species, and reclamation of lands disturbed by mining operations. Environmental legislation in many countries is evolving and the trend has been towards stricter standards and enforcement, increased fines, penalties, and potential for facilities to be shut-down for non-compliance, more stringent environmental assessments of proposed projects, and increasing responsibility for companies and their officers, directors, and employees. Compliance with environmental laws and regulations may require significant capital outlays on behalf of the Company and may cause material changes or delays in the Company's intended activities. There can be no assurance that future changes in environmental regulations will not adversely affect the Company's business, and it is possible that future changes in these laws or regulations could have a significant adverse impact on some portion of the Company's business, causing the Company to re-evaluate those activities at that time.

Failure to comply with such laws and regulations can have serious consequences, including damage to the Company's reputation, stopping the Company from proceeding with the development of a project, negatively impacting the operation or further development of a mine, increasing the cost of development or production and litigation and regulatory actions against the Company. The Company cannot give any assurance that, notwithstanding its precautions, breaches of environmental laws (whether inadvertent or not) or environmental pollution will not materially and adversely affect its financial condition and its results from operations. There is no assurance that future changes in environmental regulation, if any, will not adversely affect the Company's operations. Environmental hazards may exist on the properties on which the Company holds interests that are unknown to the Company at present and which have been caused by previous or existing owners or operators of the properties. The Company may also acquire properties with known or undiscovered environmental risks. Any indemnification from the entity from which the Company has acquired such properties may not be adequate to pay all the fines, penalties, and costs (such as clean-up and restoration costs) incurred related to such properties. Some of the Company's properties also have been used for mining and related operations for many years before acquisition and were acquired as is or with assumed environmental liabilities from previous owners or operators.

The Company's failure to comply with applicable laws, regulations, and permitting requirements may result in enforcement actions, including orders issued by regulatory or judicial authorities causing operations to cease or be curtailed, and may include corrective measures requiring capital expenditures, installation of additional equipment, or remedial actions. The Company may be required to compensate those suffering loss or damage by reason of its operations and may have civil or criminal fines or penalties imposed for violations of applicable laws or regulations.

Production at certain of the Company's mines involves the use of various chemicals, including cyanide, which is a toxic material. Should cyanide or other toxic chemicals leak or otherwise be discharged from the containment system, the Company may become subject to liability for cleanup work that may not be insured. While appropriate steps will be taken to prevent discharges of pollutants into the groundwater and the environment, the Company may become subject to liability for hazards that it may not be insured against and such liability could be material.

Actual costs of reclamation are uncertain, and higher than expected costs could negatively impact the results of operations and financial position.

Land reclamation requirements are generally imposed on mineral exploration companies (as well as companies with mining operations) in order to minimize the long-term effects of land disturbance, and the Company is subject to such requirements at its mineral properties. Decommissioning liabilities include requirements to control the dispersion of potentially deleterious effluents and to reasonably re-establish pre-disturbance landforms and vegetation.

In order to carry out reclamation obligations arising from exploration, potential development activities, and mining operations, the Company must allocate financial resources that might otherwise be spent on further exploration and development programs. Reclamation costs are uncertain and planned expenditures may differ from the actual expenditures required. If the Company is required to carry out unanticipated reclamation work, its financial position could be adversely affected.

Water management at the Company's mining operations

The water collection, treatment, and disposal operations at the Company's mines are subject to substantial regulation and involve significant environmental risks. If collection or management systems fail, overflow, or do not operate properly, untreated water or other contaminants could spill onto nearby properties or into nearby streams and rivers, causing damage to persons or property, injury to aquatic life, and economic damages.

Environmental and regulatory authorities in Mexico and Canada conduct periodic or annual inspections of the Young-Davidson, Island Gold, and Mulatos mines. As a result of these inspections, the Company is from time to time required to modify its water management program, complete additional monitoring work or take remedial actions with respect to the Company's operations as it pertains to water management.

Liabilities resulting from damage, regulatory orders or demands, or similar, could adversely and materially affect the Company's business, results of operations, and financial condition. Moreover, in the event that the Company is deemed liable for any damage caused by overflow, the Company's losses or consequences of regulatory action might not be covered by insurance policies.

Problems with water sources could have a negative impact on the Company's exploration programs and future operations.

The Company may not be able to secure the water necessary to conduct its activities as planned due to the potential for competing interests and demand for water, or due to the potential impact of drought and dry spells on water availability within local river basins, lakes, or aquifers. The Company will strive to ensure that its activities do not adversely impact the natural environment, community water sources and will seek to minimize freshwater withdrawals whenever possible. Future operations and activities may require that alternate water sources be provided to potentially affected communities at the Company's expense.

Climate Change Risks and Strategy

The Company's mining and processing operations are energy-intensive, resulting in a significant carbon footprint. The Company acknowledges climate change as an international and community concern and recognizes that its operations are subject to extensive transition and physical climate-related risks. As the Company adopts the recommendations of the Taskforce on Climate-related Financial Disclosure, it has expanded its disclosure beyond climate-related risks to also address climate governance, strategy, risk management, metrics, and targets.

Transition and Physical Climate-Related Risks

Transition risks are associated with society's transition to a low-carbon economy. These risks are highly uncertain and may have an adverse effect on Company operations. Alamos operates in Canada and Mexico where both countries are signatories to the Paris Agreement to limit the global average temperature rise below 2 degrees Celsius and pursue efforts to limit the increase to 1.5 degrees Celsius. Both Canada and Mexico have implemented regulations to monitor, report and/or reduce greenhouse gas ("GHG") emissions, and the costs required to comply are not anticipated to have a material adverse effect on the Company's operations. In Canada, Young-Davidson and Island Gold previously reported emissions under the Output-Based Pricing System ("OBPS") and effective January 1, 2022, transitioned to the Ontario Emissions Performance Standard ("EPS"). The EPS sets the price of excess emission units in lockstep with the federal backstop carbon price, which was CAD $65 per tonne of carbon dioxide equivalent ("CO_2e") in 2023 and is expected to increase to CAD $170 per tonne by 2030. Both Island Gold and Young-Davidson fall significantly below the emissions threshold for covered facilities under the EPS, though benefit by voluntarily opting in and avoiding the fuel charge component of the federal carbon pollution pricing system. The Company's planned Lynn Lake project in Northern Manitoba will be an open pit mine and once operational is expected to be a significant energy consumer and exceed the threshold for reporting under the OBPS. As such, the carbon price is a significant and growing financial risk. The life of mine carbon cost under the OBPS was initially estimated to be CAD $63 million, though the Company is actively assessing electrification opportunities that it anticipates will reduce the cost to approximately CAD $38 million.

In Mexico, a carbon tax applies to fossil fuels across all sectors at rates of approximately (for diesel) USD $3.31 per tonne of CO_2e. A carbon market pilot led by the Mexican Ministry of Environment and Natural Resources ("SEMARNAT") began in January 2020 and transitioned to an Emission Trading System ("ETS") in 2023 but it is not anticipated to affect the Mulatos Mine as the ETS targets facilities generating over 100,000 tonnes CO_2e per year from fixed sources. No carbon price has been established yet and the political uncertainty about future climate and energy policy is high. Costs to comply with current and future regulations are difficult to predict. Government requirements and regulations may be amended, become more stringent, or have other effects on the Company such as incremental increases in fuel prices, accelerating the adoption of lower-carbon technologies, and electrification. Difficulties in integrating new technologies with existing systems, such as electric mining equipment, or the cost and unproven nature of new technology could have a material adverse effect on the Company's financial performance and its operational results.

Physical risks are associated with the physical effects of climate change on the Company. Physical risks can be event-driven (acute) or longer-term shifts (chronic) in climate patterns. These risks are highly uncertain, are particular to the unique geographic circumstances associated with each site and may have an adverse effect on Company operations. The Company has qualitatively assessed the impact of climate risks on its operations and development projects, using climate scenarios to project changes to climate indicators under 2˚C and 4˚C scenarios. The Company identified several risks and opportunities based on projected increases in the frequency and intensity of warm spells, cold spells, heavy precipitation, storms, wildfires, floods, and drought that can each impact Company assets and result in disruptions to mine permitting, operations, ore extraction, and mine closure, or impact employee safety and the local environment. The Company assessed risks at its Island Gold, Young-

Davidson, and Mulatos mines, and one physical risk affecting the Mulatos Mine was determined to have a potential material financial impact on the Company. Mulatos is located in northwest Mexico where prolonged drought conditions are projected to increase, potentially affecting the availability of freshwater withdrawals for mining, processing, and refining activities in the dry season. In response, the Mulatos Mine is using existing water models to improve water management, updating engineering models to improve water efficiency, constructing a water treatment plant for La Yaqui Grande, and investigating options to reuse existing mine infrastructure as water reservoirs, which could increase the cost of treating water before and after use. While the Company has taken measures to mitigate the impact of weather on its operations, severe weather events and prolonged drought - particularly in northwest Mexico - could have an adverse impact on the Company's ability to achieve production forecasts.. In Q4 2023, Alamos began work to update its climate scenario analysis and risk assessment to further evaluate the effects of material risks/opportunities on Alamos' strategy and financial position, financial performance and cash flows over the short, medium and long-term. This exercise shall be completed in H1 2024.

Climate Change Governance

The Company's commitment to protecting and preserving land, air, water, and energy resources is stated in the Company's Sustainability Policy. The Technical and Sustainability Committee of the Board (the T&S Committee) provides oversight of climate change and climate-related impacts including GHG emissions, energy use, and water management. . In 2023, Alamos formalized its Climate Change Working Group, consisting of corporate representatives, mine site representatives, and development project representatives. The Working Group is tasked with ensuring implementation of the Company's Energy & Greenhouse Gas Management Standard, the deployment of Alamos' emissions reduction strategy, and the consistent measurement of energy use and GHG emissions across the Company. The Energy & Greenhouse Gas Management Standard informs the Company's actions to reduce emission intensity, energy-related costs and mitigate risks related to climate change, energy security, supply, and cost. Accountable persons at each Company site are responsible for implementing the Standard and helping the Company meet its climate-related objectives and targets. Energy and climate performance are reported on an annual basis and included in the Company's public Environmental, Social and Governance ("ESG") reporting.

In 2023 Alamos also established its Climate Change Steering Committee, which provides strategic guidance and builds consensus on the development of new climate-related guidelines. The Steering Committee is made up of members of Alamos' senior management team. Associated duties include reviewing the progress of the Climate Change Working Group in achieving Company goals. The Steering Committee communicates progress against goals and targets to the Board via the Technical and Sustainability Committee and Audit Committee three to four times per year.

Climate Change Risk Management

Alamos identifies and manages major risks, including significant climate-related risks, to the Company and its mine sites. The Enterprise Risk Management ("ERM") process provides senior management and the Board with updates on the key, material risks facing the Company along with details of the risk assessments and corresponding management plans. Climate-related risks are integrated into the Company's ERM process.

In 2020, the Company conducted an independent climate risk assessment to identify transition and physical risks affecting Company operations and development projects. Risks were determined by literature reviews, site interviews, peer reviews, and professional experience, and then analyzed based on future climate risk (i.e., the projected changes to climate-related factors impacting the system). Two climate scenarios were used: RCP8.5 to assess physical risks to Company sites, and the IEA Sustainable Development Scenario ("SDS") to assess transition risks to Company operations. A 20-year planning horizon was used (2030-2040), aligned with the current life of mine for Company assets and allowing for meaningful comparison of scenarios for transition and physical risks under a similar time horizon. Physical risk indicators included water stress, drought, cold and warm spells, precipitation, wind, temperature, wildfire, and floods. Transition risk indicators included GHG emission regulations, renewable electricity generation shares, cost of renewable energy, cost of abatement, cost of fuels, fossil fuel subsidies, and carbon reduction policies. Climate-related risks were validated with Company sites and management, including assessments on likelihood, consequence, risk rating, and the effectiveness of existing controls. Climate-related risks are integrated into site and corporate risk registers for integration within strategic planning and enterprise risk management and are periodically reviewed and assessed based on on-site changes and the availability of new, improved data.

In mid-2022, Alamos released its target to reduce absolute GHG emissions of 30% compared to its 2020/21 average base year. The Company developed an implementation roadmap to meet this target, with very specific projects identified and costed. In mid-2023, Alamos published its inaugural Climate Change Report that describes further our climate-related governance, strategy, risk management, metrics and targets to meet the requirements of the TCFD.

Insurance and Compliance Risks

The Company may not have sufficient insurance coverage.

The mining industry is subject to significant risks that could result in damage to, or destruction of, mineral properties or producing facilities, personal injury or death, environmental damage, delays in mining, monetary losses, and possible legal liability.

The Company's policies of insurance may not provide sufficient coverage for losses related to these or other risks. The Company's insurance does not cover all risks that may result in loss or damages and may not be adequate to reimburse the Company for all losses sustained. In particular, the Company does not have coverage for certain environmental losses or certain types of earthquake damage. The occurrence of losses or damage not covered by insurance could have a material and adverse effect on the Company's cash flows, results of operation, and financial condition.

The Company's business involves uninsurable risks.

In the course of exploration, development, and production of mineral properties, certain risks and, in particular, unexpected or unusual geological operating conditions including cave-ins, fires, flooding, and earthquakes may occur. It is not always possible to fully insure against such risks and the Company may decide not to take out insurance against such risks as a result of high premiums or other reasons. Should such liabilities arise, they could reduce or eliminate any future profitability and result in increased costs and a decline in the value of the securities of the Company.

The Company may fail to maintain the adequacy of internal control over financial reporting as per the requirements of the Sarbanes-Oxley Act of 2002 ("SOX").

The Company has documented and tested, during its most recent fiscal year, its internal control procedures in order to satisfy the requirements of Section 404 of SOX. Both SOX and Canadian legislation require an annual assessment by management of the effectiveness of the Company's internal control over financial reporting.

The Company may fail to maintain the adequacy of its internal control over financial reporting as such standards are modified, supplemented, or amended from time to time, and the Company may not be able to ensure that it can conclude on an ongoing basis that it has effective internal controls over financial reporting. The Company's failure to satisfy the requirements of Section 404 of SOX and equivalent Canadian legislation on an ongoing, timely basis could result in the loss of investor confidence in the reliability of its financial statements, which in turn could harm the Company's business and negatively impact the trading price of the Company's common shares or market value of its other securities. In addition, any failure to implement required new or improved controls, or difficulties encountered in their implementation, could harm the Company's operating results or cause it to fail to meet its reporting obligations.

The Company may be impacted by Anti-Bribery, Anti-Corruption and related business conduct laws.

The Canadian Corruption of Foreign Public Officials Act and the U.S. Foreign Corrupt Practices Act and anti-bribery and anti-corruption laws in other jurisdictions where the Company does business, prohibit companies and their intermediaries from making improper payments for the purposes of obtaining or retaining business or other commercial advantages. The Company's policies, including without limitation its Anti-Bribery, Anti-Corruption and Anti-Competition policy and its Code of Business Conduct and Ethics, mandate compliance with these laws, the failure of which often carry substantial penalties. The Company operates in jurisdictions that have experienced governmental and private sector corruption to some degree, and, in certain circumstances, strict compliance with laws may conflict with certain local customs and practices. There can be no assurances that the Company's internal control policies and procedures will always protect it from reckless or other inappropriate acts committed by the Company's affiliates, employees, or agents. Violations of these laws, or allegations of such violations, could have a material adverse effect on the Company's business, financial position, and results of operations.

Alamos' critical operating systems may be compromised.

Cyber threats, including fraud resulting from cyber threats, have evolved in severity, frequency, and sophistication in recent years, and target entities are no longer primarily from the financial or retail sectors. Individuals engaging in cybercrime may target corruption of systems or data or theft of sensitive data. While the Company invests in robust security systems to detect and block inappropriate or illegal access to its key systems, including supervisory control and data acquisition operating systems at its operations, and regularly reviews policies, procedures, and protocols to ensure data and system integrity, there can be no assurance that critical systems will not be inadvertently or intentionally breached and compromised. This may result in business interruption losses, equipment damage, or loss of critical or sensitive information.

Senior leadership briefs the Company's Audit Committee on information security matters at least once a year, and annual independent audits are conducted by the Company's auditors. Additional independent cyber-specific audits are undertaken on an as-needed basis, and the Company has retained a third party to provide 24x7 managed detection and response services across the Company's digital environment. A formal information security training and awareness program is compiled annually and executed in segments across the business.

Mining Industry Risks

The Company is in competition with other mining companies that have greater resources and experience.

The Company competes with other mining companies, many of which have greater resources and experience. Competition in the precious metals mining industry is primarily for mineral-rich properties which can be developed and produced economically; the technical expertise to find, develop, and produce such properties; the labour to operate the properties, and the capital for the purpose of financing development of such properties. Many competitors not only explore for and mine precious metals, but also conduct refining and marketing operations on a world-wide basis and some of these companies have much greater financial and technical resources than the Company. Such competition may result in the Company being unable to acquire desired properties, recruit or retain qualified employees or acquire the capital necessary to fund its operations and develop its properties. The Company's inability to successfully compete with other mining companies for these mineral deposits could have a material adverse effect on the Company's results of operations.

The Company may be unable to identify opportunities to grow its business or replace depleted Mineral Reserves, and it may be unsuccessful in integrating new businesses and assets that it may acquire in the future.

As part of the Company's business strategy, it has sought and will continue to seek new operating, development, and exploration opportunities in the mining industry. In pursuit of such opportunities, the Company may fail to select appropriate acquisition candidates or negotiate acceptable arrangements, including arrangements to finance acquisitions or integrate the acquired

businesses into its business. The Company cannot provide assurance that it can complete any acquisition or business arrangement that it pursues or is pursuing, on favourable terms, if at all, or that any acquisitions or business arrangements completed will ultimately benefit its business. Further, any acquisition the Company makes will require a significant amount of time and attention from its management, as well as resources that otherwise could be spent on the operation and development of its existing business.

Any future acquisitions would be accompanied by risks, such as a significant decline in the relevant metal price after the Company commits to complete an acquisition on certain terms; the quality of the mineral deposit acquired proving to be lower than expected; the difficulty of assimilating the operations and personnel of any acquired companies; the potential disruption of its ongoing business; the inability of management to realize anticipated synergies and maximize its financial and strategic position; the failure to maintain uniform standards, controls, procedures and policies; and the potential for unknown or unanticipated liabilities associated with acquired assets and businesses, including tax, environmental or other liabilities. There can be no assurance that any business or assets acquired in the future will prove to be profitable, that the Company will be able to integrate the acquired businesses or assets successfully or that the Company will identify all potential liabilities during the course of due diligence. Any of these factors could have a material adverse effect on its business, expansion, results of operations, and financial condition.

Mining is inherently dangerous and subject to conditions or events beyond the Company's control, which could have a material adverse effect on its business and which conditions and events may not be insurable.

Mining involves various types of risks and hazards, including, but not limited to:

- Geotechnical risks, including rock falls, pit wall failures, and cave-ins;
- Environmental hazards;
- Industrial accidents;
- Metallurgical and other processing problems;
- Unusual or unexpected rock formations;
- Seismic activity;
- Flooding;
- Fires;
- Periodic interruptions due to inclement or hazardous weather conditions;
- Variations in grade, deposit size, continuity, and other geological problems;
- Mechanical equipment performance problems;
- Unavailability of materials and equipment;
- Theft of equipment, supplies, and bullion;
- Labour force disruptions;
- Civil strife; and
- Unanticipated or significant changes in the costs of supplies.

Most of these risks are beyond the Company's control and could result in damage to, or destruction of, mineral properties, production facilities, or other properties; personal injury or death; loss of key employees; environmental damage; delays in mining; delays in production; increased production costs; monetary losses; and could impact the Company's share price and possible legal liability.

The business of exploration for minerals and mining involves a high degree of risk, as few properties that are explored are ultimately developed into producing mines.

The Company is engaged in exploration, mine development, and the mining and production of precious metals, primarily gold, and is exposed to a number of risks and uncertainties that are common to other companies in the same business. Unusual or unexpected ground movements, fires, power outages, labour disruptions, flooding, cave-ins, landslides, and the inability to obtain suitable adequate machinery, equipment or labour are risks involved in the operation of mines and the conduct of exploration programs. The Company has relied upon, and may continue to rely upon, consultants and others for mine operating and exploration expertise. Few properties that are explored are ultimately developed into producing mines. Substantial expenditures are required to establish Mineral Reserves through drilling, to develop metallurgical processes to extract the metal from the ore, and in the case of new properties, to develop the mining and processing facilities and infrastructure at any site chosen for mining. Although substantial benefits may be derived from the discovery of a major mineral deposit, the Company may not be able to raise sufficient funds for development. The economics of developing mineral properties is affected by many factors including the cost of operations, variations in the grade of ore mined, fluctuations in metal markets, costs of mining and processing equipment, and such other factors as government regulations, including regulations relating to royalties, allowable production, importing and exporting of minerals and environmental protection. Where expenditures on a property have not led to the discovery of Mineral Reserves, spent costs will not usually be recoverable.

The trading price of the Company's common shares may be subject to large fluctuations and may increase or decrease in response to a number of events and factors.

These factors may include, but are not limited to:

- The price of gold and other metals;
- The Company's operating performance and the performance of competitors and other similar companies;
- The public's reaction to the Company's press releases, other public announcements, and the Company's filings with the various securities regulatory authorities;
- Changes in earnings estimates or recommendations by research analysts who track the Company's common shares or the shares of other companies in the resource sector;
- Changes in general economic conditions;
- The arrival or departure of key personnel; and
- Acquisitions, strategic alliances, or joint ventures involving the Company or its competitors.

In addition, the market price of the Company's shares is affected by many variables not directly related to the Company's success and are therefore not within the Company's control, including other developments that affect the market for all resource sector shares, the breadth of the public market for the Company's shares, and the attractiveness of alternative investments. In addition, securities markets have recently experienced an extreme level of price and volume volatility, and the market price of securities of many companies has experienced wide fluctuations which have not necessarily been related to the operating performance, underlying asset values, or prospects of such companies. The effect of these and other factors on the market price of the common shares on the exchanges in which the Company trades has historically made the Company's share price volatile and suggests that the Company's share price will continue to be volatile in the future.

Cautionary Note to United States Investors

Measured, Indicated and Inferred Resources: All resource and reserve estimates included in this MD&A or documents referenced in this MD&A have been prepared in accordance with Canadian National Instrument 43-101 - Standards of Disclosure for Mineral Projects ("NI 43-101") and the Canadian Institute of Mining, Metallurgy and Petroleum (the "CIM") - CIM Definition Standards on Mineral Resources and Mineral Reserves, adopted by the CIM Council, as amended (the "CIM Standards"). NI 43-101 is a rule developed by the Canadian Securities Administrators, which established standards for all public disclosure an issuer makes of scientific and technical information concerning mineral projects. Mining disclosure in the United States was previously required to comply with SEC Industry Guide 7 ("SEC Industry Guide 7") under the United States Securities Exchange Act of 1934, as amended. The U.S. Securities and Exchange Commission (the "SEC") has adopted final rules, to replace SEC Industry Guide 7 with new mining disclosure rules under sub-part 1300 of Regulation S-K of the U.S. Securities Act ("Regulation S-K 1300") which became mandatory for U.S. reporting companies beginning with the first fiscal year commencing on or after January 1, 2021. Under Regulation S-K 1300, the SEC now recognizes estimates of "Measured Mineral Resources", "Indicated Mineral Resources" and "Inferred Mineral Resources". In addition, the SEC has amended its definitions of "Proven Mineral Reserves" and "Probable Mineral Reserves" to be substantially similar to international standards.

Investors are cautioned that while the above terms are "substantially similar" to CIM Definitions, there are differences in the definitions under Regulation S-K 1300 and the CIM Standards. Accordingly, there is no assurance any mineral reserves or mineral resources that the Company may report as "proven mineral reserves", "probable mineral reserves", "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under NI 43-101 would be the same had the Company prepared the mineral reserve or mineral resource estimates under the standards adopted under Regulation S-K 1300. U.S. investors are also cautioned that while the SEC recognizes "measured mineral resources", "indicated mineral resources" and "inferred mineral resources" under Regulation S-K 1300, investors should not assume that any part or all of the mineralization in these categories will ever be converted into a higher category of mineral resources or into mineral reserves. Mineralization described using these terms has a greater degree of uncertainty as to its existence and feasibility than mineralization that has been characterized as reserves. Accordingly, investors are cautioned not to assume that any measured mineral resources, indicated mineral resources, or inferred mineral resources that the Company reports are or will be economically or legally mineable.

International Financial Reporting Standards: The consolidated financial statements of the Company have been prepared by management in accordance with International Financial Reporting Standards, as issued by the International Accounting Standards Board (note 2 and 3 to the consolidated financial statements for the year ended December 31, 2023). These accounting principles differ in certain material respects from accounting principles generally accepted in the United States of America. The Company's reporting currency is the United States dollar unless otherwise noted.

Cautionary Note Regarding Forward-Looking Statements

This MD&A contains or incorporates by reference "forward-looking statements" and "forward-looking information" as defined under applicable Canadian and U.S. securities legislation. All statements, other than statements of historical fact, which address events, results, outcomes or developments that the Company expects to occur are, or may be deemed, to be, forward-looking statements and are based on expectations, estimates and projects as at the date of this MD&A. Forward-looking statements are generally, but not always, identified by the use of forward-looking terminology such as "expect", "assume", "believe", "anticipate", "intend", "objective", "estimate", "potential", "forecast", "budget", "target", "goal", "on track", "on pace", "outlook", "continue", "ongoing", "plan" or variations of such words and phrases and similar expressions or statements that certain actions, events or results "may", "could", "would", "might" or "will" be taken, occur or be achieved or the negative connotation of such terms.

Such statements include, but may not be limited to, guidance and expectations pertaining to: free cash flow, gold production, total cash costs, all-in sustaining costs, mine-site all-in sustaining costs, capital expenditures, total sustaining and growth capital, capitalized exploration, and future fluctuations in the Company's effective tax rate; achieving annual guidance;cash tax payments in Mexico; use of the Company's Base Shelf Prospectus; expected completion of the acquisition of Orford Mining Corporation by Alamos; increases to production, value of operation and decreases to costs resulting from intended completion of the Phase 3+ Expansion at Island Gold; intended infrastructure investments in, method of funding for, and timing of the completion of, the Phase 3+ Expansion; planned tailings lift at Island Gold and timing for completion; timing of construction decision for the Lynn Lake project;the expectation that the Lynn Lake project will be an attractive, low-cost long-life growth project in Canada with significant exploration upside; expenditures on the development of the Lynn Lake project; the effect of court and administrative proceedings in Manitoba on project timelines for the Lynn Lake project; exploration potential, budgets, focuses, programs, targets and projected exploration results; returns to stakeholders; gold prices; potential for further growth from PDA, a new development plan for PDA and the expected timing of its completion; mine life, including an anticipated mine life extension at Mulatos; Mineral Reserve life; Mineral Reserve and Resource grades; reserve and resource estimates; mining and milling rates; the Company's approach to reduction of its environmental footprint (including new initiatives and target reduction in greenhouse gas emissions), community relations and governance; management's opinion that the Company's liquidity position together with cash flow from operations is sufficient to support the Company's normal operating requirements and capital commitments on an ongoing basis as well as other general information as to strategy, plans or future financial or operating performance, such as the Company's expansion plans, project timelines, production plans and expected sustainable productivity increases, expected increases in mining activities and corresponding cost efficiencies, forecasted cash shortfalls and the Company's ability to fund them, cost estimates, sufficiency of working capital for future commitments and other statements that express management's expectations or estimates of future plans and performance.

Alamos cautions that forward-looking statements are necessarily based upon a number of factors and assumptions that, while considered reasonable by the Company at the time of making such statements, are inherently subject to significant business, economic, technical, legal, political and competitive uncertainties and contingencies. Known and unknown factors could cause actual results to differ materially from those projected in the forward-looking statements and undue reliance should not be placed on such statements and information.

Risk factors that may affect Alamos' ability to achieve the expectations set forth in the forward-looking statements in this document include, but are not limited to: changes to current estimates of mineral reserves and resources; changes to production estimates (which assume accuracy of projected ore grade, mining rates, recovery timing and recovery rate estimates which may be impacted by unscheduled maintenance, weather issues, labour and contractor availability and other operating or technical difficulties); operations may be exposed to new diseases, epidemics and pandemics, including any ongoing effects and potential further effects of COVID-19; the impact of COVID-19 or any other new illness, epidemic or pandemic on the broader market and the trading price of the Company's shares; provincial and federal orders or mandates (including with respect to mining operations generally or auxiliary businesses or services required for the Company's operations) in Canada, Mexico, the United States and Türkiye; the duration of any ongoing or new regulatory responses to COVID-19 or any other new illness, epidemic or pandemic; government and the Company's attempts to reduce the spread of any illness, epidemic or pandemic which may affect many aspects of the Company's operations including the ability to transport personnel to and from site, contractor and supply availability and the ability to sell or deliver gold doré bars; fluctuations in the price of gold or certain other commodities such as, diesel fuel, natural gas, and electricity; changes in foreign exchange rates (particularly the Canadian Dollar, Mexican peso, U.S. dollar and Turkish lira); the impact of inflation; changes in the Company's credit rating; any decision to declare a quarterly dividend; employee and community relations;not receiving the requisite approvals for completion of the transaction pursuant to which Alamos would acquire Orford Mining Corporation; litigation and administrative proceedings (including but not limited to the investment treaty claim announced on April 20, 2021 against the Republic of Türkiye by the Company's wholly-owned Netherlands subsidiaries, Alamos Gold Holdings Coöperatief U.A, and Alamos Gold Holdings B.V., the application for judicial review of the positive Decision Statement issued by the Department of Environment and Climate Change Canada commenced by the Mathias Colomb Cree Nation (MCCN) in respect of the Lynn Lake project and the MCCN's corresponding internal appeal of the Environment Act Licenses issued by the Province of Manitoba for the project); disruptions affecting operations; availability of and increased costs associated with mining inputs and labour; delays with the Phase 3+ expansion project at the Island Gold mine; court or other administrative decisions impacting the Company's approved Environmental Impact Study and/or issued project permits, construction decisions and any development of the Lynn Lake project; delays in the development or updating of mine plans; changes with respect to the intended method of accessing and mining the deposit at PDA and changes related to the

intended method of processing any ore from the deposit of PDA; the risk that the Company's mines may not perform as planned; uncertainty with the Company's ability to secure additional capital to execute its business plans; the speculative nature of mineral exploration and development, including the risks of obtaining and maintaining necessary licenses and permits, including the necessary licenses, permits, authorizations and/or approvals from the appropriate regulatory authorities for the Company's development stage and operating assets; labour and contractor availability (and being able to secure the same on favourable terms); contests over title to properties; expropriation or nationalization of property; inherent risks and hazards associated with mining and mineral processing including environmental hazards, industrial hazards, industrial accidents, unusual or unexpected formations, pressures and cave-ins; changes in national and local government legislation, controls or regulations in Canada, Mexico, Türkiye, the United States and other jurisdictions in which the Company does or may carry on business in the future; increased costs and risks related to the potential impact of climate change; failure to comply with environmental and health and safety laws and regulations; disruptions in the maintenance or provision of required infrastructure and information technology systems; risk of loss due to sabotage, protests and other civil disturbances; the impact of global liquidity and credit availability and the values of assets and liabilities based on projected future cash flows; risks arising from holding derivative instruments; and business opportunities that may be pursued by the Company. The litigation against the Republic of Türkiye, described above, results from the actions of the Turkish government in respect of the Company's projects in the Republic of Türkiye. Such litigation is a mitigation effort and may not be effective or successful. If unsuccessful, the Company's projects in Türkiye may be subject to resource nationalism and further expropriation; the Company may lose any remaining value of its assets and gold mining projects in Türkiye and its ability to operate in Türkiye. Even if the litigation is successful, there is no certainty as to the quantum of any damages award or recovery of all, or any, legal costs. Any resumption of activities in Türkiye, or even retaining control of its assets and gold mining projects in Türkiye can only result from agreement with the Turkish government. The investment treaty claim described in this MD&A may have an impact on foreign direct investment in the Republic of Türkiye which may result in changes to the Turkish economy, including but not limited to high rates of inflation and fluctuation of the Turkish Lira which may also affect the Company's relationship with the Turkish government, the Company's ability to effectively operate in Türkiye, and which may have a negative effect on overall anticipated project values.

Additional risk factors and details with respect to risk factors that may affect the Company's ability to achieve the expectations set forth in the forward-looking statements contained in this MD&A are set out in the Company's latest 40-F/Annual Information Form under the heading "Risk Factors", which is available on the SEDAR+ website at www.sedarplus.ca or on EDGAR at www.sec.gov. The foregoing should be reviewed in conjunction with the information, risk factors and assumptions found in this MD&A.

The Company disclaims any intention or obligation to update or revise any forward-looking statements whether as a result of new information, future events or otherwise, except as required by applicable law.

Qualified Persons

Chris Bostwick, FAusIMM, Alamos' Senior Vice President, Technical Services, who is a qualified person within the meaning of National Instrument 43-101 ("Qualified Person"), has reviewed and approved the scientific and technical information contained in this MD&A.

ALAMOS GOLD INC.

Financial Statements

(in United States dollars, unless otherwise stated)

For the years ended December 31, 2023 and 2022

MANAGEMENT'S RESPONSIBILITY FOR FINANCIAL REPORTING

The accompanying consolidated financial statements of Alamos Gold Inc. (the "Company") and the information in these annual consolidated financial statements are the responsibility of management and have been reviewed and approved by the Company's board of directors (the "Board of Directors"). The consolidated financial statements have been prepared by management in accordance with International Financial Reporting Standards as issued by the International Accounting Standards Board. In the preparation of these consolidated financial statements, estimates are sometimes necessary when transactions affecting the current accounting period cannot be finalized with certainty until future periods. Management believes that such estimates, which have been properly reflected in the accompanying consolidated financial statements, are based on the best estimates and judgements of management.

To discharge its responsibilities for financial reporting and safeguarding of assets, management depends on the Company's systems of internal control over financial reporting. These systems are designed to provide reasonable assurance that the financial records are reliable and form a proper basis for the timely and accurate preparation of the consolidated financial statements. The Chief Executive Officer and Chief Financial Officer have assessed and concluded on the design, implementation and operating effectiveness of internal control over financial reporting as at December 31, 2023.

The Board of Directors oversees management's responsibilities for the consolidated financial statements primarily through the activities of its Audit Committee, which is composed solely of directors who are neither officers nor employees of the Company. This Committee meets with management and the Company's independent auditors, KPMG LLP, to ensure that management properly fulfill its financial reporting responsibilities, review the consolidated financial statements, and recommend approval by the Board of Directors. The Audit Committee provides full and unrestricted access to the independent auditors, and also meets with the independent auditors without the presence of management, to discuss the scope and results of their audits, the adequacy of internal control over financial reporting, and the quality of financial reporting.

The consolidated financial statements have been audited by KPMG LLP (Auditor Firm ID:85), an independent registered public accounting firm, in accordance with the standards of the Public Company Accounting Oversight Board (United States).

Report of Independent Registered Public Accounting Firm

To the Shareholders and Board of Directors of Alamos Gold Inc.

Opinion on the Consolidated Financial Statements

We have audited the accompanying consolidated statements of financial position of Alamos Gold Inc. (the Company) as of December 31, 2023 and 2022, the related consolidated statements of comprehensive income, changes in equity, and cash flows for each of the years then ended, and the related notes (collectively, the consolidated financial statements). In our opinion, the consolidated financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2023 and 2022, and its financial performance and its cash flows for each of the years then ended, in conformity with International Financial Reporting Standards as issued by the International Accounting Standards Board.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of December 31, 2023, based on criteria established in *Internal Control – Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission, and our report dated February 21, 2024, expressed an unqualified opinion on the effectiveness of the Company's internal control over financial reporting.

Basis for Opinion

These consolidated financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the consolidated financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the consolidated financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the consolidated financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the consolidated financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matter

The critical audit matter communicated below is a matter arising from the current period audit of the consolidated financial statements that was communicated or required to be communicated to the audit committee and that: (1) relates to accounts or disclosures that are material to the consolidated financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of a critical audit matter does not alter in any way our opinion on the consolidated financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Evaluation of indicators of impairment or impairment reversal of mineral, property, plant and equipment of the Young-Davidson cash generating unit

As discussed in Note 3(f) and Note 5 to the consolidated financial statements, the Company reviews the carrying amounts of non-financial assets for impairment or impairment reversal at each reporting date, or whenever events or changes in circumstances indicate the carrying amounts may not be recoverable (or indicate that a previous impairment may have reversed). In making this determination, the Company considers both internal and external information to determine whether there is an indicator of impairment or impairment reversal and, accordingly, whether quantitative testing is required. The primary external factors considered are changes in forecast metal prices and the primary internal factors considered are current mine performance against expectations. As discussed in Note 8 to the consolidated financial statements, the carrying value of the Company's mineral property, plant and equipment balance was $3,360.1 million as of December 31, 2023, of which $1,500.3 million related to the Young-Davidson cash generating unit ("CGU").

We identified the evaluation of indicators of impairment or reversal of impairment of mineral property, plant and equipment of the Young-Davidson CGU as a critical audit matter. A high degree of auditor judgment was required to assess the Company's

© 2024 KPMG LLP, an Ontario limited liability partnership and a member firm of the KPMG global organization of independent member firms affiliated with KPMG International Limited, a private English company limited by guarantee. All rights reserved.

determination of whether internal and external factors, including the impact of estimated future gold prices and operational and financial performance, resulted in indicators of impairment or impairment reversal.

The following are the primary procedures we performed to address this critical audit matter. We evaluated the design and tested the operating effectiveness of certain internal controls over the Company's process to determine whether there is an indicator of impairment or impairment reversal. We compared the Company's operational and financial performance of the Young-Davidson CGU to approved budgets and the December 31, 2022 impairment analysis. We involved valuation professionals with specialized skills and industry knowledge, who assisted in evaluating the estimated future gold prices by comparing them to publicly available information.

Report of Independent Registered Public Accounting Firm

To the Shareholders and Board of Directors of Alamos Gold Inc.

Opinion on Internal Control Over Financial Reporting

We have audited Alamos Gold Inc.'s (the Company) internal control over financial reporting as of December 31, 2023, based on criteria established in *Internal Control – Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. In our opinion, the Company maintained, in all material respects, effective internal control over financial reporting as of December 31, 2023, based on criteria established in *Internal Control – Integrated Framework (2013)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We also have audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the consolidated statements of financial position of the Company as of December 31, 2023 and 2022, the related consolidated statements of comprehensive income, changes in equity and cash flows for each of the years in the two-year period ended December 31, 2023, and the related notes (collectively, the consolidated financial statements), and our report dated February 21, 2024 expressed an unqualified opinion on those consolidated financial statements.

Basis for Opinion

The Company's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, appearing under the heading Internal Control over Financial Reporting in Management's Discussion and Analysis for the year ended December 31, 2023. Our responsibility is to express an opinion on the Company's internal control over financial reporting based on our audit. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.
We conducted our audit in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audit of internal control over financial reporting included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, and testing and evaluating the design and operating effectiveness of internal control based on the assessed risk. Our audit also included performing such other procedures as we considered necessary in the circumstances. We believe that our audit provides a reasonable basis for our opinion.

Definition and Limitations of Internal Control Over Financial Reporting

A company's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

ALAMOS GOLD INC.
Notes to Consolidated Financial Statements
December 31, 2023 and 2022
(In United States dollars, unless otherwise indicated, tables stated in millions of United States dollars)

1. DESCRIPTION OF BUSINESS AND NATURE OF OPERATIONS

Alamos Gold Inc. ("Alamos"), a company incorporated under the Business Corporation Act (Ontario), and its wholly-owned subsidiaries (collectively the "Company"), is a publicly traded company with common shares listed on the Toronto Stock Exchange (TSX:AGI) and the New York Stock Exchange (NYSE: AGI). The Company's registered office is located at 181 Bay Street, Suite 3910, Toronto, Ontario, M5J 2T3.

Alamos is a Canadian-based intermediate gold producer engaged in the acquisition, exploration, development and extraction of precious metals, with diversified North American production from the Young-Davidson and the Island Gold mines in Northern Ontario, Canada and the Mulatos District in Sonora State, Mexico. Additionally, Alamos has several development projects, including the Phase 3+ Expansion at Island Gold, and the Lynn Lake project in Manitoba, Canada.

2. BASIS OF PREPARATION

These consolidated financial statements are prepared in accordance with International Financial Reporting Standards ("IFRS") as issued by the International Accounting Standards Board ("IASB") effective as of December 31, 2023. IFRS comprises IFRSs, International Accounting Standards ("IASs"), and interpretations issued by the IFRS Interpretations Committee ("IFRICs") and the former Standing Interpretations Committee ("SICs").

These consolidated financial statements have been prepared using the historical cost convention, other than those assets and liabilities that are measured at revalued amounts or fair values at the end of each reporting period and which are measured in accordance with the policies disclosed in note 3.

The consolidated financial statements were authorized for issue by the Board of Directors on February 21, 2024.

3. SUMMARY OF MATERIAL ACCOUNTING POLICIES

(a) Basis of consolidation

These consolidated financial statements include the accounts of the Company and its subsidiaries. Subsidiaries are entities controlled by the Company, and are wholly-owned. Control exists when the Company is exposed, or has rights, to variable returns from its involvement with the investee and has the ability to affect those returns through its power over the investee. Subsidiaries are included in the consolidated financial results of the Company from the effective date of acquisition up to the effective date of disposition or loss of control. The Company's principal properties and material subsidiaries of the Company and their geographic locations at December 31, 2023 were as follows:

Direct parent company	Country of incorporation	Mining properties and projects owned
Alamos Gold Inc	Canada	Island Gold Mine
		Young-Davidson Mine
		Lynn Lake project
Minas de Oro Nacional, S.A. de C.V.	Mexico	The Mulatos District
Dogu Biga Madencilik Sanayi Ticaret AS	Türkiye	Turkish properties

All intra-group transactions, balances, income and expenses are eliminated in full on consolidation.

(b) Foreign currency

These consolidated financial statements are presented in United States dollars (“US dollars”), which is the functional currency of the Company and all of its subsidiaries.

Transactions in currencies other than the Company's or a subsidiary's functional currency (“foreign currencies”) are recognized at the rates of exchange prevailing at the dates of the transactions. At the end of each reporting period, monetary assets and liabilities denominated in foreign currencies are translated at the rates prevailing at that date. Foreign currency non-monetary items that are measured in terms of historical cost are not retranslated.

Exchange differences are recognized in net earnings in the period in which they arise. Exchange differences on foreign deferred tax assets and liabilities are presented as deferred income tax expense on the Consolidated Statements of Comprehensive Income.

(c) Cash and cash equivalents

The Company considers deposits in banks, certificates of deposits, and short-term investments with original maturities of three months or less from the acquisition date as cash and cash equivalents.

(d) Inventories

Parts and supplies inventory

Supplies inventory consists of mining supplies and consumables used in the operation of the mines, and is valued at the lower of average cost and net realizable value. Provisions are recorded to reflect present intentions for the use of slow moving and obsolete parts and supplies inventory.

Stockpile inventory

Stockpiles represent ore that has been mined and is available for further processing. Stockpiles are measured by estimating the number of tonnes added and removed from the stockpile. Stockpile ore tonnages are verified by periodic surveys. Costs are allocated to stockpiles based on the current mining cost per tonne incurred up to the point of stockpiling the ore, including applicable overhead, depletion and amortization relating to mining operations, to the extent determined recoverable, and are removed at the average cost per tonne. Stockpile inventory is measured at the lower of cost and net realizable value.

In-process inventory

The recovery of gold is achieved through milling and heap leaching processes. Costs are added to ore on leach pads and in the mill based on the current stockpiled mining cost and current processing cost, including applicable overhead, depletion and amortization relating to processing operations. Costs are removed from ore on leach pads and in the mill as ounces are recovered, based on the average cost per recoverable ounce of gold in-process inventory. In-process inventory is measured at the lower of cost and net realizable value.

Finished goods inventory

Finished goods inventory consists of dore bars containing predominantly gold by value which are generally refined off-site to return saleable metals. Dore inventory is valued at the lower of weighted average cost and net realizable value.

For all classes of gold inventory, net realizable value is calculated as the difference between the estimated future metal revenue based on prevailing and/or long-term metal prices as appropriate, and estimated costs to complete production into a saleable form.

(e) Long-lived assets

Mineral property, plant and equipment

Mineral property, plant and equipment is recorded at cost less accumulated amortization and accumulated impairment losses. The initial cost of an asset is comprised of its purchase price or construction cost, any costs directly attributable to bringing the asset into operation, and the initial estimate of any reclamation obligation. The purchase price is the fair value of consideration given to acquire the asset. The value of right-of-use assets are also included within property, plant and equipment. Subsequent costs are included in the asset's carrying amount when it is probable that future economic benefits associated with the asset will flow to the Company, and the costs can be measured reliably. This would include costs related to the refurbishment or replacement of major components of an asset, when the refurbishment results in a significant extension in the physical life of the component. All other repairs and maintenance costs are recognized in net earnings as incurred.

The cost of property, plant and equipment, less any applicable residual value, is allocated over the estimated useful life of the asset on a straight-line basis, or on a unit-of-production basis if that method is more reflective of the allocation of benefits among periods. Amortization commences on an asset when it has been fully commissioned and is available for use. Amortization rates applicable to each category of property, plant and equipment, with the exception of land, are as follows:

Asset	Useful life
Leasehold improvements	Lease term
Mobile equipment	2-10 years
Other equipment	2-20 years
Processing plant	Unit-of-production
Shaft, underground infrastructure and mineral properties	Unit-of-production
Vehicles	3-7 years
Buildings	7-20 years
Office equipment	2-8 years

When components of an item of property, plant and equipment have different useful lives than those noted above, they are accounted for as separate items of property, plant and equipment. Each asset or component's estimated useful life is determined considering its physical life limitations; however, this physical life cannot exceed the remaining life of the mine at which the asset is utilized. Estimates of remaining useful lives and residual values are reviewed annually and when events and circumstances indicate that such a review should be made. Any changes in estimates of useful lives are accounted for prospectively from the date of the change.

Acquisitions:

The purchase consideration of the acquisition of a mining property determined to be an asset acquisition is allocated to the individual assets acquired and liabilities assumed based on their relative fair values.

Exploration and evaluation expenditures

Expenditures incurred prior to the Company obtaining the right to explore are expensed in the period in which they are incurred.

Exploration and evaluation expenditures include costs such as exploratory drilling, sample testing, and costs of pre-feasibility and other technical studies. Exploratory drilling and other exploration costs incurred on sites without an existing mine and on areas outside the boundary of a known mineral deposit which contain proven and probable reserves and resources of which there is sufficient geologic certainty of converting a mineral deposit into a proven and probable reserve, are expensed. Evaluation expenditures related to activities located within the boundary of a known mineral deposit as described above are capitalized and included in the carrying amount of the related mining property. Management uses the following criteria in its assessment of the boundary of the known mineral deposit: (i) geology: there is sufficient geologic certainty of converting a mineral deposit into a proven and probable reserve. There is a history of conversion to reserves at operating mines; (ii) scoping, pre-feasibility or feasibility: there is a scoping study, pre-feasibility or preliminary feasibility study that demonstrates the additional reserves and resources will generate a positive commercial outcome. Known metallurgy provides a basis for concluding there is a significant likelihood of being able to recover the incremental costs of extraction and production; (iii) accessible facilities: the mineral deposit can be processed economically at accessible mining and processing facilities where applicable; (iv) life of mine plans: an overall life of mine plan and economic model to support the economic extraction of reserves and resources exists. A long-term life of mine plan and supporting geological model identifies the drilling and related development work required to expand or further define the existing ore body; and (v) authorizations: operating permits and feasible environmental programs exist or are obtainable. All capitalized exploration and evaluation assets are monitored for indications of impairment, to ensure that

exploration activities related to the property are continuing and/or planned for the future. If an exploration property does not prove viable, an impairment loss is recognized in net earnings as the excess of the carrying amount over the recoverable amount (refer to note 3(f) for definition of recoverable amount) in the period in which that determination is made.

Capitalized exploration and evaluation assets are subsequently reclassified to mine development costs upon determining that the technical feasibility and commercial viability of extracting a mineral resource are demonstrable and the Board of Directors has approved project advancement. The Company performs an impairment test, based on the recoverable amount, prior to the reclassification of exploration and evaluation assets to mine development costs.

Mining interests and mine development costs

The Company may hold interests in mineral properties in various forms, including prospecting licenses, exploration and exploitation concessions, mineral leases and surface rights. The Company capitalizes payments made in the process of acquiring legal title to these properties.

Property acquisition and mine development costs are recorded at cost. Mine development costs incurred to expand operating capacity, develop new ore bodies or develop mine areas in advance of current production are capitalized. Mine development costs related to current period production are recorded in inventory. Borrowing costs for qualifying assets are capitalized to mine development costs while construction and development activities at the property are in progress. Items may be produced while bringing an item of property, plant and equipment to the location and condition necessary for it to be capable of operating in the manner intended by management (such as samples produced when testing whether the asset is functioning properly). An entity recognizes the proceeds from selling any such items, and the cost of those items, in profit or loss in accordance with applicable Standards.

Subsequent to the commencement of commercial production, further development expenditures incurred with respect to a mining interest are capitalized as part of the mining interest, when it is probable that additional future economic benefits associated with the expenditure will flow to the Company. Otherwise, such expenditures are classified as mining and processing costs.

Once the asset is capable of operating as management has intended, mining interests are depleted over the life of the mine using the unit-of-production method based on estimated proven and probable mineral reserves of the mine and the portion of mineralization from measured, indicated and inferred mineral resources expected to be classified as mineral reserves, in applicable mines. The Company determines the portion of mineralization expected to be classified as mineral reserves by considering the degree of confidence in the economic extraction of the resource, which is affected by long-term metal price assumptions, cut-off grade assumptions, and drilling results. These assessments are made on a mine-by-mine basis.

The expected reserves used in depletion calculations are determined based on the facts and circumstances associated with the mining interest. Any changes in estimates of reserves are accounted for prospectively from the date of the change.

Capitalized stripping costs

Pre-production stripping costs are capitalized as part of the cost of constructing a mine.

Mining costs associated with stripping activities during the production phase of a mine are capitalized only if the Company can identify the component of the ore body for which access is obtained, the costs associated with the related stripping activities can be measured reliably, and the activities represent a future benefit to the mining interest, in that access is gained to sources of mineral reserves and resources that will be produced in future periods that would otherwise not have been accessible. Production stripping costs are allocated between inventory and capital based on the expected volume of waste extracted for a given volume of ore production. The expected volume of waste to be allocated to inventory is determined with reference to the life of mine stripping ratio of a particular mine or deposit, with the remaining amount allocated to capital. The amount of waste capitalized is calculated by multiplying the stripping tonnes mined during the period by the current mining cost per tonne in the open pit.

Capitalized stripping costs are depleted over the expected mineral reserves and resources benefiting from the stripping activity using the unit-of-production method based on estimated proven and probable mineral reserves, and the portion of mineralization expected to be classified as mineral reserves.

Investment tax credits

Investment tax credits are earned as a result of incurring eligible exploration and development expenses prior to commercial production. Investment tax credits are accounted for as a reduction to property, plant and equipment or mining interests.

Investment tax credits also arise as a result of incurring eligible research and development expenses and these credits are recorded as a reduction to the related expenses.

Derecognition

Upon replacement of a major component, or upon disposal or abandonment of a long-lived asset, the carrying amounts of the assets are derecognized with any associated gains or losses recognized in the Consolidated Statements of Comprehensive Income.

(f) Impairment of non-financial assets

The carrying amounts of non-financial assets, excluding inventories and deferred income tax assets, are reviewed for impairment (or impairment reversal) at each reporting date, or whenever events or changes in circumstances indicate the carrying amounts may not be recoverable (or indicate that a previous impairment may have reversed). In making this determination, the Company considers both internal and external information, in accordance with IAS 36, *Impairment of Assets,* to determine whether there is an indicator of impairment or impairment reversal and, accordingly, whether quantitative testing is required. Reviews are undertaken on an asset-by-asset basis, except where the recoverable amount for an individual asset cannot be determined, in which case the review is undertaken at the Cash Generating Unit ("CGU") level.

If the carrying amount of a CGU or non-financial asset exceeds the recoverable amount, being the higher of its fair value less costs of disposal and its value-in-use, an impairment expense is recognized as the excess of the carrying amount over the recoverable amount. With respect to CGUs, impairment losses are allocated first to reduce the carrying amount of any goodwill allocated to the CGUs, if any, and then to reduce the carrying amounts of the other assets in the CGU on a pro-rata basis.

Where the recoverable amount is assessed using discounted cash flow techniques, the estimates are based on detailed mine or production plans. The mine plan is the basis for forecasting production output in each future year and for forecasting production costs. For value-in-use calculations, production costs and output in the mine plan may be revised to reflect the continued use of the asset in its present form.

Non-financial assets that have previously been impaired are tested for a possible reversal of the impairment whenever events or changes in circumstances indicate that the impairment may have reversed, or may have partially reversed. In these instances, the impairment loss is reversed to the recoverable amount but not beyond the carrying amount, net of amortization, that would have arisen if the prior impairment loss had not been recognized. Goodwill impairments are not reversed.

(g) Provisions

Provisions are recognized when the Company has a present obligation (legal or constructive), as a result of past events, and it is probable that an outflow of resources that can be reliably estimated will be required to settle the obligation. Provisions are measured at the present value of the expenditures expected to be required to settle the obligation using a pre-tax rate that reflects current market assessments of the time value of money and the risks specific to the obligation.

Decommissioning liabilities

The Company's mining and exploration activities are subject to various governmental laws and regulations relating to the protection of the environment. These environmental regulations are continually changing, and the Company has made, and intends to make in the future, expenditures to comply with such laws and regulations. The timing of these expenditures is dependent upon a number of factors including the life of the mine, the operating license conditions, and the laws, regulations, and environment in which the mine operates.

Decommissioning liabilities are recognized at the time an environmental disturbance occurs and are measured at the Company's best estimate of the expected future cash flows required to reclaim the disturbance for each mine operation, which are adjusted to reflect inflation, and discounted to their present value. The inflation rate used is determined based on external forecasts for inflation in the country in which the related mine operates. Expected future cash flows reflect the risks and probabilities that alternative estimates of cash flows could be required to settle the obligation. The discount rate used is a pre-tax rate that reflects current market assessments of the time value of money specific to the currency in which the cash flows are expected to be paid. The discount rate does not reflect risks for which the cash flows have been adjusted. Significant estimates are involved in forming expectations of future activities and the amount and timing of the associated cash flows. Those expectations are based on existing environmental and regulatory requirements or, if more stringent, Company policies that give rise to a constructive obligation.

Upon initial recognition of a decommissioning liability, the corresponding cost is capitalized as an asset, representing part of the cost of acquiring the future economic benefits of the operation. The capitalized cost is recognized in mineral property and amortized in accordance with the Company's policy for the related asset.

The provision is progressively increased over the life of the operation as the effect of discounting unwinds, creating an expense included in finance expense on the Consolidated Statements of Comprehensive Income.

Decommissioning liabilities are adjusted for changes in estimates. Such adjustments, which are not the result of the current production of inventory, are accounted for as a change in the corresponding capitalized cost, except where a reduction in the provision is greater than the unamortized capitalized cost of the related assets. In instances where the capitalized cost of the related assets is nil, or will be reduced to nil, the remaining adjustment is recognized in net earnings. If reclamation and restoration costs are incurred as a consequence of the production of inventory, the costs are recognized as a cost of that inventory. Factors influencing such changes in estimates include revisions to estimated reserves, resources and lives of mines; developments in technologies; regulatory requirements and environmental management strategies; changes in estimated costs of anticipated activities, including the effects of inflation; and movements in interest rates affecting the discount rate applied.

(h) Revenue recognition

Revenue from the sale of gold, including refined metal, and dore, is recognized when control over the metal is transferred to the customer. Transfer of control generally occurs when title has passed to the customer, the customer has assumed the significant risks and rewards of ownership of the asset and the Company has the right to payment for the delivery of the refined metal, or dore. On transfer of control, revenue and related costs can be measured reliably and it is probable that the economic benefits associated with the transaction will flow to the Company as payment is received on the date of or within a few days of transfer of control.

(i) Earnings per share

Basic earnings per share is calculated based on the weighted average number of common shares and common share equivalents outstanding for the period. Diluted earnings per share is calculated using the treasury method, except when assessing the dilution impact equity-settled restricted share units, and performance shares units, where the if converted method is used. The treasury method assumes that outstanding stock options with an average exercise price below the market price of the underlying shares, are exercised and the assumed proceeds are used to repurchase common shares of the Company at the average market price of the common shares for the period. The if converted method assumes that all equity settled restricted share units, and performance share units have been converted in determining fully diluted loss per share, except where such conversion would be antidilutive.

(j) Share-based compensation

The Company measures all equity-settled share-based awards made to employees and others providing similar services (collectively, “employees”) based on the fair value of the options or units on the date of grant.

The grant date fair value of options is estimated using an option pricing model and is recognized as compensation expense over the vesting period, based on the number of options that are expected to vest. A corresponding increase is recognized in equity. The grant date fair values of the Company’s equity-settled performance share units, and restricted share units are determined using an option pricing model and are recognized as compensation expense over the vesting period.

The Company awards cash-settled share-based compensation to directors and employees in the form of deferred share units and restricted share units. In accounting for these awards, the Company recognizes the fair value of the amount payable to employees, using the Black-Scholes option pricing model for certain units, as they are earned based on the estimated number of units that are expected to vest. Based on the plan, some units are initially measured at fair value and recognized as an obligation at the grant date using the Company's share price. The corresponding liability is re-measured at fair value on each reporting date and upon settlement, with changes in fair value recognized in Comprehensive Income for the period. The fair value of deferred share units and restricted share units is determined by reference to the Company’s share price when the units are awarded or re-measured.

The Company also maintains an employee share purchase plan. Under this plan, contributions by the Company’s employees are matched to a specific percentage by the Company and are recognized as an expense when the Company’s obligation to contribute arises.

(k) Income taxes

Income tax expense is comprised of current and deferred income tax. Current and deferred income taxes are recognized in earnings or loss except to the extent that they relate to a business combination, or to items recognized directly in equity or other comprehensive income ("OCI").

Current income taxes

Current income tax expense is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at year end, adjusted for amendments to tax payable with respect to previous years.

Deferred income taxes

Deferred tax assets and liabilities are recognized in respect of temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The following do not result in deferred tax assets or liabilities:

- temporary differences arising from the initial recognition of assets or liabilities, not arising in a business combination, that does not affect accounting or taxable profit;
- taxable temporary differences arising from the initial recognition of goodwill; and
- taxable temporary differences associated with investments in subsidiaries, associates, and interests in joint arrangements where the timing of the reversal of the temporary differences can be controlled by the parent and it is probable that the temporary difference will not reverse in the foreseeable future.

Deferred tax assets and liabilities are measured using the enacted or substantively enacted tax rates expected to apply when the asset is realized or the liability settled. The effect on deferred tax assets and liabilities of a change in tax rates is recognized in earnings or loss in the period that substantive enactment occurs except to the extent it relates to items recognized directly in equity or in other comprehensive income.

A deferred tax asset is recognized to the extent that it is probable that future taxable profits will be available against which the asset can be utilized. To the extent that the Company does not consider it probable that a deferred tax asset will be recovered, the deferred tax asset is reduced to its recoverable amount. The Company makes estimates of the likelihood of whether or not all or some portion of each deferred income tax asset will be realized, which is impacted by interpretation of tax laws and regulations, historic and future expected levels of taxable income, timing of reversals of taxable temporary timing differences, and tax planning initiatives. Levels of future taxable income are affected by, among other things, market gold prices, production costs, quantities of proven and probable gold reserves, interest rates, and foreign currency exchange rates.

Deferred tax assets and liabilities are offset when there is a legally enforceable right to set off tax assets against tax liabilities and when they relate to the same taxable entity and income taxes levied by the same taxation authority and the Company intends to settle its tax assets and liabilities on a net basis.

Uncertain tax positions

Uncertainties exist with respect to the interpretation of complex tax regulations, changes in tax laws, and the amount and timing of future taxable income. Given the wide range of international business relationships and the long-term nature and complexity of existing contractual agreements, differences arising between the actual results and the assumptions made, or future changes to such assumptions, could necessitate future adjustments to taxable income and expense already recorded. The Company establishes provisions, based on reasonable estimates, for possible consequences of audits by the tax authorities of the respective countries in which it operates. The amount of such provisions is based on various factors, such as experience of previous tax audits and differing interpretations of tax regulations by the taxable entity and the responsible tax authority. Such differences of interpretation may arise on a wide variety of issues depending on the conditions prevailing in the respective subsidiary's country of domicile.

(I) Financial instruments

The Company's financial instruments are classified and subsequently measured as follows:

Asset / **Liability**	
Cash and cash equivalents	Amortized cost
Equity securities	Fair value through OCI
Amounts receivable	Amortized cost
Accounts payable and accrued liabilities	Amortized cost
Debt and financing obligations	Amortized cost
Non-hedged derivatives	Fair value through profit or loss
Cash flow hedging derivatives	Fair value through OCI
Esperanza Milestone Payments	Fair value through profit or loss

The Company's accounting policy for financial instruments is as follows:

Financial assets

Financial assets are classified as either financial assets at fair value through profit or loss, amortized cost, or fair value through other comprehensive income ("OCI"). The Company determines the classification of its financial assets at initial recognition.

i. Financial assets recorded at fair value through profit or loss

All financial assets not classified as amortized cost or fair value through other comprehensive income ("FVOCI") are classified and measured at fair value through profit or loss ("FVPL"). Gains or losses on these items are recognized in net earnings or loss.

ii. Amortized cost

Financial assets are classified at amortized cost if both of the following criteria are met and the financial assets are not classified or designated as at fair value through profit and loss: 1) the Company's objective for these financial assets is to collect their contractual cash flows and 2) the asset's contractual cash flows represent 'solely payments of principal and interest'. The Company's amounts receivable are recorded at amortized cost as they meet the required criteria.

iii. Fair value through OCI

For equity securities that are not held for trading, the Company can make an irrevocable election at initial recognition to classify the instruments at FVOCI, with all subsequent changes in fair value being recognized in other comprehensive income. This

election is available for each separate investment. Under this FVOCI category, fair value changes are recognized in OCI while dividends are recognized in profit or loss. On disposal of the investment the cumulative change in fair value is not recycled to profit or loss, rather transferred to deficit. The Company has elected to account for equity securities within this manner.

iv. Reclassifications

Financial assets are not reclassified subsequent to their initial recognition, except in the period after the Company changes its business model for managing financial assets.

Financial liabilities

Financial liabilities, including accounts payable and accrued liabilities, as well as debt and financing obligations are accounted for at amortized cost.

Transaction costs associated with financial instruments, carried at fair value through profit or loss, are expensed as incurred, while transaction costs associated with all other financial instruments are included in the initial carrying amount of the asset or the liability. The amortization of debt issue costs is calculated using the effective interest method.

Derivative financial instruments

The Company may hold derivative financial instruments to hedge its risk exposure to fluctuations in commodity prices, including the Company's final product, consumables and other currencies against the US Dollars. Derivative financial instruments are measured at fair value at each reporting period.

Non-hedged derivative financial instruments

All derivative instruments not designated in a hedge relationship that qualify for hedge accounting are classified as financial instruments at fair value through profit or loss. Changes in fair value of non-hedging derivative financial instruments are included in net earnings or loss as non-hedging derivative gains or losses.

Derecognition

The Company derecognizes a financial asset when the contractual rights to the cash flows from the financial asset expire, or it transfers the rights to receive the contractual cash flows in a transaction in which substantially all of the risks and rewards of ownership of the financial asset are transferred or in which the Company neither transfers nor retains substantially all of the risks and rewards of ownership and it does not retain control of the financial asset.

The Company derecognizes a financial liability when its contractual obligations are discharged or cancelled, or expire. The Company also derecognizes a financial liability when its terms are modified and the cash flows of the modified liability are substantially different, in which case a new financial liability based on the modified terms is recognized at fair value. On derecognition of a financial liability, the difference between the carrying amount extinguished and the consideration paid (including any non-cash assets transferred or liabilities assumed) is recognized in profit or loss.

Offsetting

Financial assets and financial liabilities are offset and the net amount presented in the statement of financial position when, and only when, the Company currently has a legally enforceable right to set off the amounts and it intends either to settle them on a net basis or to realize the asset and settle the liability simultaneously.

(m) Hedges

The Company formally documents all relationships between hedging instruments and hedged items, as well as its risk management objectives and strategies for undertaking hedge transactions. This process includes linking all derivative hedging instruments to forecasted transactions. Hedge effectiveness is assessed based on the degree to which the cash flows from the derivative contracts are expected to offset the cash flows of the underlying transaction being hedged.

When a derivative is designated as a cash flow hedging instrument, the effective portion of changes in fair value is recognized in other comprehensive income. For hedged items other than the purchase of non-financial assets, the amounts accumulated in other comprehensive income are reclassified to the consolidated statement of other comprehensive income when the underlying hedged transaction, identified at the inception of the hedge, affects profit or loss. When hedging a forecasted transaction that results in the recognition of a non-financial asset, the amounts accumulated in other comprehensive income are removed and added to the carrying amount of the non-financial asset.

Any ineffective portion of a hedge relationship is recognized immediately in net earnings or loss. When derivative contracts designated as cash flow hedges are terminated, expired, sold or no longer qualify for hedge accounting, hedge accounting is discontinued prospectively. Any amounts recorded in other comprehensive income up until the time the contracts do not qualify for hedge accounting remain in other comprehensive income.

Gains or losses arising subsequent to the derivative contracts not qualifying for hedge accounting are recognized in the period incurred and are recorded in net earnings or loss. If the forecasted transaction is no longer expected to occur, then the amounts accumulated in other comprehensive income are reclassified to net earnings or loss immediately.

4. CHANGES IN ACCOUNTING STANDARDS

New Standards issued and adopted

The Company adopted the following accounting standards and amendments to accounting standards, effective January 1, 2023:

On May 23, 2023, the Company adopted International Tax Reform - Pillar Two Model (Amendments to IAS 12). The amendments provide a temporary mandatory exception, applied on a retrospective basis, to the accounting requirements for the deferred tax that arises from legislation implementing the top-up tax (Pillar Two legislation), so that an entity would neither recognize nor disclose information about deferred tax assets and liabilities related to Pillar Two income taxes, and will account for it as a current tax when it is incurred. The Company holds investments in certain subsidiaries registered in the Netherlands which has enacted the Minimum Tax Act 2024, which is based on the EU Directive, and will introduce a Qualified Domestic Minimum Top-Up Tax (QDMTT) and an Income Inclusion Rule (IIR), both for reporting years starting on or after December 31, 2023, and an Undertaxed Payments Rule (UTPR) for reporting years starting on or after December 31, 2024. The Company is assessing the impact of the Pillar Two income taxes legislation on its future financial performance.

On May 7, 2021, the IASB issued Deferred Tax related to Assets and Liabilities arising from a Single Transaction (Amendments to IAS 12). The amendments narrow the scope of the initial recognition exemption ("IRE") so that it does not apply to transactions that give rise to equal and offsetting temporary differences. As a result, companies will need to recognize a deferred tax asset and a deferred tax liability for temporary differences arising on initial recognition of a lease and a decommissioning provision. The adoption of the new standard did not materially impact the financial statements of the Company.

On February 12, 2021, the IASB issued Definition of Accounting Estimates (Amendments to IAS 8) and Disclosure Initiative – Accounting Policies (Amendments to IAS 1 and IFRS Practice Statement 2 Making Materiality Judgements). The amendments require the disclosure of material accounting policy information rather than disclosing significant accounting policies and clarifies how to distinguish changes in accounting policies from changes in accounting estimates. The adoption of the new amendments has been applied to the disclosure of material accounting policies in note 3 of these financial statements however the amendments did not result in any change to the Company's accounting policies or application thereof.

Standards issued but not yet adopted

Standards issued, but not yet adopted include:

On January 23, 2020, the IASB issued amendments to IAS 1 *Presentation of Financial Statements*, to clarify the classification of liabilities as current or non-current. For the purposes of non-current classification, the amendments removed the requirement for a right to defer settlement or roll over of a liability for at least twelve months to be unconditional. Instead, such a right must have substance and exist at the end of the reporting period. The amendments also clarify how a company classifies a liability that includes a counterparty conversion option. The amendments state that:

- settlement of a liability includes transferring a company's own equity instruments to the counterparty, and
- when classifying liabilities as current or non-current a company can ignore only those conversion options that are recognized as equity

The amendments are effective for annual periods beginning on or after January 1, 2024. Early adoption is permitted. The Company does not anticipate the adoption of the new standard to impact the financial statements.

5. CRITICAL ACCOUNTING ESTIMATES AND JUDGEMENTS

Many of the amounts included in the Consolidated Statements of Financial Position require management to make estimates and judgements. Accounting estimates and assumptions are continually evaluated and are based on historical experience and other factors, including expectations of future events that are believed to be reasonable under the circumstances. Revisions to accounting estimates are recognized in the period in which the estimates are revised.

Critical accounting estimates

The following is a list of the accounting estimates that the Company believes are critical, due to the degree of uncertainty regarding the estimates or assumptions involved and the magnitude of the asset, liabilities, revenue or expense being reported. Actual results may differ from these estimates.

Amortization

The Company makes estimates of the quantities of proven and probable mineral reserves of its mines and the portion of mineral resources expected to be ultimately converted to mineral reserves. The estimation of quantities of mineral reserves and mineral resources is complex, requiring significant subjective assumptions that arise from the evaluation of geological, geophysical, engineering and economic data for a given ore body. This data could change over time as a result of numerous factors, including new information gained from development activities, evolving production history and a reassessment of the viability of production under different economic conditions. The Company forecasts prices of commodities, exchange rates, production costs, discount rates, and recovery rates. These estimates may change the economic status of mineral reserves and may result in mineral reserves and mineral resources being revised.

The Company uses estimated proven and probable mineral reserves, and an estimate of mineral resources as the basis for amortizing certain mineral property, plant and equipment. The physical life of these assets, and related components, may differ from the Company's estimate, which would impact amortization expense. Plant and equipment not depleted on a unit of production basis based on recoverable ounces are depleted on a straight-line basis. Changes to estimates of the useful life and residual value may be impacted by the Company's mine plans and rate of usage of these plant and equipment.

Inventory

The Company accounts for its ore stockpiles and in-process precious metals inventory using a process flow for applicable costs appropriate to the physical transformation of ore through the mining, crushing, leaching from heap leach operations, milling and gold recovery process. The Company estimates the expected ultimate recovery based on laboratory tests and ongoing analysis of leach pad kinetics in order to estimate the recoverable metals at the end of each accounting period. If the Company determines at any time that the ultimate recovery should be adjusted downward, then the Company will adjust the average carrying value of a unit of metal content in the in-process inventory and adjust upward on a prospective basis the unit cost of subsequent production. Should an upward adjustment in the average carrying value of a unit of metal result in the carrying value exceeding the realizable value of the metal, the Company would write down the carrying value to the realizable value.

Decommissioning liabilities

The Company makes estimates of the timing and amount of expenditures required to settle the Company's decommissioning liabilities. The principal factors that can cause expected future expenditures to change are: the construction of new processing facilities; changes in the quantities of material in reserves and a corresponding change in the life of mine plan; changing ore characteristics that ultimately impact the environment; changes in water quality that impact the extent of water treatment required; and changes in laws and regulations governing the protection of the environment. In general, as the end of the mine life nears, the reliability of expected cash flows increases, but earlier in the mine life, the estimation of a decommissioning liability is inherently more subjective.

Critical accounting judgements

The following are critical judgements that management has made in the process of applying accounting policies that may have a significant impact on the amounts recognized in the consolidated financial statements.

Indicators of impairment and reversal of impairment

The Company considers both external and internal sources of information in assessing whether there are any indications that CGUs are impaired or reversal of impairment is needed. External sources of information the Company considers include changes in the market, economic and legal environment in which the Company operates that are not within its control and are expected to affect the recoverable amount of CGUs. Internal sources of information the Company considers include the manner in which mineral properties and plant and equipment are being used or are expected to be used and indications of changes in the economic performance of the assets. The primary external factors considered are changes in forecast metal prices, changes in laws and regulations and the Company's market capitalization relative to its net asset carrying amount. Primary internal factors considered are the Company's current mine performance against expectations, changes in mineral reserves and resources, life of mine plans and exploration results.

6. AMOUNTS RECEIVABLE

	December 31, 2023	December 31, 2022
Sales tax receivables		
Canada	$12.2	$15.1
Mexico	35.0	16.4
Other	0.7	1.1
Other receivables	5.5	4.6
	$53.4	**$37.2**

7. INVENTORY

	December 31, 2023	December 31, 2022
In-process precious metals	$195.3	$159.4
Ore in stockpiles	2.8	10.0
Parts and supplies	65.2	57.2
Dore, and refined precious metals	7.9	7.6
	271.2	**234.2**

The amount of inventories recognized in mining and processing costs for the year ended December 31, 2023, was $448.4 million (December 31, 2022 - $400.5 million). The amount of inventories recognized in amortization costs for the year ended December 31, 2023, was $190.2 million (December 31, 2022 - $171.5 million). Included in in-process precious metals are inventories totaling $8.0 million that are expected to be realized after more than one year.

The Company assesses the net realizable value of inventory at each reporting period. In the second and third quarters of 2022, given a decrease in the gold price at the period ends and higher costs at the Mulatos operation, the Company recorded a $33.9 million cumulative reduction in the carrying value of the in-process precious metals inventory at Mulatos. This was comprised of $27.6 million related to mining and processing costs and $6.3 million related to amortization.

8. MINERAL PROPERTY, PLANT AND EQUIPMENT

	Plant and equipment	Mineral property		Exploration and evaluation	**Total**
		Depletable	Non-depletable		
Cost					
At December 31, 2021	$1,629.3	$2,631.2	$285.6	$319.3	$4,865.4
Additions	40.2	143.8	123.7	22.1	329.8

Disposals	(35.5)	(1.3)	—	(1.4)	(38.2)
At December 31, 2023	**$1,808.4**	**$2,917.5**	**$440.0**	**$302.6**	**$5,468.5**
Accumulated amortization and impairment charges					
At December 31, 2021	$717.8	$811.8	142.4	$84.9	$1,756.9
Amortization	91.7	89.4	—	—	181.1
Disposals	(1.2)	—	—	—	(1.2)
Impairment expense on Esperanza Project *(iv)*	—	—	—	38.2	38.2
Sale of Esperanza Project *(iv)*	(0.4)	—	—	(38.2)	(38.6)
At December 31, 2022	$807.9	$901.2	$142.4	$84.9	$1,936.4
Amortization	106.6	101.0	—	—	207.6
Disposals	(34.3)	(1.3)	—	—	(35.6)
At December 31, 2023	**$880.2**	**$1,000.9**	**$142.4**	**$84.9**	**$2,108.4**
Net carrying value					
At December 31, 2022	$980.5	$1,899.5	$126.9	$166.9	$3,173.8
At December 31, 2023	**$928.2**	**$1,916.6**	**$297.6**	**$217.7**	**$3,360.1**

[1] La Yaqui Grande commenced commercial production on June 20, 2022.

The net carrying values and capital additions by segment (note 17) are as follows:

	December 31, 2023		December 31, 2022	
	Mineral Property, Plant and Equipment	Capital additions for the year ended[1]	Mineral Property, Plant and Equipment	Capital additions for the year ended[1]
Young-Davidson	$1,500.3	$73.5	1,504.7	68.4
Island Gold	1,397.7	243.4	1,174.6	185.1
Mulatos	293.0	29.9	343.8	58.8
Corporate and other	169.1	21.1	150.7	17.5
	$3,360.1	**$367.9**	**$3,173.8**	**$329.8**

[1] Segment capital additions are presented on an accrual basis. Mineral property, plant and equipment in the consolidated statements of cash flows are presented on a cash expenditure basis.

(i) Acquisition of Manitou Gold Inc.

On May 23, 2023, the Company acquired all the issued and outstanding common shares of Manitou Gold Inc. ("Manitou") not previously owned by the Company, by way of a plan of arrangement (the "Arrangement"). Under the terms of the Arrangement Manitou shareholders received 0.0035251 of an Alamos share for each Manitou share held. Prior to the closing of the Arrangement, the Company owned 65,211,077 Manitou shares, which represented approximately 19% of Manitou's basic common shares outstanding.

Upon closing of the transaction, the Company issued 984,760 common shares as part of the consideration. In addition, the Company issued 60,833 common shares as payment for the change of control obligations for departing management. Common shares issued were valued at the closing share price on May 23, 2023 of CAD $17.37. Total consideration for the acquisition was $16.7 million, including transaction costs of $0.2 million.

Management determined that the acquisition of Manitou did not meet the definition of a business combination in accordance with IFRS 3, *Business Combinations*. Accordingly, the Company has accounted for the transaction as an asset acquisition. The Manitou mineral property has been recognized as part of the Island Gold reportable operating segment (note 17). The allocation of the purchase price to the net assets acquired are as follows:

Consideration paid	
Fair value of total shares issued (note 13)	$13.4
Fair value of 19% interest in Manitou prior to acquisition	3.1
Transaction costs	0.2
	$16.7
Net assets acquired	
Mineral property, plant and equipment	$20.0
Current liabilities [(a)]	(1.5)
Decommissioning liabilities	(1.8)
	$16.7

(a) Included in current liabilities are $1.1 million of Canadian dollar denominated share purchase warrants which were recognized as a liability at the date of acquisition. During the year ended December 31, 2023, 61,683 warrants were exercised for gross proceeds of $0.7 million (note 13).

(ii) Royalties

The Company is obliged to make certain royalty payments on its mineral properties. The following table includes the significant royalties payable by the Company:

Location	Royalties payable
Mulatos	0.5% Extraordinary Mining Duty due to the Mexican government
Young-Davidson	1.5% net smelter royalty
Island Gold	2-3% net smelter royalties, dependent on claim

(iii) Other

The carrying value of construction in progress at December 31, 2023 was $299.0 million (December 31, 2022 - $155.8 million). and primarily relates to the Phase 3+ Expansion at Island Gold.

(iv) Sale of the Esperanza Project

On February 28, 2022, the Company announced that it has entered into a binding agreement to sell its non-core Esperanza Gold Project ("Esperanza") located in Morelos State, Mexico to Zacatecas Silver Corp. ("Zacatecas Silver") for total consideration of up to $60 million (the "Transaction"), including $5 million of cash. The Transaction closed on April 12, 2022. The Company measured the Esperanza asset group at the lower of carrying value and fair value less costs of disposal ("FVLCD"). The fair value of the expected purchase consideration was used as the basis for determining the asset group's fair value and an estimate of the disposal costs was used as the basis for the costs to sell. In performing this assessment, the Company concluded that the expected fair value less costs of disposal of the Esperanza asset group was lower than its carrying value. As a result, the Company recognized a pre-tax impairment loss of $38.2 million in the first quarter of 2022, inclusive of $0.2 million of transaction costs incurred to date.

As part of the sale, the Company is entitled to receive additional consideration based on Zacatecas Silver achieving certain milestones ("Milestone Payments") (notes 9, 18). These proceeds are based on future events, which are not in the Company's control, as such the Company remeasures these proceeds at fair value at each reporting date. The fair value of the Milestone Payments at December 31, 2023 was $5.7 million (December 31, 2022 - $19.1 million).

9. OTHER NON-CURRENT ASSETS

	December 31, 2023	December 31, 2022
Investment Tax Credits (Canada) (i)	$29.1	$28.2
Milestone Payments (ii)	5.7	19.1
Other	11.3	12.1
	$46.1	**$59.4**

(i) Investment Tax Credits

The Investment Tax Credits relate to Canadian exploration expenses incurred while determining the existence, location, extent or quality of mineral resources in Canada. The amount recognized relates to expenses incurred at the Young-Davidson mine, and will be utilized when the mine becomes cash tax payable.

(ii) Esperanza Milestone Payments

The Milestone Payments resulted from the sale of the Esperanza Project to Zacatecas Silver Corp. on April 12, 2022. The fair value of the Milestone Payments is recalculated at each reporting date, based on management's estimate of the timing and probability (notes 8, 18).

ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	December 31, 2023	December 31, 2022
Trade accounts payable and accrued liabilities	$167.8	$147.6
Royalties payable (note 8)	2.7	2.2
Derivative liabilities (note 18)	1.0	4.2
Share-based compensation liability	22.7	18.3
Share purchase warrants (note 8)	0.4	—
Current portion of equipment financing obligations	0.4	0.4
	$195.0	**$172.7**

11. DECOMMISSIONING LIABILITIES

Balance – current and non-current portion December 31, 2021	**$106.1**
Reclamation expenditures	(0.4)
Accretion expense	4.2
Revisions to expected discounted cash flows	6.7
Balance – current and non-current portion December 31, 2022	**$116.6**
Liability assumed on Manitou acquisition (note 8)	1.8
Reclamation expenditures	(0.3)
Accretion expense	6.8
Revisions to expected discounted cash flows[1]	11.9
Balance – current and non-current portion December 31, 2023	**$136.8**
Less: Current portion of decommissioning liability	(12.6)
Balance – non-current portion December 31, 2023	**$124.2**

[1] Included in the revisions to expected discounted cash flows are costs of $3.3 million related to closed sites with a corresponding expense recorded in Other Loss (note 14).

All of the expenditures are expected to occur between 2024 and 2049. The discount rates used in discounting the estimated reclamation and closure cost obligations were between 3.0% and 7.4% for the year ended December 31, 2023 (2022 –2.9% and 10.5%), and the inflation rate used was between1.7% and 3.6% for the year ended December 31, 2023 (2022 –1.9% and 9.5%).

The total undiscounted value of the decommissioning liabilities at December 31, 2023 was $165.2 million (2022 - $134.0 million).

12. INCOME TAXES

The following table represents the major components of income tax expense recognized in net earnings for the years ended December 31, 2023 and 2022:

	December 31, 2023	December 31, 2022
Current income tax expense	$52.7	$10.7
Deferred income tax expense	31.0	54.6
Income tax expense recognized in net earnings	**$83.7**	**$65.3**

The statutory tax rate for 2023 was 25.0% (2022 – 25.0%). The following table reconciles the expected income tax expense at the Canadian combined statutory income tax rate to the amounts recognized in net earnings for the years ended December 31, 2023 and 2022:

	December 31, 2023	December 31, 2022
Earnings before income taxes	$293.7	$102.4
Statutory tax rate	25.0 %	25.0 %
Expected income tax expense based on above rates	$73.4	$25.6
Effect of higher tax rates in foreign jurisdictions	3.9	(3.9)
Non-deductible expenses	5.0	4.3
Impact of local mining taxes	19.6	14.7
Impact of foreign exchange	(16.3)	19.4
Impact of renouncement of flow through share expenditures	—	2.1
Withholding tax	1.5	1.6
Change in unrecognized temporary differences	2.5	3.3
Other	(5.9)	(1.8)
Income tax expense	**$83.7**	**$65.3**

For balance sheet presentation purposes, the Mexico deferred tax asset of $9.0 million has been disclosed separately from the consolidated deferred tax liability. The change in consolidated deferred income tax liability and deferred tax balance by category, both below, are shown inclusive of the Mexico deferred tax asset.

The following table reflects the change in net deferred income tax liability at December 31, 2023 and December 31, 2022:

	December 31, 2023	December 31, 2022
Balance, beginning of year	$660.9	$623.2
Deferred income tax expense recognized in net earnings	31.0	54.6
Deferred income tax (recovery) expense recognized in OCI	2.7	(1.0)
Deferred tax liability derecognized on sale of Esperanza Project	—	(15.9)
Balance, end of year	**$694.6**	**$660.9**

The following summarizes the components of deferred income tax at December 31, 2023 and December 31, 2022:

	December 31, 2023	December 31, 2022
Mineral property, plant and equipment	$735.3	$683.0
Inventory capitalization	5.1	12.2
Other deductible temporary differences	(41.1)	(34.2)
Non-capital losses carried forward	(4.7)	(0.1)
Deferred income tax liability	**$694.6**	**$660.9**

The Company has Canadian tax losses of $6.3 million expiring between 2024 and 2040, Mexican tax losses of $40.9 million expiring between 2024 and 2031, United States tax losses of $19.4 million expiring between 2029 and 2038, as well as Turkish tax losses of $0.8 million expiring between 2024 and 2027.

The Company has unrecognized deferred income tax assets at December 31, 2023 in respect of aggregate loss carryforwards, deductible temporary differences and unused tax credits. The unrecognized loss carryforwards, deductible temporary differences and unused tax credits are $139.7 million (December 31, 2022 -$118.0 million).

At December 31, 2023, the Company has unrecognized deferred income tax liabilities on taxable temporary differences of $45.0 million (December 31, 2022 - $16.9 million) for taxes that would be payable on the unremitted earnings of certain subsidiaries of the Company.

13. SHARE CAPITAL

a) Authorized share capital of the Company consists of an unlimited number of fully paid Class A common shares without par value.

	Number of Shares	Amount
Outstanding at December 31, 2021	**391,889,733**	**$3,692.9**
Shares issued through:		
Share-based compensation plans	1,198,125	7.6
Shares repurchased and cancelled *(i)*	(1,100,000)	(10.4)
Flow-through share financing	922,483	6.9
DRIP *(ii)*	527,770	4.1
ESPP *(iii)*	373,806	2.7
Cancellation of unexchanged shares	(5,428)	—
Outstanding at December 31, 2022	**393,806,489**	**$3,703.8**
Shares issued through:		
Share-based compensation plans	1,425,024	12.3
Manitou acquisition (note 8)	1,045,593	13.4
DRIP *(ii)*	353,084	4.1
ESPP *(iii)*	469,566	5.6
Exercise of Manitou warrants (note 8)	60,983	0.9
Cancellation of unexchanged shares	(203,755)	(1.5)
Outstanding at December 31, 2023	**396,956,984**	**$3,738.6**

(i) Normal Course Issuer Bid ("NCIB")

In December 2023, the Company renewed its NCIB permitting the purchase for cancellation of up to 34,485,405 common shares, representing 10% of the Company's public float. The Company may purchase Common Shares under the NCIB up to December 23, 2024.

During the year ended December 31, 2023, the Company did not purchase any common shares (year ended December 31, 2022 - 1,100,000 common shares at a cost of $8.2 million or $7.41 per share).

(ii) DRIP

The Company allows existing shareholders to participate in a DRIP. This provides shareholders the option of increasing their investment in the Company by electing to receive common shares in place of cash dividends. The Company has the discretion to elect to issue such common shares at up to a 5% discount to the prevailing market price from treasury, or purchase the common shares on the open market. For the year ended December 31, 2023, the Company issued 353,084 shares pursuant to the DRIP, valued at $4.1 million.

(ii) ESPP

The Company has an ESPP which enables employees to purchase Class A common shares through payroll deduction. At the option of the Company, the common shares can be issued from treasury based on the volume weighted average closing price of the last five days prior to the end of the month or the shares may be purchased for plan participants in the open market. During the year ended December 31, 2023, the Company issued 469,566 shares from treasury pursuant to the ESPP (year ended December 31, 2022 - 373,806 shares).

b) Stock options

The following is a continuity of the changes in the number of stock options outstanding:

	Number	Weighted average exercise price (CAD$)
Outstanding at December 31, 2021	**4,601,726**	**$7.47**
Granted	634,727	9.53
Exercised	(1,198,125)	5.89
Forfeited	(113,477)	6.68
Outstanding at December 31, 2022	**3,924,851**	**$8.32**
Granted	481,449	14.10
Exercised	(1,424,916)	8.01
Forfeited	(215,007)	10.40
Outstanding at December 31, 2023	**2,766,377**	**$9.32**

During the year ended December 31, 2023, the weighted average share price at the date of exercise for stock options exercised was CAD $16.82 per share (for the year ended December 31, 2022 - CAD $11.98 per share).

(i) Stock options granted

During the year ended December 31, 2023, the Company granted481,449 stock options which are vested in tranches equally over three years (year ended December 31, 2022 - 634,727). The following table presents the weighted average fair value assumptions used in the Black-Scholes valuation:

For options granted in the year ended:	**December 31, 2023**	**December 31, 2022**
Weighted average share price at grant date (CAD$)	$14.10	$9.53
Risk-free rate	3.87 %	1.48 %
Expected dividend yield	0.96 %	1.20 %
Expected stock price volatility (based on historical volatility)	48 %	53 %
Expected life of option (months)	42	54
Weighted average per share fair value of stock options granted (CAD$)	$4.94	$3.80

Stock options outstanding and exercisable as at December 31, 2023:

	Outstanding			**Exercisable**	
Range of exercise prices (CAD$)	**Number of options**	**Weighted average exercise price (CAD$)**	**Weighted average remaining contractual life (years)**	**Number of options**	**Weighted average exercise price (CAD$)**
$6.01 - $7.00	567,111	6.57	1.78	567,111	6.57
$7.01 - $8.00	396,373	7.63	3.02	396,373	7.63
$8.01 - $9.00	15,571	8.63	3.16	15,571	8.63
$9.01 - $11.00	1,355,873	9.47	4.61	663,694	9.41
$11.01 - $17.77	431,449	14.10	4.79	—	—
	2,766,377	**$9.32**	**4.09**	**1,642,749**	**$7.99**

c) Other employee long-term incentives

The following is a continuity of the changes in the number of other long-term incentive plans ("LTI") outstanding for the years ended December 31, 2023 and 2022:

	Restricted share units ("RSU")	Deferred share units ("DSU")	Performance share units ("PSU")
Outstanding units, December 31, 2021	**2,168,184**	**911,428**	**1,329,655**
Granted	905,058	143,178	497,895
Forfeited	(296,907)	—	(72,522)
Settled	(641,786)	—	(404,603)
Outstanding units, December 31, 2022	**2,134,549**	**1,054,606**	**1,350,425**
Granted	747,993	112,653	369,589
Forfeited/expired	(383,686)	—	(134,563)
Settled	(587,118)	(154,025)	(426,163)
Outstanding units, December 31, 2023	**1,911,738**	**1,013,234**	**1,159,288**

The settlement of LTI is either in cash or equity depending on the features of the specific LTI plan. The settlement of DSUs is in cash, PSUs are equity or cash settled at the Company's discretion, and certain RSUs are cash settled with the remaining settled in cash or equity at the Company's discretion, depending on the year of grant.

PSUs and RSUs granted to non-executives vest on the third anniversary from the date of grant. RSUs granted to executives vest in three equal tranches commencing on the first anniversary of the grant date. Mandatory or elective DSUs vest immediately and the Board of Directors determines the vesting schedule for discretionary DSUs at the time of grant.

The weighted average grant date fair value of the RSUs, DSUs and PSUs granted during the year ended December 31, 2023 was $4.07, $14.35 and $14.10, respectively (year ended December 31, 2022 - $9.66, $9.67 and $9.65, respectively).

(d) Dividends

During the year ended December 31, 2023, the Company declared dividends totaling $39.4 million, of which $35.3 million were paid in cash (2022 - $35.1 million paid in cash). The remaining $4.1 million were issued in the form of common shares pursuant to the Company's DRIP (2022 - $4.1 million in shares issued pursuant to the DRIP).

14. OTHER LOSS

	For the years ended	
	December 31, 2023	December 31, 2022
Unrealized loss on non-hedging derivatives	($0.9)	($0.3)
Reduction of obligation to renounce flow-through exploration expenditures	0.7	2.7
Turkish projects care and maintenance and arbitration costs	(2.9)	(5.0)
Fair value adjustment for sale of silver stream	—	2.6
Fair value adjustment for Milestone Payments (note 18)	(13.4)	(1.1)
Revision to reclamation for closed sites	(3.3)	—
Care and maintenance costs related to the El Chanate mine	(0.6)	(1.0)
Loss on disposal of assets	(1.9)	(0.7)
Other	(1.5)	(2.3)
	($23.8)	**($5.1)**

15. EARNINGS PER SHARE

	For the years ended	
	December 31, 2023	**December 31, 2022**
Net earnings	**$210.0**	**$37.1**
Weighted average number of common shares outstanding (in thousands)	395,509	392,172
Basic earnings per share	**$0.53**	**$0.09**
Dilutive effect of potential common share equivalents (in thousands)	2,560	2,336
Diluted weighted average number of common shares outstanding (in thousands)	398,069	394,508
Diluted earnings per share	**$0.53**	**$0.09**

The following table lists the share units that were excluded from the computation of diluted earnings per share. The share units were excluded as the exercise price related to the particular security exceeded the average market price of the Company's common shares of CAD $16.42 for the year ended December 31, 2023 (2022 - CAD $10.26), or the inclusion of the share units had an anti-dilutive effect on net earnings.

Share units excluded from calculation of diluted earnings per share for the years ended:

(in thousands)	**December 31, 2023**	**December 31, 2022**
Stock options	4	30

16. SUPPLEMENTAL CASH FLOW INFORMATION

Changes in working capital and income taxes received or paid:

	For the years ended	
	December 31, 2023	**December 31, 2022**
Amounts receivable	($13.6)	($8.8)
Inventory	(26.0)	(55.2)
Advances and prepaid expenses	(0.6)	2.3
Accounts payable and accrued liabilities	2.3	(0.1)
Cash taxes paid	(8.3)	(1.3)
	($46.2)	**($63.1)**

Other items:

	For the years ended December 31, 2023	December 31, 2022
Unrealized gain on non-hedging derivatives	$0.9	$0.3
Reduction of obligation to renounce flow-through exploration expenditures	(0.7)	(2.7)
Proceeds from employee share purchase plan	4.7	2.8
Reclamation activities	(0.3)	(0.4)
Revision to reclamation for closed sites	3.3	—
Interest received	7.8	1.9
Credit facility standby fees	(2.1)	(2.1)
Distribution of share-based compensation	(15.8)	(8.5)
Fair value adjustment for sale of silver stream	—	(2.6)
Fair value adjustment for Milestone Payments (note 18)	13.4	1.1
Loss on disposal of assets	1.9	0.7
Other	(0.4)	2.8
	$12.7	**($6.7)**

17. SEGMENTED INFORMATION

(a) Segment revenues and results

Operating results of operating segments are reviewed by the Company's chief operating decision maker, being the Company's Chief Executive Officer, to make decisions about resources to be allocated to the segments and to assess their performance. The Company considers its reportable operating segments to be its operating mines and significant development projects. The Company operates in two principal geographical areas - Canada, and Mexico. The Young-Davidson and Island Gold mines operate in Canada, and the Mulatos mine operates in Sonora, Mexico.

Significant information relating to the Company's reporting operating segments is as follows:

Year Ended December 31, 2023	Young-Davidson	Mulatos[1]	Island Gold	Corporate /other[2]	Total
Operating revenues	$355.3	$420.2	$247.8	—	**$1,023.3**
Cost of sales					
Mining and processing	166.2	188.4	82.7	—	**437.3**
Royalties	5.3	2.2	2.7	—	**10.2**
Amortization	76.7	75.3	38.2	—	**190.2**
	248.2	265.9	123.6	—	**637.7**
Expenses					
Exploration	2.9	9.9	3.7	1.7	**18.2**
Corporate and administrative	—	—	—	27.6	**27.6**
Share-based compensation	—	—	—	21.7	**21.7**
Earnings (loss) from operations	$104.2	$144.4	$120.5	($51.0)	**$318.1**
Finance expense					**(2.5)**
Foreign exchange gain					**1.9**
Other loss					**(23.8)**
Earnings before income taxes					**$293.7**

Year Ended December 31, 2022					
	Young-Davidson	Mulatos[1]	Island Gold	Corporate/other[2]	Total
Operating revenues	$347.8	$238.1	$235.3	—	**$821.2**
Cost of sales					
Mining and processing	163.4	150.4	80.6	—	**394.4**
Inventory net realizable value adjustment	—	33.9	—	—	**33.9**
Royalties	5.3	1.2	2.6	—	**9.1**
Amortization	81.8	52.5	37.2	—	**171.5**
	250.5	238.0	120.4	—	**608.9**
Expenses					
Exploration	4.3	7.5	4.7	1.9	**18.4**
Corporate and administrative	—	—	—	25.9	**25.9**
Share-based compensation	—	—	—	18.3	**18.3**
Impairment	—	—	—	38.2	**38.2**
Earnings (loss) from operations	$93.0	($7.4)	$110.2	($84.3)	**$111.5**
Finance expense					**(5.7)**
Foreign exchange gain					**1.7**
Other loss					**(5.1)**
Earnings before income taxes					**$102.4**

1. Mulatos includes the La Yaqui Grande operation.
2. Corporate and other consists of corporate balances and exploration, development projects and mines in reclamation.

(b) Segment assets and liabilities

	Total Assets		Total liabilities	
	December 31, 2023	December 31, 2022	December 31, 2023	December 31, 2022
Young-Davidson	$1,693.2	$1,644.9	$381.8	$353.2
Island Gold	1,453.6	1,222.5	476.4	415.5
Mulatos [1]	631.5	606.0	172.7	143.1
Corporate/other [2]	222.9	200.8	46.8	41.3
Total assets and liabilities	**$4,001.2**	**$3,674.2**	**$1,077.7**	**$953.1**

1. Mulatos includes the La Yaqui Grande operation.
2. Corporate and other consists of corporate balances, exploration and development projects and mines in reclamation.

18. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

Fair values of financial instruments

The following table shows the carrying amounts and fair values of financial assets and financial liabilities, including their levels in the fair value hierarchy. It does not include fair value information for financial assets and financial liabilities not measured at fair value if the carrying amount is a reasonable approximation of fair value. The Company does not have any non-recurring fair value measurements as at December 31, 2023. Levels 1 to 3 of the fair value hierarchy are defined based on the degree to which fair value inputs are observable or unobservable, as follows:

- Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities;
- Level 2 inputs are inputs other than quoted prices included within Level 1 that are observable for the net asset or liability, either directly or indirectly; and
- Level 3 inputs are unobservable (supported by little or no market activity).

	December 31, 2023			December 31, 2022		
	Level 1	Level 2	Level 3	Level 1	Level 2	Level 3
Financial assets (liabilities)						
Fair value through profit or loss						
Milestone Payments (note 9)	—	—	5.7	—	—	19.1
Esperanza silver stream held for sale	—	—	—	—	—	5.0
Gold derivatives not designated as hedging instruments[1]	—	(0.8)	—	—	0.1	—
Share purchase warrants (note 8)	—	(0.4)	—	—	—	—
Fair value through OCI						
Equity securities	13.0	—	—	18.6	—	—
Currency derivatives designated as hedging instruments[1]	—	6.6	—	—	(4.3)	—
Fuel derivatives designated as hedging instruments[1]	—	(0.2)	—	—	—	—
	$13.0	**$5.2**	**$5.7**	**$18.6**	**($4.2)**	**$24.1**

[1]On a gross basis, total derivatives recognized as at December 31, 2023 consist of total assets of $6.6 million, which is included in other current assets and total liabilities of $1.0 million, included in accounts payable and accrued liabilities (note 10) (December 31, 2022 - total assets of nil and total liabilities of $4.2 million).

The methods of measuring financial assets and liabilities have not changed during the year ended December 31, 2023.

The fair value of option and forwards (gold, fuel and currency) contracts are determined using a market approach with reference to observable market prices for similar assets traded in an active market. These are classified within Level 2 of the fair value hierarchy. The use of reasonably possible alternative assumptions would not significantly affect the Company's results.

The fair value measurement of the Milestone Payments (note 9) is based on unobservable inputs and are therefore classified within Level 3 of the fair value hierarchy. The determination of the fair value of the Milestone Payments requires the Company to make certain estimates and judgements in relation to future events based on the current understanding of the facts and circumstances known to them. The fair value of the Milestone Payments was determined using discounted cash flows based on significant inputs and assumptions such as internally derived discount rate, an estimate of timelines to realize the payments and a success probability factor. Based on the Company's assessment of the fair value of the Milestone Payments at December 31, 2023, the Company reduced the applied success probability factor from 75% to 25% reflecting the current challenging capital markets for early stage exploration projects. As a result, the Company recognized a reduction in the fair value of the Milestone Payments of $11.0 million in the fourth quarter of 2023. The discount rate for the milestone payments is 14.75%. Changes to these inputs and assumptions could have a significant impact on the measurement of the financial assets. A 10% change in these assumptions would impact the Company's net earnings before tax by $0.8 million for the year ended December 31, 2023.

Revolving Credit Facility

The Company has access to an undrawn credit facility (the "Facility") of $500.0 million, not including the uncommitted $100.0 million accordion feature to increase the credit facility up to $600.0 million. In February 2024, the Company extended the term of the revolving credit facility by one year to February 2028. The Facility bears interest at a rate of Adjusted Term SOFR Rate plus 1.875% on drawn amounts and stand-by fees of 0.42% on undrawn amounts.

The Facility is secured against all of the material present and future assets, property and undertakings of the Company. The Facility contains various covenants customary for a loan facility of this nature, including limits on indebtedness, asset sales and liens. It contains financial covenant tests that include (a) a minimum interest coverage ratio of 3.0:1.0 and (b) a maximum net leverage ratio of 3.5:1.0, both as defined in the agreement. As at December 31, 2023, the Company is in compliance with the covenants.

Derivative Instruments designated as cash flow hedges

Currency option and forward contracts and fuel option contracts

The Company enters into option and forward contracts to hedge against the risk of an increase in the value of the Canadian dollar and Mexican peso versus the US dollar. These option and forward contracts are for the purchase of local currencies and the sale of US dollars, which settle on a monthly basis, and the Company believes this is an appropriate manner of managing currency risk. The Company has designated options and forwards as cash flow hedges for the highly probable Canadian dollar and Mexican peso.

The Company also enters into option contracts to hedge against the risk of an increase in the price of diesel fuel. These option contracts are for the purchase of New York Harbour Ultra Low Sulfur Diesel ("ULSD") contracts, which settle on a monthly basis, and the Company believes this is an appropriate manner of managing price risk. The Company has designated these options as cash flow hedges for the highly probable consumption of diesel.

These currency option and forward and fuel option derivatives meet the hedge effectiveness criteria and are designated in a hedge accounting relationship as a result of the following factors:

- An economic relationship exists between the hedged items and hedging instrument, as notional amounts match and both the hedged item and hedging instrument fair values move in response to the same risk (foreign exchange risk and diesel price risk). Cash flows in relation to the designated hedged item and hedging instrument are matched since the option and forward contracts (hedging instrument) matures during the same month as the operational cash flows (hedged item) are expected to be incurred.
- The hedge ratio is one to one for this hedging relationship, as the hedged item is foreign currency risk and diesel price risk that is hedged with a foreign currency or diesel fuel hedging instrument using one unit of both the hedged and hedging item respectively.
- Credit risk is not material in the fair value of the hedging relationship.

The Company has identified two sources of potential ineffectiveness: 1) the timing of cash flow differences between the expenditure and the related derivative and 2) the inclusion of credit risk in the fair value of the derivative not replicated in the hedged item. The Company expects the impact of these sources of hedge ineffectiveness to be minimal. The timing of hedge settlements and incurred expenditures are closely aligned, as they are expected to occur within 30 days of each other. As noted above, credit risk is not a material component of the fair value of the Company's hedging instruments, as all counterparties are reputable Canadian banking institutions and are highly rated.

For the years ended December 31, 2023 and 2022, the Company did not recognize any ineffectiveness on the hedging instruments.

The effective portion of the changes in fair value of the currency option and forward contracts for the years ended December 31, 2023 and 2022 recorded in accumulated other comprehensive (loss) income is:

	December 31, 2023	December 31, 2022
Balance, beginning of the period	($1.9)	$4.0
Change in value on currency instruments	18.1	(8.5)
Less: realized loss on CAD currency instruments	1.0	5.0
Less: realized gain on MXN currency instruments	(8.1)	(3.9)
Deferred income tax related to hedging instrument	(2.7)	1.5
	$6.4	**($1.9)**

The open contracts, which settle on a monthly basis, are summarized as at December 31, 2023:

Canadian dollar contracts:

Period Covered	Contract type	Contracts (CAD$ Millions)	Average minimum rate (USD/CAD)	Average maximum rate (USD/CAD)
2024	Collars	504.0	1.33	1.39

Mexican Peso contracts:

Period Covered	Contract type	Contracts (MXN Millions)	Average minimum rate (MXN/USD)	Average maximum rate (MXN/USD)
2024	Collars	330.0	18.14	20.53
2024	Forwards	125.0	17.77	17.77

As at December 31, 2023, the fair value of these contracts was an asset of $6.6 million (December 31, 2022 - liability of $4.3 million).

The effective portion of the changes in fair value of the fuel option contracts for the years ended December 31, 2023 and 2022 recorded in accumulated other comprehensive (loss) income is:

	December 31, 2023	December 31, 2022
Balance, beginning of the period	$0.1	$0.4
Change in value on fuel contracts	(0.2)	2.5
Less: realized gain on fuel contracts	—	(2.9)
Deferred income tax related to fuel contracts	—	0.1
	($0.1)	**$0.1**

As at December 31, 2023, the Company held contracts to protect against the risk of an increase in the price of fuel. These collars totalling 1,512,000 gallons, ensure a minimum purchase call option of $2.71 per gallon and a maximum average sold put options of $2.50 per gallon, regardless of the movement in fuel prices during 2024. The fair value of these contracts at December 31, 2023 was a $0.2 million liability (December 31, 2022 - $nil)

Derivative Instruments not designated as cash flow hedges

Gold option contracts

As at December 31, 2023, the Company held option contracts to protect against the risk of a decrease in the value of the gold price on a portion of gold sales. These option contracts totaling 69,750 ounces, ensure a minimum average realized gold price of $1,926 per ounce and a maximum average realized gold price of $2,356 per ounce, regardless of the movement in gold prices during 2024. The fair value of these contracts was a liability of $0.8 million at December 31, 2023 (December 31, 2022 - asset of $0.1 million). The options mature monthly throughout 2024.

For the year ended December 31, 2023, the Company realized losses of $0.1 million related to the settlement of option contracts (for the year ended December 31, 2022- realized gains of $3.5 million). Total unrealized losses for the year ended December 31, 2023 was $0.9 million (for the year ended December 31, 2022 - unrealized losses of $0.3 million). The Company has elected to not apply hedge accounting to the gold option contracts, with changes in fair value recorded in net earnings.

Financial instruments and related risks

In the normal course of operations, the Company is exposed to credit risk, liquidity risk and the following market risks: commodity price, market price, interest rate and foreign currency exchange rate. The Company has developed a risk management process to identify, analyze and assess these and other risks, and has formed a Risk Committee to monitor all significant risks to the Company. The Board of Directors has overall responsibility for the oversight of the Company's risk management framework, and receives regular reports from the Risk Committee.

Commodity price risk

The profitability of the Company's mining operations is significantly affected by changes in the market price for gold. Gold prices fluctuate on a daily basis and are affected by numerous factors beyond the Company's control. The supply and demand for gold, the level of interest rates, the rate of inflation, investment decisions by large holders of gold, including governmental reserves, and the stability of exchange rates can all cause significant fluctuations in gold prices. Such external economic factors are in turn influenced by changes in international investment patterns and monetary systems, and political developments. From time to time, the Company will enter into collars, options or other financial instruments to manage short term commodity price fluctuations.

For the year ended December 31, 2023, the Company's revenues and cash flows were impacted by gold prices fluctuating from a low of $,809 to a high of $2,090 per ounce. Metal price declines could cause the continued development of, and production from, the Company's properties to be uneconomic.

Interest rate risk

Interest rate risk is the risk that the fair value or the future cash flows of a financial instrument will fluctuate because of changes in market interest rates. All of the Company's outstanding debt obligations bear interest at fixed rates and are therefore not exposed to changes in future cash flows attributable to changes in market interest rates. The interest rate on the Facility is variable, however, the Facility was undrawn as at December 31, 2023.

The Company is exposed to interest rate risk on its cash and cash equivalents. The cash and cash equivalent interest earned is based on bank account interest rates which may fluctuate. A 100 basis point change in the interest rate would result in an increase or decrease of approximately $4.6 million in interest earned by the Company. The Company has not entered into any derivative contracts to manage this risk.

Foreign currency exchange rate risk

Metal sales revenues for the Company are denominated in US dollars. The Company is exposed to currency fluctuations relative to the US dollar on expenditures that are denominated in Canadian dollars and Mexican pesos. These potential currency fluctuations could have a significant impact on production costs and thereby, the profitability of the Company. The Company is also exposed to the impact of currency fluctuations on its monetary assets and liabilities.

A 10% strengthening or deterioration of these currencies against the US dollar at each balance sheet date would have resulted in a gain or loss recorded in net earnings by the amounts shown below. This analysis assumes that other variables, in particular interest rates, remain constant.

	December 31, 2023	December 31, 2022
Impact of a 10% change in foreign exchange rates		
Canadian dollar	$10.0	$3.6
Mexican peso	1.3	0.3

The currencies of the Company's financial instruments and other foreign currency denominated liabilities based on notional amounts, denominated in U.S dollar equivalents were as follows:

	Canadian Dollars		Mexican Peso	
	December 31, 2023	December 31, 2022	December 31, 2023	December 31, 2022
Cash and cash equivalents	$25.0	$21.6	$12.4	$4.1
Equity securities	13.0	18.6	—	—
Amounts receivable	14.9	16.6	38.6	21.5
Other monetary (liabilities) assets	(16.8)	9.8	(6.6)	(0.8)
Accounts payable and accrued liabilities	(124.1)	(102.7)	(16.4)	(19.3)
Income taxes payable	(0.1)	—	(40.2)	(0.7)
Total exposure to currency risk	(88.1)	(36.1)	(12.2)	4.8

Credit risk

Credit risk relates to receivables and other contracts, and arises from the possibility that any counterparty to an instrument fails to perform. For cash and cash equivalents, restricted cash, and receivables, the Company's credit risk is limited to the carrying amount on the balance sheet. The Company manages credit risk by transacting with highly-rated counterparties and establishing a limit on contingent exposure for each counterparty based on the counterparty's credit rating. Exposure on receivables is limited as the Company sells its products to a small number of organizations, on which the historical level of defaults is minimal.

The Company's maximum exposure to credit risk is as follows:

	December 31, 2023	December 31, 2022
Cash and cash equivalents	$224.8	$129.8
Milestone Payments	5.7	19.1
Derivative assets	6.6	—
Other receivables	5.5	4.6
Total financial instrument exposure to credit risk	**$242.6**	**$153.5**

Liquidity risk

Liquidity risk is the risk that the Company will encounter difficulty in meeting obligations associated with financial liabilities that are settled by delivering cash or another financial asset. The Company manages this risk through regular monitoring of its cash flow requirements to support ongoing operations and expansionary plans. The Company ensures that there are sufficient committed loan facilities to meet its business requirements, taking into account anticipated cash flows from operations and holdings of cash and cash equivalents.

The Company's future operating cash flow and cash position are highly dependent on gold prices, as well as other factors. Taking into consideration the Company's current cash position, volatile equity markets, and global uncertainty in the capital markets, the Company is continually reviewing expenditures and assessing business opportunities to enhance liquidity in order to ensure adequate liquidity and flexibility to support its growth strategy, including the development of its projects, while continuing production at its current operations. A period of continuously low gold prices may necessitate the deferral of capital expenditures which may impact the timing of development work and project completion, as well as production from mining operations. In addition, in such a price environment, the Company may be required to adopt one or more alternatives to increase liquidity.The Company ensures that there are sufficient committed loan facilities to meet its business requirements, taking into account anticipated cash flows from operations and holdings of cash and cash equivalents.

(a) Contractual commitments

The following table shows the maturities of contractual commitments. The amount presented represents the future undiscounted principal and interest cash flows, and therefore, do not equate to the carrying amounts on the consolidated statements of financial position.

	Less than 1 year	2 - 3 years	4 - 5 years	More than 5 years	Total
Leases	0.5	0.6	—	—	1.1
Accounts payable and accrued liabilities	195.0	—	—	—	195.0
Decommissioning liabilities	12.6	31.5	51.4	69.7	165.2
Capital commitments	87.5	32.7	—	—	120.2
	$295.6	**$64.8**	**$51.4**	**$69.7**	**$481.5**

Contractual obligations exist with respect to royalties (note 8); however, gold production subject to royalty cannot be ascertained with certainty and the royalty rate varies with the gold price, therefore have been excluded from the table.

The Company has a number of mining service contracts that are based on variable measures, and not fixed payments. These contracts include measures such as tonnes mined, or metres developed. The expense relating to these variable payments and recognized as an operating expense was $104.2 million (year ended December 31, 2022 - $88.2 million). Total cash outflow for leases amounted to $112.0 million for the year ended December 31, 2023 (2022 - payments of $96.1 million).

19. MANAGEMENT OF CAPITAL

The Company defines capital that it manages as its shareholders equity as well as debt and financing obligations. The Company's objectives when managing capital are to safeguard the Company's ability to continue as a going concern so that it can continue to provide returns for shareholders and benefits for other stakeholders. At December 31, 2023, total managed capital was $2,923.5 million (2022 - $2,721.1 million).

The Company's capital structure reflects the requirements of an entity focused on sustaining strong cash flows from its current mining operations and financing both internal and external growth opportunities and development projects. The Company faces lengthy development lead times as well as risks associated with increasing capital costs and project completion timing due to the availability of resources, permits and other factors beyond the Company's control. The Company's operations are also significantly affected by the volatility of the market price of gold.

The Company continually assesses its capital structure and makes adjustments to it with reference to changes in economic conditions and risk characteristics associated with its underlying assets. In order to maintain or adjust the capital structure, the Company may issue new shares, pay dividends, sell assets or enter into new debt arrangements.

The Company manages its capital structure by performing the following:

- Maintaining sufficient liquidity in order to address any potential operational disruptions or industry downturns;
- Preparing detailed budgets and cash flow forecasts for each mining operation, exploration project, development project and corporate activities that are approved by the Board of Directors;
- Regular internal reporting and Board of Directors' meetings to review actual versus budgeted spending and cash flows; and
- Detailed project financial analysis to assess or determine new funding requirements.

There were no changes in the Company's approach to managing capital during the year.

RELATED PARTY TRANSACTIONS

Remuneration of key management (includes the Company's directors and executive team) for the years ended:

Expense by nature for the years ended:	December 31, 2023	December 31, 2022
Short-term employee benefits	9.1	8.8
Share-based payments	16.6	8.7
	$25.7	**$17.5**

These transactions are in the normal course of operations and all of the transactions are measured at the exchange amount of consideration established and agreed to by the parties. The increase in share-based compensation expense for the year ended December 31, 2023, was primarily due to the Company's increased share price and higher relative total shareholder return performance.

21. SUBSEQUENT EVENT

Acquisiton of Orford Mining Corporation ("Orford")

On January 15, 2024, the Company announced that it had entered into a definitive agreement (the "Agreement") pursuant to which the Company will acquire all of the issued and outstanding shares of Orford by way of a court-approved plan of arrangement (the "Transaction"). Under the terms of the Agreement, Orford shareholders will receive 0.005588 of the Company's common shares for each Orford share, representing a value of C$0.10 per Orford share at the time of the announcement. The Company currently owns 61,660,902 Orford shares, representing approximately 27.5% of Orford's basic common shares outstanding. The Transaction is expected to close in April 2024.

CERTIFICATION PURSUANT TO RULE 13a-14 OR 15d-14 OF THE SECURITIES EXCHANGE ACT OF 1934, AS ADOPTED PURSUANT TO SECTION 302 OF THE SARBANES-OXLEY ACT OF 2002

I, John A. McCluskey, certify that:

1. I have reviewed this annual report on Form 40-F of Alamos Gold Inc.;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   (a) Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   (b) Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   (c) Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   (d) Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the period covered by the annual report that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the Audit Committee of the registrant's board of directors (or persons performing the equivalent functions):

   (a) All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

   (b) Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.
